500 Practice Questions — Learn · Practice · Quiz

> *“Every question here is a chance to check what you truly know.”*

| 500 | 200/200/100 |
| --- | --- |
| Questions | Easy / Medium / Advanced |

**Question 1**

**A public health campaign eliminates stagnant water across an entire town rather than treating dengue cases individually. What principle does this reflect?**

**A.** Tertiary prevention focused on individuals
**B.** Population-level primary prevention addressing a shared risk factor
**C.** A purely curative approach
**D.** An approach with no measurable public health value

**Correct Answer:** Option (B) — Population-level primary prevention addressing a shared risk factor

**Explanation:** *Addressing a shared environmental risk factor across a whole population is a hallmark of population-level primary prevention.*

**Question 2**

**Why might treating 'feeling fine' as equivalent to 'being healthy' be especially risky for hypertension-prone individuals?**

**A.** Hypertension always causes early, obvious symptoms
**B.** Hypertension often has no symptoms, so it can progress silently without regular checks
**C.** Hypertension is not linked to any serious complications
**D.** Feeling fine guarantees normal blood pressure

**Correct Answer:** Option (B) — Hypertension often has no symptoms, so it can progress silently without regular checks

**Explanation:** *Because hypertension frequently has no symptoms, relying on how one feels rather than screening can allow it to progress undetected.*

**Question 3**

**What does a 'vector-borne disease' mean?**

**A.** A disease passed only through water
**B.** A disease transmitted by a living organism such as a mosquito
**C.** A disease caused by poor diet
**D.** A hereditary disease

**Correct Answer:** Option (B) — A disease transmitted by a living organism such as a mosquito

**Explanation:** *A vector-borne disease is transmitted through a living organism, such as a mosquito, as seen in dengue or malaria.*

**Question 4**

**What is a key advantage of preventive healthcare compared to waiting until disease is advanced?**

**A.** Higher long-term treatment costs
**B.** Lower long-term costs and better quality of life
**C.** No difference in outcomes
**D.** Preventive care always takes longer

**Correct Answer:** Option (B) — Lower long-term costs and better quality of life

**Explanation:** *Preventive healthcare typically leads to lower long-term costs, earlier detection, and better overall quality of life.*

**Question 5**

**In India, which number connects a caller to unified emergency response, including police, fire, and medical help?**

**A.** 100
**B.** 112
**C.** 101
**D.** 102

**Correct Answer:** Option (B) — 112

**Explanation:** *112 is India's unified emergency number, connecting citizens to police, fire, and medical emergency services.*

**Question 6**

**How long should a person wash their hands with soap to effectively remove germs?**

**A.** 2 seconds
**B.** At least 20 seconds
**C.** 5 minutes
**D.** Only when visibly dirty

**Correct Answer:** Option (B) — At least 20 seconds

**Explanation:** *Washing hands with soap for at least 20 seconds, covering all surfaces, is the standard effective hygiene practice.*

**Question 7**

**How does the 'Chain of Survival' concept in general health thinking relate to the idea of interconnected prevention levels?**

**A.** It is unrelated to prevention entirely
**B.** Both emphasise that early action at each stage strongly influences the final outcome
**C.** It only applies to hospitals, not communities
**D.** It replaces the need for primary prevention

**Correct Answer:** Option (B) — Both emphasise that early action at each stage strongly influences the final outcome

**Explanation:** *Similar to prevention levels, frameworks like the Chain of Survival stress that early, appropriate action at each stage improves final outcomes.*

**Question 8**

**Why does India's National Health Policy, 2017 emphasise preventive and promotive healthcare?**

**A.** Because curative care is always cheaper
**B.** Because prevention is generally more cost-effective than treating advanced disease
**C.** Because it eliminates the need for hospitals
**D.** Because it only applies to rural areas

**Correct Answer:** Option (B) — Because prevention is generally more cost-effective than treating advanced disease

**Explanation:** *The policy prioritises prevention because catching or avoiding illness early is typically far less costly than treating advanced disease.*

**Question 9**

**Why does India's shift from mostly communicable to NCD-dominant deaths matter for public health planning?**

**A.** It suggests healthcare systems should stop focusing on vaccination entirely
**B.** It signals a need to balance infectious disease control with lifestyle disease prevention
**C.** It means communicable diseases are no longer a concern anywhere
**D.** It has no implications for government health policy

**Correct Answer:** Option (B) — It signals a need to balance infectious disease control with lifestyle disease prevention

**Explanation:** *Because both disease types remain relevant, health systems must balance continued infectious disease control with rising lifestyle disease prevention.*

**Question 10**

**Which of these best fits the 'about half the plate' portion in the Balanced Indian Thali model?**

**A.** Fried snacks
**B.** Vegetables and fruits
**C.** Sugary drinks
**D.** Refined oil

**Correct Answer:** Option (B) — Vegetables and fruits

**Explanation:** *The Balanced Indian Thali model recommends filling about half the plate with vegetables and fruits.*

**Question 11**

**Why is it inaccurate to say 'if I don't feel sick, I am completely healthy'?**

**A.** Because feeling unwell is always visible
**B.** Because health also includes mental and social well-being, which may be affected without physical symptoms
**C.** Because doctors always disagree with patients
**D.** Because illness is impossible to detect without lab tests

**Correct Answer:** Option (B) — Because health also includes mental and social well-being, which may be affected without physical symptoms

**Explanation:** *A person can feel physically fine yet still lack complete health if their mental or social well-being is compromised.*

**Question 12**

**What is the recommended amount of moderate physical activity for adults, according to general public health guidance?**

**A.** 10 minutes a week
**B.** 30 minutes on most days
**C.** 2 hours daily
**D.** Only on weekends

**Correct Answer:** Option (B) — 30 minutes on most days

**Explanation:** *Around 30 minutes of moderate activity, such as brisk walking, on most days is a standard general guideline for adults.*

**Question 13**

**What is the main idea behind describing health as a 'spectrum' rather than a fixed label?**

**A.** Health never changes once achieved
**B.** A person moves between wellness and illness depending on daily choices
**C.** Only doctors can judge someone's health
**D.** Health has no connection to daily habits

**Correct Answer:** Option (B) — A person moves between wellness and illness depending on daily choices

**Explanation:** *Viewing health as a spectrum reflects that daily choices continually shift a person between greater wellness and greater risk of illness.*

**Question 14**

**A citizen assumes that because their locality has clean water, personal hygiene practices like handwashing are no longer necessary. Why is this reasoning flawed?**

**A.** Clean water alone eliminates all disease transmission routes
**B.** Hygiene practices address multiple transmission routes beyond water alone, such as direct contact
**C.** Handwashing is only relevant in areas without clean water
**D.** Personal hygiene has no scientific basis

**Correct Answer:** Option (B) — Hygiene practices address multiple transmission routes beyond water alone, such as direct contact

**Explanation:** *Clean water reduces waterborne risk, but hygiene practices like handwashing address other transmission routes, such as direct contact, that water quality alone doesn't solve.*

**Question 15**

**A citizen wants to reduce their own long-term risk of NCDs using only free or low-cost actions. Which combination best reflects primary prevention?**

**A.** Waiting for symptoms, then visiting a specialist
**B.** Balanced diet, physical activity, and avoiding tobacco
**C.** Buying expensive supplements only
**D.** Ignoring family history entirely

**Correct Answer:** Option (B) — Balanced diet, physical activity, and avoiding tobacco

**Explanation:** *A balanced diet, regular activity, and avoiding tobacco are low-cost primary prevention actions that reduce long-term NCD risk.*

**Question 16**

**Which of the following is NOT one of the three core dimensions of health described by the WHO definition?**

**A.** Physical
**B.** Mental
**C.** Social
**D.** Financial

**Correct Answer:** Option (D) — Financial

**Explanation:** *The WHO definition of health centres on physical, mental, and social well-being — financial status is not one of these core dimensions.*

**Question 17**

**Why does the National Health Policy 2017 support Universal Health Coverage?**

**A.** To ensure citizens don't face financial hardship while accessing healthcare
**B.** To make all healthcare private
**C.** To eliminate government hospitals
**D.** To reduce the number of doctors in India

**Correct Answer:** Option (A) — To ensure citizens don't face financial hardship while accessing healthcare

**Explanation:** *Universal Health Coverage under the policy aims to ensure citizens can access healthcare without facing financial hardship.*

**Question 18**

**What is 'public health' primarily concerned with?**

**A.** Only treating wealthy individuals
**B.** Protecting and improving the health of entire communities
**C.** Selling private health insurance
**D.** Building luxury hospitals

**Correct Answer:** Option (B) — Protecting and improving the health of entire communities

**Explanation:** *Public health focuses on protecting and improving the health of whole communities, not just individual patients.*

**Question 19**

**Which of these is an example of a Non-Communicable Disease (NCD)?**

**A.** Dengue
**B.** Tuberculosis
**C.** Diabetes
**D.** Malaria

**Correct Answer:** Option (C) — Diabetes

**Explanation:** *Diabetes is a non-communicable disease, developing from lifestyle and genetic factors rather than spreading between people.*

**Question 20**

**What does eSanjeevani primarily provide to citizens?**

**A.** Free ambulance services
**B.** Online doctor consultations via telemedicine
**C.** Government job listings
**D.** Free school admissions

**Correct Answer:** Option (B) — Online doctor consultations via telemedicine

**Explanation:** *eSanjeevani is a national telemedicine platform that provides free online doctor consultations, especially valuable in rural areas.*

**Question 21**

**A person constantly relies on packaged, processed food due to a busy schedule. What is the most likely long-term health risk?**

**A.** Improved nutrition over time
**B.** Increased risk of lifestyle-related NCDs
**C.** Guaranteed weight loss
**D.** No health impact at all

**Correct Answer:** Option (B) — Increased risk of lifestyle-related NCDs

**Explanation:** *Frequent reliance on processed food, often high in salt, sugar, and unhealthy fats, raises long-term risk of NCDs like diabetes and hypertension.*

**Question 22**

**What is the National Health Mission (NHM) primarily responsible for?**

**A.** Only urban hospitals
**B.** Strengthening public healthcare infrastructure across India
**C.** Private hospital insurance
**D.** Only child vaccination

**Correct Answer:** Option (B) — Strengthening public healthcare infrastructure across India

**Explanation:** *The National Health Mission strengthens public healthcare infrastructure across both rural and urban India.*

**Question 23**

**Which statement best reflects the relationship between the three dimensions of health?**

**A.** They function completely independently of each other
**B.** Poor sleep, for example, can affect mood and relationships, showing they're interconnected
**C.** Only physical health matters in daily life
**D.** Mental health has no impact on physical health

**Correct Answer:** Option (B) — Poor sleep, for example, can affect mood and relationships, showing they're interconnected

**Explanation:** *The three dimensions are interconnected — for example, poor sleep (physical) can affect mood (mental) and relationships (social).*

**Question 24**

**What does the term 'preventive healthcare' mean?**

**A.** Treating a disease after symptoms appear
**B.** Actions taken to stop illness before it starts
**C.** Only visiting a hospital in an emergency
**D.** Buying health insurance

**Correct Answer:** Option (B) — Actions taken to stop illness before it starts

**Explanation:** *Preventive healthcare focuses on avoiding illness in advance, such as vaccination and healthy habits, rather than treating disease afterward.*

**Question 25**

**A factory worker eats fried snacks daily, rarely exercises, and has a family history of diabetes. Which type of disease is he at highest risk for?**

**A.** Communicable disease
**B.** Non-communicable disease
**C.** Vector-borne disease
**D.** Waterborne disease

**Correct Answer:** Option (B) — Non-communicable disease

**Explanation:** *His lifestyle pattern and family history point to elevated risk of a non-communicable disease such as diabetes.*

**Question 26**

**What is the toll-free number for Tele-MANAS, India's mental health helpline?**

**A.** 108
**B.** 112
**C.** 14416
**D.** 1098

**Correct Answer:** Option (C) — 14416

**Explanation:** *Tele-MANAS, the government's 24x7 mental health helpline, can be reached toll-free at 14416.*

**Question 27**

**Non-communicable diseases such as heart disease and diabetes are largely linked to which factor?**

**A.** Weather conditions only
**B.** Lifestyle factors such as diet and physical activity
**C.** Government policy alone
**D.** Random chance with no known cause

**Correct Answer:** Option (B) — Lifestyle factors such as diet and physical activity

**Explanation:** *NCDs are strongly linked to modifiable lifestyle factors including diet, physical activity, and tobacco or alcohol use.*

**Question 28**

**Which statement best reflects a myth about mental health corrected in general health awareness content?**

**A.** Mental health problems indicate personal weakness
**B.** Mental health conditions are medical conditions, not a sign of weakness
**C.** Only adults experience mental health concerns
**D.** Mental health has no connection to physical health

**Correct Answer:** Option (B) — Mental health conditions are medical conditions, not a sign of weakness

**Explanation:** *It is a myth that mental health struggles reflect weakness — they are recognised medical conditions that can affect anyone.*

**Question 29**

**What is the primary reason ABDM (Ayushman Bharat Digital Mission) issues citizens a digital health ID?**

**A.** To replace Aadhaar entirely
**B.** To securely store and share health records across providers
**C.** To provide free medicines automatically
**D.** To track citizens' financial transactions

**Correct Answer:** Option (B) — To securely store and share health records across providers

**Explanation:** *ABHA, the digital health ID under ABDM, lets citizens securely store and share their health records across different healthcare providers.*

**Question 30**

**Which of these habits is considered a daily healthy habit for preventing lifestyle diseases?**

**A.** Skipping meals frequently
**B.** Regular physical activity
**C.** Excessive tobacco use
**D.** Irregular sleep patterns

**Correct Answer:** Option (B) — Regular physical activity

**Explanation:** *Regular physical activity is one of the core daily habits that helps prevent lifestyle-related diseases such as diabetes.*

**Question 31**

**According to the World Health Organization, health is a state of complete physical, mental, and what other kind of well-being?**

**A.** Financial well-being
**B.** Social well-being
**C.** Spiritual well-being
**D.** Academic well-being

**Correct Answer:** Option (B) — Social well-being

**Explanation:** *WHO's 1948 definition defines health as complete physical, mental, and social well-being, not merely the absence of disease.*

**Question 32**

**What is the main purpose of the Swachh Bharat Mission in relation to health?**

**A.** Providing free medicines
**B.** Improving sanitation and hygiene to reduce disease
**C.** Building new hospitals
**D.** Training doctors

**Correct Answer:** Option (B) — Improving sanitation and hygiene to reduce disease

**Explanation:** *Swachh Bharat Mission focuses on improving sanitation and cleanliness, which reduces diseases linked to poor hygiene.*

**Question 33**

**A village reduces dengue cases significantly after removing stagnant water and using mosquito nets. What type of intervention is this?**

**A.** Tertiary prevention
**B.** A public health / primary prevention intervention
**C.** A curative treatment
**D.** An insurance-based intervention

**Correct Answer:** Option (B) — A public health / primary prevention intervention

**Explanation:** *Removing mosquito breeding sites is a primary prevention, community-level public health intervention that stops disease before it starts.*

**Question 34**

**What is one advantage of the Ayushman Bharat Health and Wellness Centres (Ayushman Arogya Mandirs)?**

**A.** They only serve urban populations
**B.** They offer free primary care and screening close to where people live
**C.** They replace the need for any hospital
**D.** They are only for senior citizens

**Correct Answer:** Option (B) — They offer free primary care and screening close to where people live

**Explanation:** *Ayushman Arogya Mandirs (Health and Wellness Centres) provide free primary care and screening conveniently close to citizens' homes.*

**Question 35**

**Which best explains why exercise benefits people of all body weights, not just those trying to lose weight?**

**A.** Exercise only affects visible body shape
**B.** Exercise supports heart health, mood, sleep, and immunity regardless of weight
**C.** Exercise has no measurable health benefits
**D.** Only underweight people benefit from exercise

**Correct Answer:** Option (B) — Exercise supports heart health, mood, sleep, and immunity regardless of weight

**Explanation:** *Physical activity benefits cardiovascular health, mental well-being, sleep quality, and immune function, independent of body weight.*

**Question 36**

**Ramesh has no physical illness but feels constantly anxious and isolated from friends. According to the WHO definition, is he fully healthy?**

**A.** Yes, since he has no physical illness
**B.** No, because social and mental well-being also matter
**C.** Yes, health only concerns the body
**D.** No, because he must be unemployed

**Correct Answer:** Option (B) — No, because social and mental well-being also matter

**Explanation:** *Health requires balance across physical, mental, and social well-being — physical wellness alone is not sufficient.*

**Question 37**

**What does the Mental Healthcare Act, 2017 recognise for every citizen?**

**A.** The right to free transportation
**B.** The right to access mental healthcare
**C.** The right to free higher education
**D.** The right to own agricultural land

**Correct Answer:** Option (B) — The right to access mental healthcare

**Explanation:** *The Mental Healthcare Act, 2017 recognises every citizen's right to access mental healthcare as part of India's broader health framework.*

**Question 38**

**Which best captures why 'Universal Health Coverage' and 'preventive healthcare' are described together in the National Health Policy 2017?**

**A.** They are unrelated government goals
**B.** Affordable access and early preventive action together reduce both financial and health burdens on citizens
**C.** UHC only concerns hospital construction
**D.** Preventive healthcare replaces the need for insurance entirely

**Correct Answer:** Option (B) — Affordable access and early preventive action together reduce both financial and health burdens on citizens

**Explanation:** *Affordable universal coverage paired with preventive care jointly reduces both the financial and health burden that citizens might otherwise face.*

**Question 39**

**Why is 'health' best understood as requiring balance across the body, mind, and relationships, rather than a single measurement?**

**A.** Because a single blood test can capture all aspects of health
**B.** Because different dimensions of well-being influence each other and overall quality of life
**C.** Because doctors only assess physical symptoms
**D.** Because mental and social factors are irrelevant to medical diagnosis

**Correct Answer:** Option (B) — Because different dimensions of well-being influence each other and overall quality of life

**Explanation:** *No single measurement fully captures health, since physical, mental, and social well-being interact and together shape overall quality of life.*

**Question 40**

**What is the key difference between primary and tertiary prevention?**

**A.** Primary prevention manages existing complications; tertiary prevents disease before onset
**B.** Primary prevention stops disease before it starts; tertiary manages disease and its complications
**C.** They are identical in practice
**D.** Tertiary prevention only applies to children

**Correct Answer:** Option (B) — Primary prevention stops disease before it starts; tertiary manages disease and its complications

**Explanation:** *Primary prevention acts before disease onset, while tertiary prevention manages an existing disease and reduces its complications.*

**Question 41**

**Why is antibiotic misuse considered a common mistake in the context of general health awareness?**

**A.** Antibiotics work equally well on all illnesses
**B.** It is only a concern for hospitals, not individuals
**C.** It has no long-term consequences
**D.** It is completely harmless if done occasionally

**Correct Answer:** Option (A) — Antibiotics work equally well on all illnesses

**Explanation:** *Misusing antibiotics (implied under general health mistakes) is a concern because inappropriate use contributes to resistance, though the direct concept tested here relates to the general principle of not self-medicating without cause.*

**Question 42**

**Which of these best explains why hand hygiene alone can reduce the spread of several diseases?**

**A.** It cures existing infections instantly
**B.** It breaks the chain of transmission by removing germs before they spread further
**C.** It replaces the need for vaccination
**D.** It only works against viruses, not bacteria

**Correct Answer:** Option (B) — It breaks the chain of transmission by removing germs before they spread further

**Explanation:** *Proper handwashing removes germs from the hands, interrupting one of the most common ways infections spread between people.*

**Question 43**

**Why might a person with no symptoms still be advised to get an annual health check-up?**

**A.** Check-ups are only for people who feel unwell
**B.** Many conditions like hypertension can exist without noticeable symptoms
**C.** It is legally required for all citizens
**D.** Check-ups have no real diagnostic value

**Correct Answer:** Option (B) — Many conditions like hypertension can exist without noticeable symptoms

**Explanation:** *Several lifestyle-related conditions can develop silently, which is why regular check-ups help catch issues even without symptoms.*

**Question 44**

**Which government scheme focuses specifically on reducing malnutrition among children and pregnant women?**

**A.** Poshan Abhiyaan
**B.** Swachh Bharat Mission
**C.** Digital India
**D.** Skill India

**Correct Answer:** Option (A) — Poshan Abhiyaan

**Explanation:** *Poshan Abhiyaan, India's National Nutrition Mission, targets malnutrition among children, adolescent girls, and pregnant and lactating women.*

**Question 45**

**A person feels physically fine but is constantly stressed and socially isolated. Under the WHO model, what does this suggest?**

**A.** They are completely healthy since there's no physical illness
**B.** Their overall health is incomplete despite physical wellness
**C.** Social isolation has no effect on health
**D.** Stress only affects physical health, not overall well-being

**Correct Answer:** Option (B) — Their overall health is incomplete despite physical wellness

**Explanation:** *Since health includes mental and social well-being, a person can be physically fine yet still have incomplete overall health.*

**Question 46**

**Which action reflects 'environmental hygiene' as described in personal hygiene basics?**

**A.** Brushing teeth twice daily
**B.** Keeping surroundings free of stagnant water and garbage
**C.** Wearing clean clothes
**D.** Trimming nails regularly

**Correct Answer:** Option (B) — Keeping surroundings free of stagnant water and garbage

**Explanation:** *Environmental hygiene involves keeping surroundings clean and free of stagnant water or garbage, which helps prevent disease-carrying vectors.*

**Question 47**

**Which level of prevention does an annual blood pressure and sugar check-up represent?**

**A.** Primary prevention
**B.** Secondary prevention
**C.** Tertiary prevention
**D.** No prevention at all

**Correct Answer:** Option (B) — Secondary prevention

**Explanation:** *Secondary prevention aims to catch a disease early, which is exactly what a routine screening check-up does.*

**Question 48**

**Which of the following is part of good personal hygiene?**

**A.** Sharing towels with others
**B.** Washing hands before eating
**C.** Drinking untreated water
**D.** Skipping regular bathing

**Correct Answer:** Option (B) — Washing hands before eating

**Explanation:** *Washing hands before eating is a fundamental personal hygiene practice that prevents the spread of infection.*

**Question 49**

**Why would a health awareness platform emphasise both government schemes and personal daily habits, rather than just one or the other?**

**A.** Because government schemes alone guarantee good health outcomes
**B.** Because sustainable health outcomes depend on both systemic support and individual daily choices
**C.** Because personal habits have no connection to health outcomes
**D.** Because schemes and habits address entirely unrelated concerns

**Correct Answer:** Option (B) — Because sustainable health outcomes depend on both systemic support and individual daily choices

**Explanation:** *Lasting health outcomes depend on both the systemic support that schemes provide and the daily choices individuals make.*

**Question 50**

**Which of these is a communicable disease?**

**A.** Hypertension
**B.** Malaria
**C.** Obesity
**D.** Diabetes

**Correct Answer:** Option (B) — Malaria

**Explanation:** *Malaria is a communicable, vector-borne disease spread through mosquito bites, unlike lifestyle-related NCDs.*

**Question 51**

**What is the first action to try when someone is choking but can still cough?**

**A.** Give abdominal thrusts immediately
**B.** Encourage them to keep coughing
**C.** Give them water to drink
**D.** Slap their back repeatedly

**Correct Answer:** Option (B) — Encourage them to keep coughing

**Explanation:** *If a choking person can still cough, encouraging continued coughing is often effective on its own before other measures are needed.*

**Question 52**

**Why should you never move someone with a suspected spinal injury unless there is immediate danger?**

**A.** Moving them always speeds up recovery
**B.** Incorrect movement can cause permanent damage to the spine
**C.** Spinal injuries are not serious
**D.** It is only a legal formality, not a medical concern

**Correct Answer:** Option (B) — Incorrect movement can cause permanent damage to the spine

**Explanation:** *Improper movement of someone with a suspected spinal injury can cause serious, sometimes permanent, damage.*

**Question 53**

**Why might 'assuming someone else has already called for help' be a dangerous mistake at an accident scene with several bystanders?**

**A.** Because emergency services always arrive without being called
**B.** Because in group situations, individuals may each assume another person made the call, causing critical delay
**C.** Because calling for help is never actually necessary
**D.** Because bystanders are legally forbidden from calling

**Correct Answer:** Option (B) — Because in group situations, individuals may each assume another person made the call, causing critical delay

**Explanation:** *In group settings, everyone may assume someone else called for help, leading to a dangerous delay unless a specific person is directed to call.*

**Question 54**

**Why does first aid training generally recommend calling for help before or while starting treatment, rather than after?**

**A.** Because professional help is rarely useful
**B.** Because earlier professional involvement generally improves outcomes in serious emergencies
**C.** Because it satisfies a purely bureaucratic requirement
**D.** Because first aid alone is always sufficient regardless of severity

**Correct Answer:** Option (B) — Because earlier professional involvement generally improves outcomes in serious emergencies

**Explanation:** *Calling for professional help early ensures advanced care arrives sooner, which generally improves outcomes in serious emergencies.*

**Question 55**

**What is the safest way to handle a suspected tourniquet situation for severe limb bleeding?**

**A.** Use it as the very first response to any bleeding
**B.** Use it only as a last resort when direct pressure fails
**C.** Never use a tourniquet under any circumstance
**D.** Apply it loosely for comfort

**Correct Answer:** Option (B) — Use it only as a last resort when direct pressure fails

**Explanation:** *A tourniquet should be a last resort for severe, life-threatening bleeding only, used after direct pressure has failed to control it.*

**Question 56**

**Why might a trained bystander choose to alternate back blows and abdominal thrusts rather than relying on just one technique for choking?**

**A.** Because one technique alone is always sufficient
**B.** Because alternating increases the chance of dislodging the obstruction if the first method doesn't work
**C.** Because it is required only for legal reasons
**D.** Because alternating techniques has no practical benefit

**Correct Answer:** Option (B) — Because alternating increases the chance of dislodging the obstruction if the first method doesn't work

**Explanation:** *Alternating techniques increases the overall chance of successfully dislodging an obstruction if the first method alone doesn't work.*

**Question 57**

**Why does the Good Samaritan Law specifically address hospital behaviour toward accident victims?**

**A.** To require hospitals to notify the media
**B.** To ensure hospitals provide emergency treatment without demanding payment or police clearance first
**C.** To let hospitals refuse emergency cases
**D.** To transfer legal liability entirely to hospitals

**Correct Answer:** Option (B) — To ensure hospitals provide emergency treatment without demanding payment or police clearance first

**Explanation:** *The law requires hospitals to treat accident victims immediately, without delaying care to demand payment or police clearance.*

**Question 58**

**What does the Good Samaritan Law in India protect a bystander from?**

**A.** Paying income tax
**B.** Civil or criminal liability for helping an accident victim in good faith
**C.** Losing their driving licence
**D.** Being asked to donate blood

**Correct Answer:** Option (B) — Civil or criminal liability for helping an accident victim in good faith

**Explanation:** *The Good Samaritan Law protects individuals who help accident victims in good faith from civil or criminal liability.*

**Question 59**

**A construction worker suffers a deep cut from a rusty tool. Beyond basic wound care, what additional step is important?**

**A.** No further action is needed once bleeding stops
**B.** Seeking medical attention due to infection and tetanus risk from a rusty object
**C.** Ignoring it if the bleeding has slowed
**D.** Applying only turmeric paste

**Correct Answer:** Option (B) — Seeking medical attention due to infection and tetanus risk from a rusty object

**Explanation:** *Wounds from rusty or dirty objects carry infection and tetanus risk, making medical follow-up important beyond basic first aid.*

**Question 60**

**Why is it incorrect to give an unconscious person water or food?**

**A.** It has no real risk at all
**B.** It can cause choking since they cannot swallow safely
**C.** It always speeds up recovery
**D.** It replaces the need for medical help

**Correct Answer:** Option (B) — It can cause choking since they cannot swallow safely

**Explanation:** *An unconscious person cannot swallow safely, so giving food or water risks choking rather than helping them.*

**Question 61**

**What does the 'R' in the RICE method for sprains stand for?**

**A.** Relax
**B.** Rest
**C.** Reduce
**D.** Recover

**Correct Answer:** Option (B) — Rest

**Explanation:** *RICE stands for Rest, Ice, Compression, Elevation — the standard first aid approach for sprains.*

**Question 62**

**What is the correct technique to dislodge an object from a choking adult who cannot speak or cough?**

**A.** Only back blows, never abdominal thrusts
**B.** Alternating back blows and abdominal thrusts
**C.** Giving them water immediately
**D.** Waiting without any intervention

**Correct Answer:** Option (B) — Alternating back blows and abdominal thrusts

**Explanation:** *Alternating 5 back blows and 5 abdominal thrusts (Heimlich manoeuvre) is the standard technique for a choking adult.*

**Question 63**

**What is the correct first step when you find someone who appears injured?**

**A.** Immediately move them to a hospital
**B.** Check that the scene is safe before approaching
**C.** Give them food and water
**D.** Call their family first

**Correct Answer:** Option (B) — Check that the scene is safe before approaching

**Explanation:** *Checking for danger first protects both the rescuer and the injured person before any further action is taken.*

**Question 64**

**What should you avoid doing during a nosebleed?**

**A.** Pinching the soft part of the nose
**B.** Leaning forward
**C.** Tilting the head backward
**D.** Applying a cold compress

**Correct Answer:** Option (C) — Tilting the head backward

**Explanation:** *Tilting the head backward during a nosebleed can cause blood to run down the throat, increasing choking or vomiting risk.*

**Question 65**

**Which of these is a myth about first aid for burns?**

**A.** Cool running water helps a burn
**B.** Applying butter soothes a burn
**C.** Loose, clean dressings protect a burn
**D.** Removing tight jewellery early helps

**Correct Answer:** Option (B) — Applying butter soothes a burn

**Explanation:** *Applying butter to a burn is a myth — it can trap heat and increase infection risk rather than helping.*

**Question 66**

**A colleague twists their ankle at work. Which combination reflects correct first aid?**

**A.** Heat, activity, compression, elevation
**B.** Rest, ice, compression, elevation
**C.** Rest, heat, massage, elevation
**D.** Ice only, with no rest or elevation

**Correct Answer:** Option (B) — Rest, ice, compression, elevation

**Explanation:** *RICE — Rest, Ice, Compression, Elevation — is the correct first aid combination for a sprain like a twisted ankle.*

**Question 67**

**Why does the Factories Act, 1948 require an ambulance room specifically when 500 or more workers are employed?**

**A.** Because larger workforces statistically face greater aggregate injury risk requiring more immediate on-site care
**B.** Because it is an arbitrary legal number with no practical basis
**C.** Because smaller factories never have injuries
**D.** Because ambulance rooms are decorative requirements only

**Correct Answer:** Option (A) — Because larger workforces statistically face greater aggregate injury risk requiring more immediate on-site care

**Explanation:** *Larger workplaces have proportionally greater aggregate injury risk, justifying dedicated on-site medical facilities like an ambulance room.*

**Question 68**

**What is the purpose of applying a splint to an injured limb?**

**A.** To realign the bone
**B.** To keep the injured limb still before moving the person
**C.** To reduce swelling instantly
**D.** To replace the need for medical care

**Correct Answer:** Option (B) — To keep the injured limb still before moving the person

**Explanation:** *A splint helps keep an injured limb still and supported, especially before or during transport to medical care.*

**Question 69**

**A person with a suspected fracture is also confused and drowsy after a fall. What does this combination suggest?**

**A.** No cause for additional concern
**B.** A possible head injury requiring urgent medical evaluation alongside the fracture
**C.** The fracture is definitely not serious
**D.** Only the fracture needs attention, not the confusion

**Correct Answer:** Option (B) — A possible head injury requiring urgent medical evaluation alongside the fracture

**Explanation:** *Confusion and drowsiness alongside a fall-related injury may indicate a head injury, requiring urgent evaluation beyond the fracture alone.*

**Question 70**

**A first responder correctly identifies that a person is not breathing normally and is unresponsive. What should happen next, following the DRSABC approach?**

**A.** Wait for the person to wake up naturally
**B.** Call for help and begin appropriate care such as CPR if trained
**C.** Give them water immediately
**D.** Leave them in the same position and walk away

**Correct Answer:** Option (B) — Call for help and begin appropriate care such as CPR if trained

**Explanation:** *Following DRSABC, an unresponsive person not breathing normally requires an emergency call and CPR if the rescuer is trained.*

**Question 71**

**A cyclist falls and scrapes their knee with light bleeding. What is the correct first aid sequence?**

**A.** Apply antiseptic first, then clean the wound
**B.** Clean hands, rinse the wound, apply antiseptic, then cover with a dressing
**C.** Cover it immediately without cleaning
**D.** Apply a tourniquet above the knee

**Correct Answer:** Option (B) — Clean hands, rinse the wound, apply antiseptic, then cover with a dressing

**Explanation:** *For a minor wound, the correct sequence is cleaning hands, rinsing the wound, applying antiseptic, then covering with a sterile dressing.*

**Question 72**

**Why does first aid guidance recommend that untrained bystanders avoid removing a large or deeply embedded object from a wound?**

**A.** Because embedded objects are never dangerous
**B.** Because the object may be helping control bleeding, and removal could worsen it
**C.** Because removing objects is always required immediately
**D.** Because wounds with embedded objects heal faster if left untouched with no other care

**Correct Answer:** Option (B) — Because the object may be helping control bleeding, and removal could worsen it

**Explanation:** *A large embedded object can be helping limit blood loss; removing it without proper care could worsen bleeding significantly.*

**Question 73**

**A person witnesses an accident, helps the victim, but chooses not to share their personal details. Is this permitted under the Good Samaritan Law?**

**A.** No, personal details must always be shared
**B.** Yes, the law allows the helper to remain anonymous if they choose
**C.** Only doctors are allowed anonymity
**D.** Yes, but only outside city limits

**Correct Answer:** Option (B) — Yes, the law allows the helper to remain anonymous if they choose

**Explanation:** *The Good Samaritan Law specifically allows a bystander who helps to choose not to disclose their personal details.*

**Question 74**

**A person incorrectly believes 'sharing an OTP is safe if done just once for verification' — how does this relate to broader safety awareness alongside first aid knowledge?**

**A.** It is unrelated to any safety principle
**B.** Both reflect the broader principle that a single lapse in a safety practice can still cause serious harm
**C.** OTP sharing is always harmless
**D.** First aid and digital safety share no common principles

**Correct Answer:** Option (B) — Both reflect the broader principle that a single lapse in a safety practice can still cause serious harm

**Explanation:** *Both examples reflect a shared safety principle: even a single lapse in an established safety practice can lead to serious harm.*

**Question 75**

**A person suffers a burn on their hand that appears white and charred. What should be done?**

**A.** Treat it at home with home remedies only
**B.** Seek immediate medical help
**C.** Wait 24 hours before deciding on treatment
**D.** Apply direct ice for an extended period

**Correct Answer:** Option (B) — Seek immediate medical help

**Explanation:** *A burn that looks white or charred is severe and requires immediate professional medical attention.*

**Question 76**

**A person collapses and appears unresponsive after choking. What should a bystander do?**

**A.** Wait for them to wake up on their own
**B.** Call emergency services and begin CPR if trained
**C.** Give them water to swallow
**D.** Leave them lying face up and walk away

**Correct Answer:** Option (B) — Call emergency services and begin CPR if trained

**Explanation:** *If a choking person becomes unconscious, calling emergency services immediately and beginning CPR if trained is the correct response.*

**Question 77**

**For a nosebleed, which position should the person take?**

**A.** Lean the head back
**B.** Lie flat on the back
**C.** Sit up and lean slightly forward
**D.** Stand upside down

**Correct Answer:** Option (C) — Sit up and lean slightly forward

**Explanation:** *Sitting up and leaning slightly forward prevents blood from running down the throat, unlike tilting the head back.*

**Question 78**

**Someone touches a hot pan and burns their fingers. Why is applying ice directly a mistake?**

**A.** Ice has no effect on burns at all
**B.** Ice can cause further tissue damage rather than helping
**C.** Ice is the medically recommended treatment
**D.** Ice speeds up healing significantly

**Correct Answer:** Option (B) — Ice can cause further tissue damage rather than helping

**Explanation:** *Direct ice application can worsen burn tissue damage; cool running water is the medically correct approach instead.*

**Question 79**

**Why is it recommended to note the time a tourniquet was applied?**

**A.** It has no medical relevance
**B.** It helps medical responders assess how long the limb has been without full blood flow
**C.** It is only useful for legal documentation
**D.** It determines how tightly to reapply it later

**Correct Answer:** Option (B) — It helps medical responders assess how long the limb has been without full blood flow

**Explanation:** *Recording the application time helps medical responders assess potential tissue damage from restricted blood flow duration.*

**Question 80**

**What does the PM RAHAT Scheme provide to road accident victims?**

**A.** Free vehicle repair
**B.** Cashless treatment during the Golden Hour
**C.** Free driving lessons
**D.** Legal defence in court

**Correct Answer:** Option (B) — Cashless treatment during the Golden Hour

**Explanation:** *The PM RAHAT Scheme provides cashless treatment, up to a set limit, for road accident victims during the critical Golden Hour.*

**Question 81**

**What does the 'D' in the DRSABC first aid approach stand for?**

**A.** Diagnosis
**B.** Danger
**C.** Direction
**D.** Delay

**Correct Answer:** Option (B) — Danger

**Explanation:** *The 'D' in DRSABC stands for Danger — checking the scene is safe before approaching an injured person.*

**Question 82**

**Why is timing important when responding to a suspected heart-related choking or breathing emergency in an elderly relative versus a younger adult?**

**A.** Age has no bearing on urgency
**B.** Elderly individuals may have less physiological reserve, making prompt action even more critical
**C.** Only younger adults require urgent first aid
**D.** Elderly individuals should always be treated last

**Correct Answer:** Option (B) — Elderly individuals may have less physiological reserve, making prompt action even more critical

**Explanation:** *Elderly individuals often have less physiological reserve to cope with emergencies, making prompt, correct first aid response especially critical.*

**Question 83**

**Which number should you call for an ambulance in most Indian states?**

**A.** 100
**B.** 101
**C.** 108
**D.** 1098

**Correct Answer:** Option (C) — 108

**Explanation:** *108 is the widely used ambulance emergency number in most Indian states, alongside 112 for unified emergency response.*

**Question 84**

**Why does treating cuts and wounds emphasise cleaning the wound only after bleeding has slowed, not before?**

**A.** Because cleaning has no real purpose
**B.** Because attempting to clean while actively bleeding heavily can interfere with stopping the bleeding first
**C.** Because cleaning should always happen before any pressure is applied
**D.** Because bleeding control is never a priority

**Correct Answer:** Option (B) — Because attempting to clean while actively bleeding heavily can interfere with stopping the bleeding first

**Explanation:** *Prioritising bleeding control first prevents interference with clot formation; cleaning is appropriate once bleeding has slowed.*

**Question 85**

**What should you do if a wound is deep, dirty, or won't stop bleeding after 10 minutes of pressure?**

**A.** Ignore it and continue daily activities
**B.** Seek medical help
**C.** Only apply a plaster and wait
**D.** Apply turmeric and cover it

**Correct Answer:** Option (B) — Seek medical help

**Explanation:** *A deep, dirty, or persistently bleeding wound needs medical attention beyond basic first aid.*

**Question 86**

**What is the correct way to cool a burn?**

**A.** Apply ice directly
**B.** Apply butter or toothpaste
**C.** Run cool water over it for at least 20 minutes
**D.** Cover it tightly with a bandage immediately

**Correct Answer:** Option (C) — Run cool water over it for at least 20 minutes

**Explanation:** *Cooling a burn under cool, running water for at least 20 minutes is the correct first aid response, unlike ice or home remedies.*

**Question 87**

**A person witnesses a road accident and is unsure whether helping could create legal trouble. What should reassure them under Indian law?**

**A.** There is no legal protection at all for bystanders
**B.** The Good Samaritan Law protects those who help in good faith from civil and criminal liability
**C.** Only doctors are protected, not ordinary citizens
**D.** Helping is only legal during daylight hours

**Correct Answer:** Option (B) — The Good Samaritan Law protects those who help in good faith from civil and criminal liability

**Explanation:** *The Good Samaritan Law specifically protects ordinary citizens who help accident victims in good faith from legal liability.*

**Question 88**

**A person's dressing becomes soaked with blood. What is the correct next step?**

**A.** Remove it and apply a fresh one immediately
**B.** Add more layers of dressing on top without removing the original
**C.** Leave the wound uncovered
**D.** Apply a tourniquet regardless of severity

**Correct Answer:** Option (B) — Add more layers of dressing on top without removing the original

**Explanation:** *Adding more layers on top, rather than removing a soaked dressing, helps maintain pressure and avoid disturbing clot formation.*

**Question 89**

**What should you do if you suspect someone has a broken bone?**

**A.** Try to straighten the limb
**B.** Keep it still and supported in the position found
**C.** Massage the area firmly
**D.** Ask them to walk on it

**Correct Answer:** Option (B) — Keep it still and supported in the position found

**Explanation:** *A suspected fracture should be kept still and supported, never realigned or forced into a different position.*

**Question 90**

**Why is 'do not attempt an unfamiliar procedure beyond basic first aid' considered good safety guidance for bystanders?**

**A.** Because bystanders should never help at all
**B.** Because attempting advanced procedures without training can cause more harm than good
**C.** Because professional training has no real value
**D.** Because basic first aid is never useful

**Correct Answer:** Option (B) — Because attempting advanced procedures without training can cause more harm than good

**Explanation:** *Attempting unfamiliar advanced procedures without training risks causing more harm, which is why staying within basic first aid is safer.*

**Question 91**

**Why is 'never share prescription medicines between family members' relevant to home first aid safety?**

**A.** Because medicines work identically for everyone
**B.** Because different individuals may need different dosages or have contraindications, making unsupervised sharing risky
**C.** Because sharing medicine is illegal in all cases
**D.** Because prescription medicines have no risk of misuse

**Correct Answer:** Option (B) — Because different individuals may need different dosages or have contraindications, making unsupervised sharing risky

**Explanation:** *Since medical needs and contraindications vary by individual, sharing prescription medicines without medical guidance carries real risk.*

**Question 92**

**What is the most appropriate action for a bystander who is untrained in first aid but witnesses a minor accident?**

**A.** Do nothing at all since they lack training
**B.** Call for emergency help and provide simple, safe support like reassurance or calling 108
**C.** Attempt advanced medical procedures regardless of training
**D.** Move the injured person immediately to their own vehicle

**Correct Answer:** Option (B) — Call for emergency help and provide simple, safe support like reassurance or calling 108

**Explanation:** *Even without formal training, calling for professional help and offering simple, safe support are valuable and appropriate actions.*

**Question 93**

**Which combination correctly reflects safe practice when treating a nosebleed that doesn't stop after 20–30 minutes?**

**A.** Continue home treatment indefinitely
**B.** Seek medical help, as this exceeds the typical safe home-treatment window
**C.** Tilt the head back further
**D.** Apply a tourniquet to the neck

**Correct Answer:** Option (B) — Seek medical help, as this exceeds the typical safe home-treatment window

**Explanation:** *A nosebleed lasting beyond 20–30 minutes despite correct first aid should prompt a visit to medical care.*

**Question 94**

**Under the Factories Act, 1948, how many workers require at least one first aid box?**

**A.** 50 workers
**B.** 100 workers
**C.** 150 workers
**D.** 500 workers

**Correct Answer:** Option (C) — 150 workers

**Explanation:** *The Factories Act, 1948 requires at least one first aid box for every 150 workers, under a trained person's charge.*

**Question 95**

**How should you control bleeding from a wound?**

**A.** Apply firm, direct pressure with a clean cloth
**B.** Rinse it and leave it uncovered
**C.** Apply ice directly to the wound
**D.** Wrap it as tightly as possible with wire

**Correct Answer:** Option (A) — Apply firm, direct pressure with a clean cloth

**Explanation:** *Firm, direct pressure with a clean cloth is the standard first step to control bleeding from a wound.*

**Question 96**

**What is a basic item that should be included in a first aid kit?**

**A.** A mobile charger
**B.** Sterile gauze pads
**C.** A kitchen knife
**D.** Cooking oil

**Correct Answer:** Option (B) — Sterile gauze pads

**Explanation:** *Sterile gauze pads are an essential first aid kit item used for dressing wounds.*

**Question 97**

**Should abdominal thrusts be used on an infant under 1 year who is choking?**

**A.** Yes, exactly as with adults
**B.** No, use gentle back blows and chest thrusts instead
**C.** Yes, but only with more force
**D.** No, no first aid should be given to infants

**Correct Answer:** Option (B) — No, use gentle back blows and chest thrusts instead

**Explanation:** *Abdominal thrusts should never be used on infants; gentle back blows and chest thrusts are the correct technique instead.*

**Question 98**

**What is the main reason bystanders often hesitate to help accident victims in India, according to first aid awareness content?**

**A.** Lack of interest in helping others
**B.** Fear of legal or procedural complications
**C.** Belief that accidents are not serious
**D.** Lack of any legal protection ever existing

**Correct Answer:** Option (B) — Fear of legal or procedural complications

**Explanation:** *Many bystanders historically hesitated due to fear of legal or procedural involvement, which the Good Samaritan Law was designed to remove.*

**Question 99**

**A person is bleeding heavily from a limb wound and direct pressure isn't controlling it. What is the appropriate escalation?**

**A.** Immediately amputate the limb
**B.** Consider a tourniquet as a last resort while awaiting emergency help
**C.** Stop all first aid attempts
**D.** Apply ice directly to stop the bleeding

**Correct Answer:** Option (B) — Consider a tourniquet as a last resort while awaiting emergency help

**Explanation:** *When direct pressure fails to control severe limb bleeding, a tourniquet becomes an appropriate last-resort measure while awaiting help.*

**Question 100**

**Why is keeping a first aid kit updated every few months considered a best practice rather than a one-time task?**

**A.** Kits never expire or need replacement
**B.** Items like antiseptics and adhesives can expire or be used up over time
**C.** It is only a formality with no practical value
**D.** Kits should be replaced entirely every week

**Correct Answer:** Option (B) — Items like antiseptics and adhesives can expire or be used up over time

**Explanation:** *Since items like antiseptics and adhesive dressings can expire or run out, regular review keeps the kit genuinely ready for use.*

**Question 101**

**A person shows signs of both a seizure and has known diabetes. Why does this combination increase the urgency of calling for help?**

**A.** Because diabetes is never linked to seizures

**B.** Because a seizure in a known diabetic patient specifically warrants emergency evaluation, per general first aid guidance

**C.** Because seizures in diabetics are always harmless

**D.** Because only non-diabetics require emergency care during a seizure

**Correct Answer:** Option (B) — Because a seizure in a known diabetic patient specifically warrants emergency evaluation, per general first aid guidance

**Explanation:** *General first aid guidance specifically flags seizures in a known diabetic patient as warranting emergency evaluation, given the possible link to blood sugar.*

**Question 102**

**What is the first link in the 'Chain of Survival' for cardiac arrest?**

**A.** Early advanced care

**B.** Early recognition and calling for help

**C.** Early defibrillation

**D.** Post-arrest recovery care

**Correct Answer:** Option (B) — Early recognition and calling for help

**Explanation:** *Early recognition of the emergency and calling for help is the first link in the Chain of Survival.*

**Question 103**

**Why does emergency guidance recommend keeping the poison's container or packaging when calling for help?**

**A.** It has no practical value

**B.** It helps responders quickly identify the substance and determine appropriate treatment

**C.** It is only needed for later disposal

**D.** Containers are never relevant to treatment decisions

**Correct Answer:** Option (B) — It helps responders quickly identify the substance and determine appropriate treatment

**Explanation:** *Having the container available helps responders quickly identify the substance involved, which directly informs treatment decisions.*

**Question 104**

**What is the purpose of 'hands-only' CPR for untrained bystanders?**

**A.** It replaces the need for emergency services

**B.** It simplifies CPR to make it easier to perform correctly without rescue-breath training

**C.** It is only symbolic and not medically effective

**D.** It should only be done by doctors

**Correct Answer:** Option (B) — It simplifies CPR to make it easier to perform correctly without rescue-breath training

**Explanation:** *Hands-only CPR removes the need for rescue-breath training, making it simpler for untrained bystanders to perform effectively.*

**Question 105**

**Why is 'assume it's low blood sugar if unsure' considered reasonable general guidance for a conscious person with diabetes showing confusion?**

**A.** Because high blood sugar is more immediately dangerous

**B.** Because low blood sugar is generally the more immediately dangerous condition, and a small amount of sugar is unlikely to cause harm if wrong

**C.** Because sugar has no physiological effect either way

**D.** Because diabetes never causes confusion

**Correct Answer:** Option (B) — Because low blood sugar is generally the more immediately dangerous condition, and a small amount of sugar is unlikely to cause harm if wrong

**Explanation:** *Low blood sugar is generally more urgently dangerous, and giving a small amount of sugar poses little risk even if the actual cause turns out to be different.*

**Question 106**

**What should you do if someone with a known severe allergy has their own adrenaline auto-injector?**

**A.** Avoid touching it under any circumstance
**B.** Help them use it as directed
**C.** Use your own medication instead
**D.** Wait for a doctor to arrive before doing anything

**Correct Answer:** Option (B) — Help them use it as directed

**Explanation:** *Helping the person use their own prescribed auto-injector as directed is the correct action during a severe allergic reaction.*

**Question 107**

**Why is understanding the 'Chain of Survival' useful even for citizens who are not medically trained?**

**A.** Because only medical professionals need to understand any part of it
**B.** Because the first two links — recognition and calling for help, and starting CPR — are explicitly within any bystander's reach
**C.** Because untrained citizens have no meaningful role in the chain
**D.** Because the concept only applies inside hospitals

**Correct Answer:** Option (B) — Because the first two links — recognition and calling for help, and starting CPR — are explicitly within any bystander's reach

**Explanation:** *The first two links of the Chain of Survival are specifically within a bystander's ability to perform, making the concept broadly relevant.*

**Question 108**

**What is the toll-free number for India's National Poisons Information Centre?**

**A.** 108
**B.** 112
**C.** 1800-116-117
**D.** 1098

**Correct Answer:** Option (C) — 1800-116-117

**Explanation:** *The National Poisons Information Centre, based at AIIMS, can be reached toll-free at 1800-116-117.*

**Question 109**

**What does an AED do?**

**A.** Measures blood pressure
**B.** Delivers a controlled electric shock to restore normal heart rhythm
**C.** Provides oxygen through a mask
**D.** Monitors blood sugar levels

**Correct Answer:** Option (B) — Delivers a controlled electric shock to restore normal heart rhythm

**Explanation:** *An Automated External Defibrillator (AED) can deliver a controlled shock to help restore a normal heart rhythm.*

**Question 110**

**What should you do first if you suspect someone is having a heart attack?**

**A.** Wait to see if symptoms pass
**B.** Call emergency services immediately
**C.** Give them a large meal
**D.** Ask them to exercise lightly

**Correct Answer:** Option (B) — Call emergency services immediately

**Explanation:** *Calling emergency services immediately is the correct first response to suspected heart attack symptoms.*

**Question 111**

**What is anaphylaxis?**

**A.** A mild skin rash
**B.** A severe, rapid, life-threatening allergic reaction
**C.** A common cold symptom
**D.** A type of headache

**Correct Answer:** Option (B) — A severe, rapid, life-threatening allergic reaction

**Explanation:** *Anaphylaxis is a severe and rapid allergic reaction that can become life-threatening within minutes.*

**Question 112**

**What is the correct hand position for hands-only CPR?**

**A.** On the person's stomach
**B.** On the centre of the chest, one hand on top of the other
**C.** On the person's throat
**D.** On the person's forehead

**Correct Answer:** Option (B) — On the centre of the chest, one hand on top of the other

**Explanation:** *The heel of one hand placed on the centre of the chest, with the other hand on top, is the correct CPR hand position.*

**Question 113**

**Why does anaphylaxis sometimes require a second dose of adrenaline from an auto-injector?**

**A.** Because the first dose is always ineffective
**B.** Because symptoms can return or persist if the initial dose isn't sufficient, especially before further help arrives
**C.** Because a second dose is a routine step regardless of symptoms
**D.** Because auto-injectors are designed to be used only in pairs

**Correct Answer:** Option (B) — Because symptoms can return or persist if the initial dose isn't sufficient, especially before further help arrives

**Explanation:** *If symptoms don't improve or return, a second dose may be needed while waiting for further medical help to arrive.*

**Question 114**

**What is a common sign of low blood sugar (hypoglycaemia)?**

**A.** High energy and alertness
**B.** Shakiness, sweating, and confusion
**C.** Loud, clear speech
**D.** Excessive thirst only

**Correct Answer:** Option (B) — Shakiness, sweating, and confusion

**Explanation:** *Shakiness, sweating, and confusion are common signs of low blood sugar, requiring prompt attention if the person is conscious.*

**Question 115**

**What is cardiac arrest?**

**A.** A blocked artery causing chest pain
**B.** The heart suddenly stopping effective pumping, with the person unresponsive and not breathing normally
**C.** A minor irregular heartbeat with no symptoms
**D.** A type of stroke

**Correct Answer:** Option (B) — The heart suddenly stopping effective pumping, with the person unresponsive and not breathing normally

**Explanation:** *Cardiac arrest occurs when the heart suddenly stops pumping effectively, leaving the person unresponsive and not breathing normally.*

**Question 116**

**What does the 'F' in the FAST stroke test stand for?**

**A.** Fear
**B.** Face
**C.** Fever
**D.** Fluid

**Correct Answer:** Option (B) — Face

**Explanation:** *FAST stands for Face, Arms, Speech, Time — a quick way to recognise possible stroke symptoms.*

**Question 117**

**Why might witnessing a first cardiac arrest make a bystander hesitant, and how does hands-only CPR address this?**

**A.** Hands-only CPR requires more complex training, increasing hesitation
**B.** Hands-only CPR was specifically simplified to reduce the barrier of complex technique, making bystanders more likely to act
**C.** Hesitation is unrelated to technique complexity
**D.** Hands-only CPR was designed to discourage bystander involvement

**Correct Answer:** Option (B) — Hands-only CPR was specifically simplified to reduce the barrier of complex technique, making bystanders more likely to act

**Explanation:** *By simplifying the technique to compressions only, hands-only CPR reduces the complexity barrier that might otherwise cause hesitation.*

**Question 118**

**Should you try to make someone vomit after a suspected poisoning?**

**A.** Yes, always, immediately
**B.** No, not unless instructed by a poison control expert or medical professional
**C.** Yes, but only with warm water
**D.** No first aid should ever be given for poisoning

**Correct Answer:** Option (B) — No, not unless instructed by a poison control expert or medical professional

**Explanation:** *Inducing vomiting is not recommended for most poisonings unless specifically instructed by a poison control expert or doctor.*

**Question 119**

**Why is 'do not restrain a person having a seizure' important safety guidance?**

**A.** Because restraint has no risk at all
**B.** Because restraint can cause injury without stopping the seizure itself
**C.** Because seizures always stop faster with restraint
**D.** Because it is only a legal formality

**Correct Answer:** Option (B) — Because restraint can cause injury without stopping the seizure itself

**Explanation:** *Restraining someone during a seizure doesn't stop it and can cause injury to both the person and the helper.*

**Question 120**

**Why might 'waiting to see if chest pain goes away' be more dangerous than it seems?**

**A.** Because chest pain always resolves harmlessly on its own
**B.** Because early treatment window for heart attacks can be lost while waiting, worsening outcomes
**C.** Because chest pain has no connection to heart health
**D.** Because waiting has no measurable effect on outcomes

**Correct Answer:** Option (B) — Because early treatment window for heart attacks can be lost while waiting, worsening outcomes

**Explanation:** *Delaying care while waiting for chest pain to pass can cause the loss of a critical early treatment window, worsening potential outcomes.*

**Question 121**

**Why is 'Time' included in the FAST stroke test?**

**A.** Because stroke treatment is only effective within a limited time window
**B.** Because time has no real relevance to stroke care
**C.** Because it refers to the time of day only
**D.** Because it reminds bystanders to check their watches for fun

**Correct Answer:** Option (A) — Because stroke treatment is only effective within a limited time window

**Explanation:** *Certain stroke treatments are only effective within a limited window from symptom onset, making time critically important.*

**Question 122**

**A person shows signs of a severe allergic reaction but has no known allergies or auto-injector. What should a bystander prioritise?**

**A.** Waiting to see if symptoms worsen before acting
**B.** Calling emergency services immediately regardless of a known auto-injector
**C.** Giving them an antihistamine tablet from a stranger
**D.** Assuming it isn't serious without a diagnosis history

**Correct Answer:** Option (B) — Calling emergency services immediately regardless of a known auto-injector

**Explanation:** *Even without a known history or auto-injector, calling emergency services immediately is critical since anaphylaxis can worsen rapidly.*

**Question 123**

**What should you give a conscious person experiencing low blood sugar?**

**A.** Only water
**B.** Something sugary, like glucose or juice
**C.** Insulin
**D.** Nothing at all

**Correct Answer:** Option (B) — Something sugary, like glucose or juice

**Explanation:** *If conscious and able to swallow, giving something sugary is the appropriate first response to suspected low blood sugar.*

**Question 124**

**A person becomes confused, cannot lift one arm fully, and has slurred speech. What is the most appropriate action?**

**A.** Wait an hour to see if it resolves
**B.** Call emergency services immediately and note the time symptoms began
**C.** Give them coffee to help them focus
**D.** Encourage them to walk it off

**Correct Answer:** Option (B) — Call emergency services immediately and note the time symptoms began

**Explanation:** *These symptoms strongly suggest a stroke — immediate emergency care and noting the exact onset time are critical.*

**Question 125**

**Why is 'chain of survival' framed as a chain rather than a single action?**

**A.** Because only one link actually matters in practice
**B.** Because survival depends on multiple sequential actions, and a weak or missing link reduces the chance of survival
**C.** Because it is simply a marketing term with no real meaning
**D.** Because each link works completely independently of the others

**Correct Answer:** Option (B) — Because survival depends on multiple sequential actions, and a weak or missing link reduces the chance of survival

**Explanation:** *The chain metaphor reflects that survival depends on several sequential actions — recognition, CPR, defibrillation, and advanced care — each influencing the outcome.*

**Question 126**

**Why is it important to inform emergency responders about a possible poisoning substance, even if unsure of the exact one?**

**A.** It has no bearing on treatment decisions
**B.** It can help responders choose the safest and most effective treatment approach
**C.** Only the substance's brand name matters, not its type
**D.** Responders never need this information

**Correct Answer:** Option (B) — It can help responders choose the safest and most effective treatment approach

**Explanation:** *Even partial information about a possible poisoning substance can help responders choose the safest and most effective treatment.*

**Question 127**

**When calling emergency services, what information should you provide clearly?**

**A.** Only your own name
**B.** Your exact location and the nature of the emergency
**C.** Your favourite hospital preference only
**D.** Nothing, and wait for them to ask everything

**Correct Answer:** Option (B) — Your exact location and the nature of the emergency

**Explanation:** *Clearly stating your exact location and the nature of the emergency helps responders act quickly and appropriately.*

**Question 128**

**Why might a family member with diabetes be treated differently from someone with no known condition during a confusion episode?**

**A.** Diabetes has no relevance to confusion episodes
**B.** Their confusion could stem from a treatable blood sugar issue, which should be considered first
**C.** Diabetic individuals should never receive first aid
**D.** Confusion always requires the same generic response regardless of history

**Correct Answer:** Option (B) — Their confusion could stem from a treatable blood sugar issue, which should be considered first

**Explanation:** *Knowing someone has diabetes helps responders consider blood sugar imbalance as a likely, treatable cause of sudden confusion.*

**Question 129**

**Which of these is a warning sign of stroke under the FAST test?**

**A.** Slight hunger
**B.** One side of the face drooping
**C.** Mild tiredness
**D.** Occasional yawning

**Correct Answer:** Option (B) — One side of the face drooping

**Explanation:** *One side of the face drooping is a classic FAST warning sign that may indicate a stroke.*

**Question 130**

**What is the key difference between a heart attack and cardiac arrest?**

**A.** They are exactly the same condition
**B.** A heart attack is a blocked blood supply to the heart muscle, while cardiac arrest is the heart stopping altogether
**C.** Cardiac arrest is always less serious
**D.** A heart attack always causes unconsciousness immediately

**Correct Answer:** Option (B) — A heart attack is a blocked blood supply to the heart muscle, while cardiac arrest is the heart stopping altogether

**Explanation:** *A heart attack involves blocked blood flow to heart muscle, while cardiac arrest is the heart stopping effective pumping entirely, causing unresponsiveness.*

**Question 131**

**Why is 'never give an unconscious person anything by mouth' a consistent principle across choking, poisoning, and stroke first aid?**

**A.** Because this rule only applies to poisoning cases
**B.** Because an unconscious person cannot safely swallow, creating a shared choking risk across all these situations
**C.** Because it is a legal requirement rather than a safety concern
**D.** Because consciousness has no bearing on swallowing safety

**Correct Answer:** Option (B) — Because an unconscious person cannot safely swallow, creating a shared choking risk across all these situations

**Explanation:** *Across all these situations, an unconscious person's inability to swallow safely creates a consistent, shared choking risk if given anything by mouth.*

**Question 132**

**A person is unconscious but breathing normally after a fall. What is the appropriate positioning while awaiting help?**

**A.** Sitting fully upright
**B.** Lying flat on their back with no adjustment
**C.** A stable side-lying (recovery) position to keep the airway clear
**D.** Standing them upright with support

**Correct Answer:** Option (C) — A stable side-lying (recovery) position to keep the airway clear

**Explanation:** *A stable side-lying recovery position helps keep the airway clear in an unconscious but breathing person.*

**Question 133**

**What should you avoid giving a person showing signs of stroke?**

**A.** Reassurance
**B.** Food or water by mouth
**C.** A phone call to emergency services
**D.** A calm environment

**Correct Answer:** Option (B) — Food or water by mouth

**Explanation:** *Food or water should not be given, since stroke can impair the ability to swallow safely, risking choking.*

**Question 134**

**What should you never do during a seizure?**

**A.** Time how long it lasts
**B.** Put something in the person's mouth
**C.** Turn them onto their side afterward
**D.** Stay with them until they recover

**Correct Answer:** Option (B) — Put something in the person's mouth

**Explanation:** *Putting an object in the mouth during a seizure is dangerous and based on an outdated myth — it should never be done.*

**Question 135**

**A person with no known allergies suddenly develops hives and mild swelling after eating a new food, but is breathing normally. What is the most appropriate response?**

**A.** Ignore it completely since breathing is normal
**B.** Monitor closely, seek medical advice, and be ready to act quickly if symptoms worsen toward anaphylaxis
**C.** Immediately perform CPR regardless of consciousness
**D.** Assume no allergic reaction is occurring at all

**Correct Answer:** Option (B) — Monitor closely, seek medical advice, and be ready to act quickly if symptoms worsen toward anaphylaxis

**Explanation:** *Even without severe symptoms yet, monitoring closely and being ready to act is appropriate since reactions can escalate quickly.*

**Question 136**

**Why does general emergency guidance recommend staying on the phone line with a dispatcher rather than hanging up once help is requested?**

**A.** Because dispatchers require payment confirmation before ending calls
**B.** Because dispatchers can continue guiding the caller through helpful actions until responders arrive
**C.** Because staying on the line is only a formality with no real benefit
**D.** Because hanging up automatically cancels the emergency request

**Correct Answer:** Option (B) — Because dispatchers can continue guiding the caller through helpful actions until responders arrive

**Explanation:** *Dispatchers can continue providing valuable real-time guidance, such as CPR instructions, until professional responders take over.*

**Question 137**

**A bystander is unsure whether a collapsed person is in cardiac arrest or has simply fainted. What is the safest approach?**

**A.** Assume it's fainting and do nothing further
**B.** Check responsiveness and breathing; call for help and begin CPR if not breathing normally
**C.** Wait 10 minutes before checking anything
**D.** Immediately give them food or water

**Correct Answer:** Option (B) — Check responsiveness and breathing; call for help and begin CPR if not breathing normally

**Explanation:** *Checking responsiveness and breathing clarifies the situation; if breathing isn't normal, calling for help and starting CPR is essential.*

**Question 138**

**A person having a seizure is lying near a busy road. What is the correct balance of action?**

**A.** Never move them under any circumstance, even near danger
**B.** Move them only enough to remove them from immediate danger, otherwise let the seizure run its course
**C.** Restrain them fully until it stops
**D.** Leave them exactly where they are regardless of danger

**Correct Answer:** Option (B) — Move them only enough to remove them from immediate danger, otherwise let the seizure run its course

**Explanation:** *If there is immediate danger (like traffic), moving the person minimally to safety is appropriate; otherwise, avoid restraint and let the seizure pass.*

**Question 139**

**What is the first thing to do if someone is having a seizure?**

**A.** Restrain their movements
**B.** Put an object in their mouth
**C.** Clear the area of nearby objects and protect their head
**D.** Give them water immediately

**Correct Answer:** Option (C) — Clear the area of nearby objects and protect their head

**Explanation:** *Clearing the area of hazards and cushioning the head is the correct first response, rather than restraining or inserting objects.*

**Question 140**

**Someone collapses and is not breathing normally. A bystander is untrained in CPR. What should they do?**

**A.** Do nothing since they lack training
**B.** Call emergency services and follow the dispatcher's guidance, including hands-only CPR if instructed
**C.** Wait for a trained person to pass by
**D.** Leave the person and inform someone later

**Correct Answer:** Option (B) — Call emergency services and follow the dispatcher's guidance, including hands-only CPR if instructed

**Explanation:** *Calling emergency services allows dispatchers to guide even untrained bystanders through hands-only CPR over the phone.*

**Question 141**

**What is the recommended rate of chest compressions during hands-only CPR?**

**A.** 40–60 per minute
**B.** 100–120 per minute
**C.** 150–180 per minute
**D.** Once every 10 seconds

**Correct Answer:** Option (B) — 100–120 per minute

**Explanation:** *Hands-only CPR should be performed at a rate of about 100 to 120 compressions per minute.*

**Question 142**

**Why does hands-only CPR emphasise allowing the chest to fully rise between compressions?**

**A.** It has no real effect on outcomes
**B.** Full chest recoil allows the heart to refill with blood before the next compression
**C.** It only matters for comfort, not effectiveness
**D.** It should be skipped to save time

**Correct Answer:** Option (B) — Full chest recoil allows the heart to refill with blood before the next compression

**Explanation:** *Allowing full chest recoil lets the heart refill with blood between compressions, which is important for effective CPR.*

**Question 143**

**A person recovers consciousness quickly after a brief faint with no injury or other symptoms. What is the appropriate next step?**

**A.** Immediately call emergency services regardless of recovery
**B.** Help them rest, rise slowly, and monitor for repeat episodes or other symptoms
**C.** Assume no further attention is ever needed
**D.** Give them a strenuous task to test their recovery

**Correct Answer:** Option (B) — Help them rest, rise slowly, and monitor for repeat episodes or other symptoms

**Explanation:** *A quick, uncomplicated recovery still warrants gentle monitoring and slow movement, watching for repeat fainting or other concerning symptoms.*

**Question 144**

**Why is 'no Indian law enforcement agency arrests or fines via video call' relevant general safety awareness alongside medical emergency knowledge?**

**A.** It is unrelated to medical emergencies entirely
**B.** Both reflect the importance of recognising red flags and not panicking into harmful action under pressure
**C.** Because video calls are illegal in India
**D.** Because this specifically applies only to medical scams

**Correct Answer:** Option (B) — Both reflect the importance of recognising red flags and not panicking into harmful action under pressure

**Explanation:** *Both areas emphasise staying calm, recognising red flags, and avoiding panicked, harmful decisions under pressure, whether medical or fraud-related.*

**Question 145**

**Why does general emergency guidance recommend noting the exact time symptoms began for both stroke and poisoning cases?**

**A.** Because timing is irrelevant to either condition
**B.** Because time elapsed can directly affect available treatment options in both situations
**C.** Because it is only useful for insurance paperwork
**D.** Because only poisoning cases require time tracking

**Correct Answer:** Option (B) — Because time elapsed can directly affect available treatment options in both situations

**Explanation:** *In both stroke and poisoning, elapsed time can significantly affect which treatments are still viable, making it valuable information.*

**Question 146**

**Why might bystander CPR rates remain low in some regions despite public awareness campaigns?**

**A.** Because CPR is completely ineffective
**B.** Because fear of doing it incorrectly or legal concerns can cause hesitation despite awareness
**C.** Because most people are unaware cardiac arrest exists
**D.** Because CPR training is banned in most areas

**Correct Answer:** Option (B) — Because fear of doing it incorrectly or legal concerns can cause hesitation despite awareness

**Explanation:** *Even with awareness, fear of performing CPR incorrectly or facing legal issues can cause hesitation, which is part of why rates stay low.*

**Question 147**

**What should you do if someone faints?**

**A.** Keep them standing upright
**B.** Help them lie down and raise their legs
**C.** Give them a hot drink immediately
**D.** Slap them to wake them up

**Correct Answer:** Option (B) — Help them lie down and raise their legs

**Explanation:** *Helping a fainting person lie down and raising their legs supports blood flow back to the brain.*

**Question 148**

**A person is stung by a bee and rapidly develops facial swelling and difficulty breathing. What is happening, and what should be done?**

**A.** A mild reaction; no action needed
**B.** Possible anaphylaxis; call emergency services and assist with their auto-injector if they have one
**C.** A common cold; give them tea
**D.** A stroke; perform CPR immediately

**Correct Answer:** Option (B) — Possible anaphylaxis; call emergency services and assist with their auto-injector if they have one

**Explanation:** *Rapid facial swelling and breathing difficulty after a sting suggest anaphylaxis, requiring emergency care and auto-injector assistance if available.*

**Question 149**

**Why might a person with a suspected heart attack be advised to chew aspirin only if instructed by a dispatcher, rather than automatically?**

**A.** Because aspirin has no relevant effect on heart attacks at all
**B.** Because individual factors like allergies mean this decision should follow professional guidance rather than a blanket rule
**C.** Because aspirin is illegal without a prescription
**D.** Because dispatchers never provide medical guidance over the phone

**Correct Answer:** Option (B) — Because individual factors like allergies mean this decision should follow professional guidance rather than a blanket rule

**Explanation:** *Following the dispatcher's specific guidance accounts for individual factors like allergies, making it safer than a blanket recommendation.*

**Question 150**

**Why is 'Time' arguably the most universally critical factor across cardiac arrest, stroke, and severe allergic reactions?**

**A.** Because none of these conditions are actually time-sensitive
**B.** Because outcomes in all three are strongly influenced by how quickly appropriate care begins
**C.** Because time only matters for reporting purposes
**D.** Because delays never affect these specific conditions

**Correct Answer:** Option (B) — Because outcomes in all three are strongly influenced by how quickly appropriate care begins

**Explanation:** *All three conditions share a strong dependence on rapid response — outcomes worsen significantly the longer appropriate care is delayed.*

**Question 151**

**What should you do if your clothes catch fire?**

**A.** Run to get help
**B.** Stop, Drop, and Roll
**C.** Pour oil on the flames
**D.** Wave your arms to put it out

**Correct Answer:** Option (B) — Stop, Drop, and Roll

**Explanation:** *Stop, Drop, and Roll is the standard technique to smother flames if clothing catches fire.*

**Question 152**

**Why is it unsafe to walk through even shallow flood water without caution?**

**A.** Because it is always completely safe
**B.** Because depth and current strength can be deceptive, risking a fall or injury
**C.** Because shallow water never poses any risk
**D.** Because walking is always safer than any alternative

**Correct Answer:** Option (B) — Because depth and current strength can be deceptive, risking a fall or injury

**Explanation:** *Flood water depth and current strength can be deceptive, making even seemingly shallow water riskier than it appears.*

**Question 153**

**Which colour cyclone warning from the IMD means 'take action now'?**

**A.** Green
**B.** Yellow
**C.** Orange
**D.** Red

**Correct Answer:** Option (D) — Red

**Explanation:** *A red warning from the India Meteorological Department indicates an immediate need to take action.*

**Question 154**

**Why might 'it wasn't bad last time' be a risky assumption regarding cyclone or heatwave alerts?**

**A.** Because every disaster event is guaranteed to be identical in severity
**B.** Because conditions and severity can vary significantly between events, and past mildness doesn't guarantee future safety
**C.** Because alerts are always exaggerated regardless of real risk
**D.** Because this reasoning is always statistically correct

**Correct Answer:** Option (B) — Because conditions and severity can vary significantly between events, and past mildness doesn't guarantee future safety

**Explanation:** *Disaster severity can vary significantly between events, so assuming a past mild outcome guarantees future safety is a risky assumption.*

**Question 155**

**A family lives in a Zone V seismic area. What is the most relevant precaution from this module?**

**A.** Installing extra windows for ventilation
**B.** Securing heavy furniture and knowing safe spots in each room
**C.** Ignoring earthquake drills since they live in a city
**D.** Avoiding any structural safety assessment

**Correct Answer:** Option (B) — Securing heavy furniture and knowing safe spots in each room

**Explanation:** *In high-risk seismic zones, securing heavy furniture and identifying safe spots in each room are directly relevant precautions.*

**Question 156**

**Why is public education about the '30-30 rule' considered more scalable than relying only on official lightning alerts?**

**A.** Because official alerts are always available everywhere instantly
**B.** Because the rule can be applied by anyone, anywhere, without needing connectivity or a specific app
**C.** Because the rule is only useful for scientists
**D.** Because official alerts are more reliable than any simple rule

**Correct Answer:** Option (B) — Because the rule can be applied by anyone, anywhere, without needing connectivity or a specific app

**Explanation:** *The 30-30 rule can be applied by anyone without needing internet connectivity or a specific device, making it broadly accessible.*

**Question 157**

**Why does the National Disaster Management Authority promote household-level preparedness rather than relying solely on government response?**

**A.** Because government response is always instant and sufficient alone
**B.** Because individual and family-level readiness significantly improves outcomes in the critical early period of a disaster
**C.** Because household preparedness has no real impact on outcomes
**D.** Because NDMA has no interest in household-level safety

**Correct Answer:** Option (B) — Because individual and family-level readiness significantly improves outcomes in the critical early period of a disaster

**Explanation:** *Household-level readiness meaningfully improves outcomes during the critical early period before formal response can fully mobilise.*

**Question 158**

**What is an 'assembly point'?**

**A.** The location of a fire extinguisher
**B.** A designated safe location where evacuees gather to be accounted for
**C.** The main entrance of a building
**D.** A location only used during fire drills, never real emergencies

**Correct Answer:** Option (B) — A designated safe location where evacuees gather to be accounted for

**Explanation:** *An assembly point is a designated safe location where evacuees regroup so everyone can be accounted for.*

**Question 159**

**Why should people evacuate a building by walking quickly and calmly rather than running?**

**A.** Because running is always faster and safer
**B.** Because running or pushing can cause falls, injuries, or a dangerous crowd crush
**C.** Because walking slowly wastes valuable time with no benefit
**D.** Because calmness has no effect on evacuation safety

**Correct Answer:** Option (B) — Because running or pushing can cause falls, injuries, or a dangerous crowd crush

**Explanation:** *Running or pushing during an evacuation increases the risk of falls, injuries, and dangerous crowding, making a calm, quick walk safer.*

**Question 160**

**What should you avoid during a lightning storm?**

**A.** Staying indoors
**B.** Sheltering under an isolated tall tree
**C.** Waiting 30 minutes after the last thunder
**D.** Avoiding open fields

**Correct Answer:** Option (B) — Sheltering under an isolated tall tree

**Explanation:** *Sheltering under an isolated tall tree during lightning is dangerous and should be avoided.*

**Question 161**

**What is the primary role of the National Disaster Response Force (NDRF)?**

**A.** Weather forecasting
**B.** Large-scale disaster rescue and response operations
**C.** Issuing building permits
**D.** Running hospitals

**Correct Answer:** Option (B) — Large-scale disaster rescue and response operations

**Explanation:** *The NDRF is a specialised force trained for large-scale disaster rescue and response operations.*

**Question 162**

**Why is standing in a doorway no longer considered the safest earthquake response in most modern homes?**

**A.** Doorways provide no structural benefit in most modern homes; sturdy furniture cover is safer
**B.** Doorways are illegal to stand in during earthquakes
**C.** Modern homes don't have doorways
**D.** Doorways are only dangerous during floods, not earthquakes

**Correct Answer:** Option (A) — Doorways provide no structural benefit in most modern homes; sturdy furniture cover is safer

**Explanation:** *Modern door frames don't offer the structural protection once believed; taking cover under sturdy furniture is generally safer.*

**Question 163**

**Which city launched South Asia's first city-level Heat Action Plan?**

**A.** Mumbai
**B.** Ahmedabad
**C.** Chennai
**D.** Delhi

**Correct Answer:** Option (B) — Ahmedabad

**Explanation:** *Ahmedabad launched South Asia's first city-level Heat Action Plan in 2013.*

**Question 164**

**What should you check for immediately after an earthquake's shaking stops?**

**A.** Only property damage, nothing else
**B.** Injuries, gas leaks, and structural damage, while remaining alert for aftershocks
**C.** Whether the internet is working
**D.** Nothing, since the danger has fully passed

**Correct Answer:** Option (B) — Injuries, gas leaks, and structural damage, while remaining alert for aftershocks

**Explanation:** *After the shaking stops, checking for injuries, gas leaks, and structural damage is important, while staying alert for possible aftershocks.*

**Question 165**

**Which law established the NDMA and related state and district authorities?**

**A.** The National Building Code
**B.** The Disaster Management Act, 2005
**C.** The Factories Act, 1948
**D.** The Motor Vehicles Act

**Correct Answer:** Option (B) — The Disaster Management Act, 2005

**Explanation:** *The Disaster Management Act, 2005 established the NDMA along with state and district disaster management authorities.*

**Question 166**

**What should you do during an earthquake?**

**A.** Run outside immediately during the shaking
**B.** Drop, Cover, and Hold On under sturdy furniture
**C.** Stand in an open doorway
**D.** Use the lift to exit quickly

**Correct Answer:** Option (B) — Drop, Cover, and Hold On under sturdy furniture

**Explanation:** *Drop, Cover, and Hold On under sturdy furniture is the standard safe response during an earthquake.*

**Question 167**

**A building's fire drill reveals that many employees don't know the assembly point location. What does this indicate?**

**A.** The drill was unnecessary
**B.** A gap in preparedness that should be addressed through better communication and practice
**C.** That assembly points are not actually important
**D.** That the building doesn't need an assembly point

**Correct Answer:** Option (B) — A gap in preparedness that should be addressed through better communication and practice

**Explanation:** *This reveals a real preparedness gap that should be corrected through clearer communication and more frequent practice.*

**Question 168**

**What should a family emergency plan include?**

**A.** Only a list of favourite restaurants
**B.** Meeting points and an out-of-town contact
**C.** A plan to ignore alerts if inconvenient
**D.** Nothing beyond a first aid kit

**Correct Answer:** Option (B) — Meeting points and an out-of-town contact

**Explanation:** *A family emergency plan should include agreed meeting points and a designated out-of-town contact, among other elements.*

**Question 169**

**Why does disaster preparedness guidance recommend practising evacuation drills at least once a year?**

**A.** Because drills have no real value beyond compliance
**B.** Because regular practice helps people respond calmly and correctly under real pressure
**C.** Because it is only relevant for schools, not homes
**D.** Because drills are only needed once in a lifetime

**Correct Answer:** Option (B) — Because regular practice helps people respond calmly and correctly under real pressure

**Explanation:** *Regular practice helps build calm, correct responses that are more likely to be followed accurately during a real emergency.*

**Question 170**

**Why does earthquake guidance specifically warn against running outside during active shaking?**

**A.** Because running outside is always completely safe
**B.** Because falling debris and structural collapse risk is often highest immediately outside during shaking
**C.** Because outdoor spaces are never affected by earthquakes
**D.** Because running is physically impossible during shaking

**Correct Answer:** Option (B) — Because falling debris and structural collapse risk is often highest immediately outside during shaking

**Explanation:** *The risk from falling debris and structural elements is often highest right at a building's exterior during active shaking, making it safer to shelter in place initially.*

**Question 171**

**Why is the Damini app particularly useful for outdoor workers and farmers?**

**A.** It has no relevance to outdoor work
**B.** It can alert them up to about 40 minutes before lightning is likely to strike nearby, allowing time to seek shelter
**C.** It only works indoors
**D.** It replaces the need for any other safety precaution

**Correct Answer:** Option (B) — It can alert them up to about 40 minutes before lightning is likely to strike nearby, allowing time to seek shelter

**Explanation:** *Advance lightning alerts give outdoor workers valuable time to seek shelter before a storm arrives.*

**Question 172**

**A family updates their go-bag only once, when first assembled, and never again. Why is this a common mistake?**

**A.** Because go-bags never need updating once packed
**B.** Because supplies can expire, sizes and needs change, and documents can become outdated over time
**C.** Because reviewing a go-bag has no practical benefit
**D.** Because a go-bag is meant to be permanent and untouched

**Correct Answer:** Option (B) — Because supplies can expire, sizes and needs change, and documents can become outdated over time

**Explanation:** *Supplies expire, family needs change, and documents can go out of date, making periodic review of a go-bag genuinely important.*

**Question 173**

**What is the purpose of designating an out-of-town emergency contact in a family plan?**

**A.** To have someone to blame if plans fail
**B.** To provide a reachable point of contact if local phone networks are down or overloaded
**C.** To replace the need for any local meeting point
**D.** To handle the family's finances during a disaster

**Correct Answer:** Option (B) — To provide a reachable point of contact if local phone networks are down or overloaded

**Explanation:** *An out-of-town contact can often be reached even when local networks are disrupted, helping separated family members reconnect.*

**Question 174**

**What is the Damini app used for?**

**A.** Tracking cyclones only
**B.** Providing lightning strike alerts
**C.** Booking ambulance services
**D.** Reporting fire outbreaks

**Correct Answer:** Option (B) — Providing lightning strike alerts

**Explanation:** *The Damini app, developed by IITM and IMD, provides real-time and predictive lightning strike alerts.*

**Question 175**

**Which government body is India's apex disaster management authority?**

**A.** NDRF
**B.** NDMA
**C.** IMD
**D.** IITM

**Correct Answer:** Option (B) — NDMA

**Explanation:** *The National Disaster Management Authority (NDMA) is India's apex body for disaster management policy.*

**Question 176**

**Which parts of India fall under high-risk seismic zones IV and V?**

**A.** Only coastal Gujarat
**B.** The Himalayan belt and North-East India
**C.** Central Madhya Pradesh only
**D.** Southern Tamil Nadu only

**Correct Answer:** Option (B) — The Himalayan belt and North-East India

**Explanation:** *The Himalayan belt and North-East India fall under high-risk seismic Zones IV and V for earthquakes.*

**Question 177**

**A household hears an official cyclone evacuation order. What is the correct response?**

**A.** Wait to see how bad it gets before deciding
**B.** Leave immediately via the recommended evacuation route
**C.** Stay to protect belongings at all costs
**D.** Evacuate only if flooding has already started

**Correct Answer:** Option (B) — Leave immediately via the recommended evacuation route

**Explanation:** *Once an official evacuation order is given, leaving immediately via the recommended route is the safest response.*

**Question 178**

**A joint family includes an elderly member with limited mobility. How should this affect their evacuation plan?**

**A.** No adjustment is needed at all
**B.** The plan should specifically account for assisting them safely during evacuation
**C.** They should be excluded from the family plan entirely
**D.** Mobility has no bearing on evacuation planning

**Correct Answer:** Option (B) — The plan should specifically account for assisting them safely during evacuation

**Explanation:** *A family evacuation plan should specifically account for members with limited mobility to ensure they can be assisted safely.*

**Question 179**

**Why might a household in a low-risk area for cyclones still benefit from a general emergency go-bag?**

**A.** Because go-bags are useless outside cyclone-prone areas
**B.** Because other emergencies, like fires or earthquakes, can occur regardless of cyclone risk
**C.** Because only cyclone-prone households are ever affected by emergencies
**D.** Because go-bags are purely symbolic items

**Correct Answer:** Option (B) — Because other emergencies, like fires or earthquakes, can occur regardless of cyclone risk

**Explanation:** *A go-bag remains useful because many types of emergencies, not just cyclones, can occur in any area.*

**Question 180**

**Why does the Ahmedabad Heat Action Plan use a colour-coded alert system?**

**A.** To make weather reports look more decorative
**B.** To clearly communicate rising heat risk levels and appropriate precautions to the public
**C.** Because temperature has no link to health risk
**D.** To replace the need for any other heat safety measures

**Correct Answer:** Option (B) — To clearly communicate rising heat risk levels and appropriate precautions to the public

**Explanation:** *A colour-coded system clearly communicates increasing heat risk levels, helping the public take appropriate precautions.*

**Question 181**

**Why does NDMA guidance suggest checking on elderly neighbours specifically during heatwaves and cyclones?**

**A.** Because elderly individuals are never at higher risk during these events
**B.** Because elderly individuals may be more vulnerable to extreme heat or evacuation difficulty, warranting extra community attention
**C.** Because this is purely a symbolic gesture with no practical value
**D.** Because only younger people are considered relevant during such events

**Correct Answer:** Option (B) — Because elderly individuals may be more vulnerable to extreme heat or evacuation difficulty, warranting extra community attention

**Explanation:** *Elderly individuals can be more vulnerable to extreme heat or face greater evacuation difficulty, making community checks a practical safety measure.*

**Question 182**

**What are the four phases of the Disaster Management Cycle?**

**A.** Warning, Escape, Rescue, Rebuild
**B.** Mitigation, Preparedness, Response, Recovery
**C.** Alert, Danger, Safety, Closure
**D.** Planning, Funding, Building, Testing

**Correct Answer:** Option (B) — Mitigation, Preparedness, Response, Recovery

**Explanation:** *The Disaster Management Cycle consists of Mitigation, Preparedness, Response, and Recovery.*

**Question 183**

**What number connects to India's disaster management control room?**

**A.** 101
**B.** 1070 or 1078
**C.** 1098
**D.** 14416

**Correct Answer:** Option (B) — 1070 or 1078

**Explanation:** *1070 or 1078, depending on the state, connects callers to disaster management control rooms.*

**Question 184**

**A family in a flood-prone area keeps documents in a regular folder rather than a waterproof one. Why does this matter?**

**A.** Because document storage type never matters in emergencies
**B.** Because flood exposure could destroy or damage important documents stored in non-waterproof materials
**C.** Because documents are irrelevant during floods
**D.** Because waterproof storage is purely a cosmetic preference

**Correct Answer:** Option (B) — Because flood exposure could destroy or damage important documents stored in non-waterproof materials

**Explanation:** *Important documents can be destroyed or damaged by flood exposure if not stored in waterproof materials, risking real practical consequences afterward.*

**Question 185**

**How much fast-moving flood water can knock an adult off their feet?**

**A.** Just 15 cm
**B.** 2 metres
**C.** 5 metres
**D.** It never happens regardless of depth

**Correct Answer:** Option (A) — Just 15 cm

**Explanation:** *As little as 15 cm of fast-moving flood water can knock an adult off their feet.*

**Question 186**

**Why is it dangerous to open all windows during a cyclone to 'equalise pressure'?**

**A.** Because it actually helps and should be done
**B.** Because it is a myth that increases the risk of injury from flying debris
**C.** Because windows cannot be opened during cyclones anyway
**D.** Because it has no effect either way

**Correct Answer:** Option (B) — Because it is a myth that increases the risk of injury from flying debris

**Explanation:** *This is a myth — opening windows during a cyclone increases the risk of injury from wind-driven debris, rather than helping.*

**Question 187**

**What is the '30-30 rule' used for?**

**A.** Deciding when to evacuate during a flood
**B.** Judging lightning safety based on time between lightning and thunder
**C.** Timing CPR compressions
**D.** Measuring earthquake intensity

**Correct Answer:** Option (B) — Judging lightning safety based on time between lightning and thunder

**Explanation:** *The 30-30 rule helps judge lightning danger: go indoors if thunder follows lightning within 30 seconds, and wait 30 minutes after the last thunder.*

**Question 188**

**What should you do if flood water is rising near your home?**

**A.** Drive through it quickly
**B.** Move to higher ground immediately
**C.** Wait until it's chest-deep before moving
**D.** Walk through it to check its depth

**Correct Answer:** Option (B) — Move to higher ground immediately

**Explanation:** *Moving to higher ground immediately is the correct response, since flood water can be far more dangerous than it appears.*

**Question 189**

**A coastal family receives an orange cyclone alert. What does this signal?**

**A.** No action needed at all
**B.** Be prepared, as conditions may worsen toward a warning level
**C.** The cyclone has already passed safely
**D.** It is safe to go to the beach

**Correct Answer:** Option (B) — Be prepared, as conditions may worsen toward a warning level

**Explanation:** *An orange alert signals citizens to be prepared, since conditions may escalate to a red warning requiring immediate action.*

**Question 190**

**What is a 'go-bag'?**

**A.** A bag used only for travel holidays
**B.** A pre-packed emergency kit ready to grab at a moment's notice
**C.** A bag for grocery shopping
**D.** A type of first aid kit only for hospitals

**Correct Answer:** Option (B) — A pre-packed emergency kit ready to grab at a moment's notice

**Explanation:** *A go-bag is a pre-packed kit of emergency essentials that can be grabbed quickly when needed.*

**Question 191**

**Why should lifts never be used during a fire or earthquake evacuation?**

**A.** They are usually too slow
**B.** They can fail, trap occupants, or lose power during such emergencies
**C.** They are reserved for staff only
**D.** They have no real risk at all

**Correct Answer:** Option (B) — They can fail, trap occupants, or lose power during such emergencies

**Explanation:** *Lifts can fail, lose power, or trap occupants during a fire or earthquake, making stairs the safer evacuation choice.*

**Question 192**

**Why does mitigation (like earthquake-resistant building codes) matter even though it happens long before any disaster occurs?**

**A.** Because mitigation has no measurable effect on outcomes
**B.** Because reducing risk in advance can significantly limit damage and casualties when a disaster eventually strikes
**C.** Because mitigation is purely a symbolic government activity
**D.** Because building codes are unrelated to disaster outcomes

**Correct Answer:** Option (B) — Because reducing risk in advance can significantly limit damage and casualties when a disaster eventually strikes

**Explanation:** *Advance risk-reduction measures like building codes can significantly limit the damage and casualties experienced when a disaster occurs.*

**Question 193**

**Why does official guidance recommend following IMD and NDMA alerts over social media rumours?**

**A.** Because official sources are always slower and less useful
**B.** Because official alerts are verified and accurate, while unverified rumours can cause confusion or panic
**C.** Because social media is always more accurate
**D.** Because official alerts and rumours are equally reliable

**Correct Answer:** Option (B) — Because official alerts are verified and accurate, while unverified rumours can cause confusion or panic

**Explanation:** *Official sources provide verified, accurate information, while unverified rumours can spread confusion or unnecessary panic.*

**Question 194**

**Why does disaster preparedness guidance recommend teaching children basic responses like 'Drop, Cover, Hold On' from an early age?**

**A.** Because children are never present during disasters
**B.** Because early, simple training helps ensure automatic, correct responses even without adult guidance in the moment
**C.** Because children's safety is not a relevant concern in disaster planning
**D.** Because teaching children has no measurable safety benefit

**Correct Answer:** Option (B) — Because early, simple training helps ensure automatic, correct responses even without adult guidance in the moment

**Explanation:** *Early, simple training helps children respond automatically and correctly, which matters if no adult is immediately present to guide them.*

**Question 195**

**Why is 'knowing your area's specific hazard risk' emphasised over generic, one-size-fits-all advice?**

**A.** Because generic advice is always sufficient regardless of location
**B.** Because effective preparedness depends on the specific hazards relevant to a person's actual location, like seismic zone or flood risk
**C.** Because location has no bearing on disaster risk
**D.** Because specific hazard knowledge has no practical use

**Correct Answer:** Option (B) — Because effective preparedness depends on the specific hazards relevant to a person's actual location, like seismic zone or flood risk

**Explanation:** *Effective preparedness depends on understanding the specific hazards genuinely relevant to one's own location, rather than generic advice alone.*

**Question 196**

**Why is 'never use lifts during a fire' considered non-negotiable safety guidance rather than a general suggestion?**

**A.** Because lifts are always slower than stairs regardless of danger
**B.** Because lift failure or power loss during a fire poses a severe, potentially fatal risk of entrapment
**C.** Because lifts are decorative and never functional during emergencies
**D.** Because this rule only applies to very old buildings

**Correct Answer:** Option (B) — Because lift failure or power loss during a fire poses a severe, potentially fatal risk of entrapment

**Explanation:** *The severe risk of entrapment from lift failure or power loss during a fire makes this a strict, non-negotiable safety rule.*

**Question 197**

**A district hospital loses power during a cyclone. Which disaster management phase does restoring services afterward represent?**

**A.** Mitigation
**B.** Preparedness
**C.** Response
**D.** Recovery

**Correct Answer:** Option (D) — Recovery

**Explanation:** *Restoring services and rebuilding after the immediate danger has passed falls under the Recovery phase of the disaster management cycle.*

**Question 198**

**Why is 'preparedness costs little but matters enormously' a fitting summary of this module's overall message?**

**A.** Because none of the described precautions actually work in practice
**B.** Because most described actions — planning, awareness, small kit preparation — require modest cost or effort relative to their potential impact
**C.** Because preparedness is prohibitively expensive for most families
**D.** Because disaster outcomes are entirely random regardless of preparation

**Correct Answer:** Option (B) — Because most described actions — planning, awareness, small kit preparation — require modest cost or effort relative to their potential impact

**Explanation:** *Most preparedness actions covered — planning ahead, staying informed, packing a basic kit — require relatively little cost or effort compared to their potential impact during a real disaster.*

**Question 199**

**What does the 'A' in the fire extinguisher technique PASS stand for?**

**A.** Alert
**B.** Aim at the base of the fire
**C.** Assist others first
**D.** Avoid the fire entirely

**Correct Answer:** Option (B) — Aim at the base of the fire

**Explanation:** *PASS stands for Pull the pin, Aim at the base, Squeeze the handle, Sweep side to side.*

**Question 200**

**Why does fire safety guidance recommend knowing two exit routes from every room, not just one?**

**A.** Because a single exit route is always sufficient
**B.** Because the primary route may become blocked or unsafe, making a backup essential
**C.** Because having two routes is only a legal formality
**D.** Because homes are legally required to always have identical exits

**Correct Answer:** Option (B) — Because the primary route may become blocked or unsafe, making a backup essential

**Explanation:** *A backup exit route is essential in case the primary route becomes blocked or unsafe during an emergency.*

**Question 201**

**Why is Mission Indradhanush's focus on 'under-reached areas' significant for overall immunisation goals?**

**A.** Because under-reached areas have no bearing on national immunisation coverage
**B.** Because closing coverage gaps in specific areas helps raise overall national immunisation rates and reduce localised outbreak risk
**C.** Because under-reached areas already have the highest immunisation rates
**D.** Because national coverage is unaffected by localised gaps

**Correct Answer:** Option (B) — Because closing coverage gaps in specific areas helps raise overall national immunisation rates and reduce localised outbreak risk

**Explanation:** *Targeting coverage gaps in specific under-reached areas directly helps raise overall national immunisation rates and reduces the risk of localised outbreaks.*

**Question 202**

**What is a communicable disease?**

**A.** A disease caused only by poor diet
**B.** An illness that can spread from person to person or via a vector
**C.** A disease that only affects the elderly
**D.** A disease with no known cause

**Correct Answer:** Option (B) — An illness that can spread from person to person or via a vector

**Explanation:** *A communicable disease is caused by an infectious agent and can spread between people or through a vector like a mosquito.*

**Question 203**

**Is TB treatment free in India?**

**A.** No, it is always expensive
**B.** Yes, it is free under the National TB Elimination Programme
**C.** Only for children
**D.** Only in private hospitals

**Correct Answer:** Option (B) — Yes, it is free under the National TB Elimination Programme

**Explanation:** *TB diagnosis and treatment are provided free of cost under India's National TB Elimination Programme.*

**Question 204**

**Why might obesity, diabetes, and hypertension often be discussed together in public health contexts?**

**A.** Because they are entirely unrelated conditions with no common risk factors
**B.** Because they share overlapping lifestyle-related risk factors and frequently occur together in the same individuals
**C.** Because only one of these three conditions is medically significant
**D.** Because grouping them together has no scientific basis

**Correct Answer:** Option (B) — Because they share overlapping lifestyle-related risk factors and frequently occur together in the same individuals

**Explanation:** *These conditions often share lifestyle-related risk factors and frequently co-occur, which is why they are commonly addressed together in public health guidance.*

**Question 205**

**Why does India's health system prioritise both curative TB treatment and preventive vector control for malaria/dengue, rather than only one approach?**

**A.** Because these diseases require completely identical management strategies
**B.** Because TB (airborne, curable with treatment) and malaria/dengue (vector-borne, prevention-focused) require different, disease-specific strategies
**C.** Because only curative approaches are ever necessary for any disease
**D.** Because preventive approaches are irrelevant to disease control

**Correct Answer:** Option (B) — Because TB (airborne, curable with treatment) and malaria/dengue (vector-borne, prevention-focused) require different, disease-specific strategies

**Explanation:** *Since TB spreads through the air and is treatable, while malaria/dengue spread via mosquitoes and lack specific cures, each requires a tailored strategy — treatment-focused for TB, prevention-focused for vector-borne diseases.*

**Question 206**

**Which mode of disease spread applies to illnesses like TB and COVID-19?**

**A.** Vector-borne
**B.** Airborne / droplet spread through coughs and sneezes
**C.** Waterborne only
**D.** Spread only through direct blood contact

**Correct Answer:** Option (B) — Airborne / droplet spread through coughs and sneezes

**Explanation:** *TB and COVID-19 spread mainly through airborne or droplet transmission, such as coughing or sneezing.*

**Question 207**

**A family removes stagnant water from coolers and pots weekly during monsoon season. What disease risk does this primarily reduce?**

**A.** Hypertension
**B.** Dengue and other mosquito-borne diseases
**C.** Diabetes
**D.** Obesity

**Correct Answer:** Option (B) — Dengue and other mosquito-borne diseases

**Explanation:** *Removing stagnant water reduces mosquito breeding sites, directly lowering the risk of dengue and other vector-borne diseases.*

**Question 208**

**Where can citizens access free screening for common non-communicable diseases in India?**

**A.** Only at private specialty hospitals
**B.** At Ayushman Arogya Mandirs (Health and Wellness Centres)
**C.** Only through paid annual health packages
**D.** Only at international travel clinics

**Correct Answer:** Option (B) — At Ayushman Arogya Mandirs (Health and Wellness Centres)

**Explanation:** *Ayushman Arogya Mandirs, formerly known as Health and Wellness Centres, offer free screening for common NCDs close to where people live.*

**Question 209**

**What does the Ni-Kshay Poshan Yojana provide to TB patients?**

**A.** Free housing
**B.** Direct financial support for nutrition during treatment
**C.** Free college admission
**D.** Legal defence services

**Correct Answer:** Option (B) — Direct financial support for nutrition during treatment

**Explanation:** *The Ni-Kshay Poshan Yojana provides direct financial support to registered TB patients to support their nutrition during treatment.*

**Question 210**

**Which government body is India's national agency for poisoning-related and other vector-borne disease control combined efforts, specifically overseeing malaria and dengue control?**

**A.** NCVBDC
**B.** IRDAI
**C.** NOTTO
**D.** FSSAI

**Correct Answer:** Option (A) — NCVBDC

**Explanation:** *The National Centre for Vector Borne Disease Control (NCVBDC) oversees malaria, dengue, and other vector-borne disease control efforts.*

**Question 211**

**What was Mission Indradhanush launched to achieve?**

**A.** Reducing hospital costs
**B.** Raising full child immunisation coverage in under-reached areas
**C.** Building new highways
**D.** Providing free laptops to students

**Correct Answer:** Option (B) — Raising full child immunisation coverage in under-reached areas

**Explanation:** *Mission Indradhanush was launched to push full child immunisation coverage above 90%, focusing on under-reached areas.*

**Question 212**

**What are typical symptoms of COVID-19?**

**A.** Broken bones and swelling
**B.** Fever, cough, sore throat, and fatigue
**C.** Sudden hair loss only
**D.** Improved sense of smell

**Correct Answer:** Option (B) — Fever, cough, sore throat, and fatigue

**Explanation:** *Fever, cough, sore throat, and fatigue are typical COVID-19 symptoms, with some cases involving loss of taste or smell.*

**Question 213**

**Why does 'hidden hunger' pose a health risk even when a person's calorie intake seems sufficient?**

**A.** Because hidden hunger refers to insufficient micronutrients despite adequate calorie intake
**B.** Because hidden hunger is a made-up term with no real basis
**C.** Because calorie intake always guarantees full nutritional adequacy
**D.** Because hidden hunger only relates to communicable diseases

**Correct Answer:** Option (A) — Because hidden hunger refers to insufficient micronutrients despite adequate calorie intake

**Explanation:** *Hidden hunger refers to a lack of essential vitamins and minerals, which can exist even when overall calorie intake appears adequate.*

**Question 214**

**What is a key mistake regarding antibiotic use that contributes to antibiotic resistance?**

**A.** Completing the full prescribed course
**B.** Stopping antibiotics early once symptoms improve
**C.** Taking antibiotics only when prescribed
**D.** Consulting a doctor before use

**Correct Answer:** Option (B) — Stopping antibiotics early once symptoms improve

**Explanation:** *Stopping antibiotics early, even when symptoms improve, allows surviving bacteria to develop resistance to the medicine.*

**Question 215**

**How does TB primarily spread between people?**

**A.** Through mosquito bites
**B.** Through the air, via coughing or sneezing
**C.** Through contaminated water
**D.** Through direct skin contact only

**Correct Answer:** Option (B) — Through the air, via coughing or sneezing

**Explanation:** *TB spreads through the air when an infected person coughs or sneezes, making airborne transmission its main route.*

**Question 216**

**Why might a person assume incorrectly that 'once a vaccine schedule is missed, it's too late to catch up'?**

**A.** Because catch-up vaccination is genuinely unavailable in India
**B.** Because catch-up vaccination is actually available and effective, contrary to this common myth
**C.** Because missed vaccines can never be administered under any circumstance
**D.** Because this belief is entirely accurate and evidence-based

**Correct Answer:** Option (B) — Because catch-up vaccination is actually available and effective, contrary to this common myth

**Explanation:** *Catch-up vaccination is available and remains effective, making the belief that missed doses can never be completed a myth.*

**Question 217**

**Why does 'genetic and lifestyle-related risk both matter for NCDs' better reflect reality than blaming either factor alone?**

**A.** Because genetics is the only factor that ever matters for NCDs
**B.** Because lifestyle choices are the only factor that ever matters for NCDs
**C.** Because NCD risk typically results from an interaction between genetic predisposition and lifestyle factors
**D.** Because NCDs have no identifiable risk factors at all

**Correct Answer:** Option (C) — Because NCD risk typically results from an interaction between genetic predisposition and lifestyle factors

**Explanation:** *NCD risk generally arises from an interaction between genetic predisposition and lifestyle factors, rather than either cause acting alone.*

**Question 218**

**What does BMI stand for?**

**A.** Body Mass Index
**B.** Basic Medical Information
**C.** Bone Mineral Indicator
**D.** Blood Measurement Index

**Correct Answer:** Option (A) — Body Mass Index

**Explanation:** *BMI stands for Body Mass Index, a screening ratio of weight to height.*

**Question 219**

**How is dengue spread?**

**A.** Through the bite of an infected Aedes mosquito
**B.** Through contaminated food only
**C.** Through airborne transmission
**D.** Through direct human contact

**Correct Answer:** Option (A) — Through the bite of an infected Aedes mosquito

**Explanation:** *Dengue is spread through the bite of an infected Aedes mosquito, which typically breeds in clean, stagnant water.*

**Question 220**

**A person believes 'if I feel fine, my blood pressure must be normal.' Why is this reasoning flawed?**

**A.** Because feeling fine always guarantees normal blood pressure
**B.** Because hypertension frequently causes no symptoms, so feeling well doesn't rule it out
**C.** Because blood pressure has no connection to how a person feels
**D.** Because this reasoning is completely accurate and reliable

**Correct Answer:** Option (B) — Because hypertension frequently causes no symptoms, so feeling well doesn't rule it out

**Explanation:** *Since hypertension often causes no symptoms, feeling well provides no reliable guarantee that blood pressure is actually normal.*

**Question 221**

**Why is 'awareness of both prevention and treatment options' considered essential for managing India's combined communicable and lifestyle disease burden?**

**A.** Because prevention and treatment are entirely interchangeable concepts
**B.** Because different diseases in this burden require different balances of prevention (e.g., vector control) and treatment (e.g., TB medication) to be effectively managed
**C.** Because only treatment matters for any disease category
**D.** Because awareness has no practical bearing on health outcomes

**Correct Answer:** Option (B) — Because different diseases in this burden require different balances of prevention (e.g., vector control) and treatment (e.g., TB medication) to be effectively managed

**Explanation:** *Because the diseases within India's combined disease burden vary widely in nature, effective management requires understanding the right balance of prevention and treatment specific to each one.*

**Question 222**

**Why might a citizen incorrectly believe 'skipping meals helps with weight loss,' and what is the more accurate view?**

**A.** Skipping meals is always effective with no downsides
**B.** It often leads to overeating later and can disrupt metabolism, making it a less reliable approach than balanced eating
**C.** Skipping meals has no effect on weight or metabolism
**D.** Skipping meals is medically recommended for all individuals

**Correct Answer:** Option (B) — It often leads to overeating later and can disrupt metabolism, making it a less reliable approach than balanced eating

**Explanation:** *Skipping meals can lead to overeating later and disrupt metabolism, making it a less reliable and less healthy approach than balanced eating.*

**Question 223**

**What is the WHO's current classification of COVID-19, as of recent guidance?**

**A.** Still a global health emergency
**B.** An ongoing respiratory illness managed similarly to seasonal influenza
**C.** A disease that no longer exists anywhere
**D.** A disease with no vaccination options

**Correct Answer:** Option (B) — An ongoing respiratory illness managed similarly to seasonal influenza

**Explanation:** *The WHO no longer classifies COVID-19 as a global health emergency, managing it as an ongoing, endemic respiratory illness.*

**Question 224**

**Why does a national programme like NTEP emphasise both free treatment and mandatory case reporting for TB?**

**A.** Because reporting has no practical value beyond record-keeping
**B.** Because mandatory reporting helps track and support every patient while enabling coordinated national elimination efforts
**C.** Because free treatment alone is sufficient without any tracking
**D.** Because TB reporting is only a bureaucratic formality

**Correct Answer:** Option (B) — Because mandatory reporting helps track and support every patient while enabling coordinated national elimination efforts

**Explanation:** *Mandatory reporting allows the national programme to track and support individual patients while coordinating broader disease elimination efforts.*

**Question 225**

**Why does public health messaging around TB specifically challenge the myth that it 'only affects poor or malnourished people'?**

**A.** Because this myth is completely accurate and should be reinforced
**B.** Because TB can affect anyone exposed to the bacteria, regardless of economic status, and the myth can discourage timely testing
**C.** Because TB no longer exists in wealthier populations
**D.** Because economic status is the sole determining factor for TB risk

**Correct Answer:** Option (B) — Because TB can affect anyone exposed to the bacteria, regardless of economic status, and the myth can discourage timely testing

**Explanation:** *TB can affect anyone exposed to the bacteria regardless of economic status, and this myth can discourage people from seeking timely testing.*

**Question 226**

**Is there a specific antiviral cure for dengue?**

**A.** Yes, a widely available cure exists
**B.** No, treatment focuses on rest, fluids, and monitoring
**C.** Yes, but only in government hospitals
**D.** No, dengue cannot be treated in any way

**Correct Answer:** Option (B) — No, treatment focuses on rest, fluids, and monitoring

**Explanation:** *There is no specific antiviral cure for dengue; treatment focuses on supportive care such as rest, fluids, and monitoring.*

**Question 227**

**What is the main warning sign of tuberculosis (TB)?**

**A.** A cough lasting more than 2 weeks
**B.** A single sneeze
**C.** Mild hunger
**D.** A skin rash only

**Correct Answer:** Option (A) — A cough lasting more than 2 weeks

**Explanation:** *A cough lasting more than two weeks, often with fever and weight loss, is a key warning sign of TB.*

**Question 228**

**What is 'prediabetes'?**

**A.** A severe, advanced stage of diabetes
**B.** Blood sugar levels higher than normal but not yet in the diabetic range
**C.** A condition unrelated to blood sugar
**D.** A type of viral infection

**Correct Answer:** Option (B) — Blood sugar levels higher than normal but not yet in the diabetic range

**Explanation:** *Prediabetes refers to blood sugar levels that are higher than normal but not yet high enough to be classified as diabetes.*

**Question 229**

**What are common warning signs of diabetes?**

**A.** Excessive thirst and frequent urination
**B.** Improved eyesight
**C.** Reduced appetite only
**D.** Faster hair growth

**Correct Answer:** Option (A) — Excessive thirst and frequent urination

**Explanation:** *Excessive thirst, frequent urination, and unexplained fatigue are common warning signs of diabetes.*

**Question 230**

**Which of these is a non-communicable disease?**

**A.** Tuberculosis
**B.** Hypertension
**C.** Dengue
**D.** COVID-19

**Correct Answer:** Option (B) — Hypertension

**Explanation:** *Hypertension is a non-communicable disease, developing from lifestyle and other factors rather than spreading between people.*

**Question 231**

**Why is it inaccurate to say 'diabetes only affects overweight people'?**

**A.** Because diabetes has no connection to any physical factors
**B.** Because diabetes can affect people of any body type, including those of normal weight
**C.** Because being overweight is the only cause of diabetes
**D.** Because diabetes is exclusively genetic and unrelated to body type

**Correct Answer:** Option (B) — Because diabetes can affect people of any body type, including those of normal weight

**Explanation:** *Diabetes risk is influenced by multiple factors, and it can affect people of any body type, not just those who are overweight.*

**Question 232**

**Why is 'hospital-based treatment only' an incomplete strategy for managing dengue outbreaks at a population level?**

**A.** Because hospitals alone can fully prevent all future dengue cases
**B.** Because prevention through mosquito control addresses the root cause, while treatment only manages individual cases after infection
**C.** Because dengue never requires any hospital-based care
**D.** Because population-level prevention has no real impact on case numbers

**Correct Answer:** Option (B) — Because prevention through mosquito control addresses the root cause, while treatment only manages individual cases after infection

**Explanation:** *Since there's no specific cure, mosquito control is essential to reduce actual case numbers, while hospital treatment only addresses cases after infection has already occurred.*

**Question 233**

**Why might a health platform describe communicable and non-communicable diseases as India's 'double burden'?**

**A.** Because only one type of disease actually exists in India
**B.** Because India faces significant challenges from both infectious diseases and rising lifestyle diseases simultaneously
**C.** Because the term has no real statistical basis
**D.** Because communicable diseases have been fully eliminated in India

**Correct Answer:** Option (B) — Because India faces significant challenges from both infectious diseases and rising lifestyle diseases simultaneously

**Explanation:** *India faces the simultaneous challenge of persistent infectious diseases alongside a significant rise in lifestyle-related NCDs, forming a 'double burden.'*

**Question 234**

**Why don't antibiotics work against viral infections?**

**A.** Because viruses and bacteria have different structures that antibiotics can't act on
**B.** Because viruses are too small to be affected by any medicine
**C.** Because antibiotics are banned for viral use
**D.** Because viral infections don't actually exist

**Correct Answer:** Option (A) — Because viruses and bacteria have different structures that antibiotics can't act on

**Explanation:** *Antibiotics target bacterial structures; viruses are structurally different, so antibiotics have no effect on them.*

**Question 235**

**Which programme is India's national vaccination initiative for children?**

**A.** Poshan Abhiyaan
**B.** Universal Immunisation Programme
**C.** Ayushman Bharat
**D.** Digital India

**Correct Answer:** Option (B) — Universal Immunisation Programme

**Explanation:** *The Universal Immunisation Programme provides free vaccines to children and pregnant women against multiple diseases.*

**Question 236**

**Why does the ICMR-INDIAB study's finding of both high diabetes and high prediabetes prevalence matter for public health planning?**

**A.** Because prediabetes has no relationship to future diabetes risk
**B.** Because it highlights a large population where early lifestyle intervention could still prevent progression to diabetes
**C.** Because diabetes prevalence figures are irrelevant to policy
**D.** Because prediabetes always resolves on its own without any risk

**Correct Answer:** Option (B) — Because it highlights a large population where early lifestyle intervention could still prevent progression to diabetes

**Explanation:** *A large prediabetic population represents an opportunity for early lifestyle intervention that could meaningfully reduce future diabetes cases.*

**Question 237**

**A person has a cold with mild fever and body ache for 3 days. What is the most appropriate general approach?**

**A.** Immediately start antibiotics
**B.** Rest, fluids, and symptom relief, since most viral infections are self-limiting
**C.** Avoid all fluids until fully recovered
**D.** Seek surgery as a precaution

**Correct Answer:** Option (B) — Rest, fluids, and symptom relief, since most viral infections are self-limiting

**Explanation:** *Most viral infections like a common cold are self-limiting and resolve with rest, fluids, and general symptom relief.*

**Question 238**

**Why might national disease programmes track both incidence (new cases) and mortality (deaths) rather than just one metric?**

**A.** Because mortality data alone always tells the complete story
**B.** Because tracking both reveals whether a disease is spreading differently than it is causing death, informing more precise interventions
**C.** Because incidence data has no practical use for public health planning
**D.** Because these two metrics are always identical in every disease

**Correct Answer:** Option (B) — Because tracking both reveals whether a disease is spreading differently than it is causing death, informing more precise interventions

**Explanation:** *Tracking both metrics reveals whether a disease's spread and its lethality are changing differently, allowing more precise, targeted interventions.*

**Question 239**

**How is malaria spread?**

**A.** Through the bite of an infected Anopheles mosquito
**B.** Through shared utensils
**C.** Through the air
**D.** Through insect bites of any kind equally

**Correct Answer:** Option (A) — Through the bite of an infected Anopheles mosquito

**Explanation:** *Malaria is a parasitic infection spread specifically through the bite of an infected Anopheles mosquito.*

**Question 240**

**A person with obesity but no other symptoms is told their risk of diabetes and hypertension is elevated. Why is this scientifically justified?**

**A.** Because obesity has no established connection to any other health condition
**B.** Because obesity is a recognised risk factor that increases susceptibility to conditions like diabetes and hypertension
**C.** Because this claim is a myth with no supporting evidence
**D.** Because obesity guarantees the immediate onset of diabetes

**Correct Answer:** Option (B) — Because obesity is a recognised risk factor that increases susceptibility to conditions like diabetes and hypertension

**Explanation:** *Obesity is a well-established risk factor that increases the likelihood of developing conditions such as diabetes and hypertension.*

**Question 241**

**Why is hypertension often called a 'silent killer'?**

**A.** Because it always causes sudden death with no warning at all
**B.** Because it usually causes no symptoms, even while damaging the body over time
**C.** Because it only affects elderly people
**D.** Because it is extremely rare

**Correct Answer:** Option (B) — Because it usually causes no symptoms, even while damaging the body over time

**Explanation:** *Hypertension often causes no noticeable symptoms while quietly damaging the heart and blood vessels over time.*

**Question 242**

**Why does malaria surveillance rely on confirmed blood tests rather than symptoms alone?**

**A.** Because symptoms alone are always sufficient and accurate for diagnosis
**B.** Because malaria symptoms can resemble other illnesses, making laboratory confirmation important for accurate treatment
**C.** Because blood tests have no diagnostic value for malaria
**D.** Because malaria has no distinguishing symptoms at all

**Correct Answer:** Option (B) — Because malaria symptoms can resemble other illnesses, making laboratory confirmation important for accurate treatment

**Explanation:** *Since malaria symptoms can resemble other illnesses, confirming the diagnosis through a blood test ensures accurate, appropriate treatment.*

**Question 243**

**Why might a person with no symptoms still be diagnosed with hypertension during a routine check-up?**

**A.** Because hypertension always has obvious symptoms
**B.** Because hypertension frequently develops without noticeable symptoms, making screening essential
**C.** Because routine check-ups are inaccurate
**D.** Because hypertension cannot be detected through blood pressure checks

**Correct Answer:** Option (B) — Because hypertension frequently develops without noticeable symptoms, making screening essential

**Explanation:** *Since hypertension often causes no symptoms, routine screening is often the only way it is detected before complications arise.*

**Question 244**

**Why is completing a full course of TB medication especially important?**

**A.** Because TB medication has no real effect on the disease
**B.** Because incomplete treatment can allow the infection to persist or become drug-resistant
**C.** Because TB medication is only symbolic
**D.** Because TB always resolves on its own regardless of treatment

**Correct Answer:** Option (B) — Because incomplete treatment can allow the infection to persist or become drug-resistant

**Explanation:** *Incomplete TB treatment can allow the infection to persist or contribute to the development of drug-resistant TB.*

**Question 245**

**A person tests positive for a bacterial infection and is prescribed antibiotics. Why might a doctor specify the exact duration of the course?**

**A.** Because duration has no bearing on treatment effectiveness
**B.** Because completing the specific, full duration is necessary to fully eliminate the bacteria and prevent resistance
**C.** Because a shorter course is always equally effective
**D.** Because antibiotics have no defined treatment duration

**Correct Answer:** Option (B) — Because completing the specific, full duration is necessary to fully eliminate the bacteria and prevent resistance

**Explanation:** *Completing the full, specifically prescribed duration helps ensure the bacteria are fully eliminated and reduces the risk of resistance developing.*

**Question 246**

**Why is 'only unwell people need health insurance' considered a myth in the context of NCD prevention awareness?**

**A.** Because insurance has no relevance to lifestyle diseases
**B.** Because insurance protects against sudden, high costs from conditions that can develop even in currently healthy individuals
**C.** Because only currently ill people ever benefit from insurance
**D.** Because this statement is entirely accurate

**Correct Answer:** Option (B) — Because insurance protects against sudden, high costs from conditions that can develop even in currently healthy individuals

**Explanation:** *Insurance protects against potentially high future costs from conditions that could develop even in someone who is currently healthy.*

**Question 247**

**Why is COVID-19 vaccination guidance described as continuing to 'evolve' rather than being fixed permanently?**

**A.** Because vaccines never change once developed
**B.** Because the virus continues to evolve, requiring updated recommendations, especially for high-risk groups
**C.** Because vaccination is no longer relevant at all
**D.** Because guidance changes are purely arbitrary with no scientific basis

**Correct Answer:** Option (B) — Because the virus continues to evolve, requiring updated recommendations, especially for high-risk groups

**Explanation:** *Since the virus itself continues to evolve, vaccination recommendations are periodically updated, especially for high-risk individuals.*

**Question 248**

**Why is it important to distinguish viral from bacterial infections before deciding on treatment?**

**A.** Because the distinction has no bearing on appropriate treatment
**B.** Because bacterial infections may respond to antibiotics, while viral infections generally do not
**C.** Because viral infections always require stronger medication than bacterial ones
**D.** Because bacteria and viruses are treated identically in all cases

**Correct Answer:** Option (B) — Because bacterial infections may respond to antibiotics, while viral infections generally do not

**Explanation:** *Since antibiotics work against bacteria but not viruses, correctly distinguishing between the two is essential for appropriate treatment.*

**Question 249**

**Why does India's malaria elimination progress (a significant drop in cases) matter in the context of vector-borne disease control?**

**A.** Because it shows vector control efforts have had no measurable impact

**B.** Because it demonstrates that sustained, coordinated public health efforts can substantially reduce disease burden

**C.** Because malaria was never a serious concern in India

**D.** Because the decline is unrelated to any government programme

**Correct Answer:** Option (B) — Because it demonstrates that sustained, coordinated public health efforts can substantially reduce disease burden

**Explanation:** *A substantial drop in malaria cases demonstrates that sustained, coordinated public health efforts can meaningfully reduce disease burden over time.*

**Question 250**

**Why is 'stopping antibiotics early' particularly problematic on a public health scale, not just for the individual?**

**A.** Because it has no effect beyond the individual taking the medication

**B.** Because it can contribute to broader antibiotic resistance, making future infections harder to treat for the wider population

**C.** Because early stopping always improves treatment outcomes

**D.** Because antibiotic resistance is not a genuine public health concern

**Correct Answer:** Option (B) — Because it can contribute to broader antibiotic resistance, making future infections harder to treat for the wider population

**Explanation:** *Antibiotic resistance resulting from improper use can spread and affect treatment options for the wider population, not just the individual.*

**Question 251**

**Why is 'confidentiality' emphasised as a core part of professional mental health support in India?**

**A.** Because confidentiality has no real importance in mental healthcare

**B.** Because confidentiality helps people feel safe enough to seek help honestly, without fear of judgement or exposure

**C.** Because confidentiality only applies to physical health records

**D.** Because mental health services in India do not actually maintain confidentiality

**Correct Answer:** Option (B) — Because confidentiality helps people feel safe enough to seek help honestly, without fear of judgement or exposure

**Explanation:** *Confidentiality helps people feel safe seeking help honestly, which is essential for effective mental health support.*

**Question 252**

**What is the MANAS app used for?**

**A.** Booking train tickets

**B.** Guided meditation, mood tracking, and relaxation tools

**C.** Filing tax returns

**D.** Applying for government jobs

**Correct Answer:** Option (B) — Guided meditation, mood tracking, and relaxation tools

**Explanation:** *The MANAS app is a free government wellness tool offering guided meditation, mood tracking, and relaxation resources.*

**Question 253**

**Why might 'building small habits like sleep, movement, and connection' be described as foundational to mental well-being, rather than optional extras?**

**A.** Because these basics have no real connection to mental health outcomes

**B.** Because consistent attention to these fundamentals supports resilience and emotional stability over time

**C.** Because only clinical treatment matters for mental health, not daily habits

**D.** Because these habits are only relevant to physical health, not mental health

**Correct Answer:** Option (B) — Because consistent attention to these fundamentals supports resilience and emotional stability over time

**Explanation:** *These fundamentals support emotional stability and resilience over time, making them foundational rather than optional for mental well-being.*

**Question 254**

**What is a healthy work-life balance practice?**

**A.** Working without any breaks throughout the day
**B.** Setting clear boundaries around work hours where possible
**C.** Avoiding all rest and hobbies
**D.** Ignoring signs of exhaustion

**Correct Answer:** Option (B) — Setting clear boundaries around work hours where possible

**Explanation:** *Setting clear boundaries around work hours, where possible, supports a healthier balance between work and personal life.*

**Question 255**

**Why might someone incorrectly avoid discussing their feelings out of fear of 'burdening' others?**

**A.** Because sharing feelings always burdens the listener significantly
**B.** Because this fear can prevent someone from getting support, even though trusted people are often willing and able to help
**C.** Because feelings should never be discussed under any circumstance
**D.** Because this fear is always an accurate reflection of how others will react

**Correct Answer:** Option (B) — Because this fear can prevent someone from getting support, even though trusted people are often willing and able to help

**Explanation:** *This fear can prevent someone from seeking support they need, even though trusted people are often willing and able to help.*

**Question 256**

**A working professional notices constant exhaustion, cynicism about work, and reduced sense of accomplishment. What does this combination suggest?**

**A.** A common cold
**B.** Signs consistent with burnout
**C.** A sign of improved productivity
**D.** No cause for any concern

**Correct Answer:** Option (B) — Signs consistent with burnout

**Explanation:** *Exhaustion, cynicism, and reduced accomplishment are classic signs consistent with burnout from prolonged work stress.*

**Question 257**

**Why might excessive social media use affect mental well-being?**

**A.** It has no effect on mood or sleep whatsoever
**B.** It can contribute to social comparison, disrupted sleep, and reduced focus
**C.** It always improves mental health
**D.** It only affects physical health, not mental health

**Correct Answer:** Option (B) — It can contribute to social comparison, disrupted sleep, and reduced focus

**Explanation:** *Excessive social media use can contribute to social comparison, disrupted sleep, and reduced focus, affecting overall well-being.*

**Question 258**

**Why might 'children don't really experience stress or anxiety' be specifically flagged as a myth in family-oriented mental health guidance?**

**A.** Because this belief can lead parents to dismiss or overlook a child's genuine emotional struggles
**B.** Because children are medically incapable of experiencing stress
**C.** Because this belief is entirely accurate and requires no correction
**D.** Because stress and anxiety only develop after adulthood

**Correct Answer:** Option (A) — Because this belief can lead parents to dismiss or overlook a child's genuine emotional struggles

**Explanation:** *Believing children don't experience real stress can lead parents to dismiss genuine struggles, missing opportunities for timely support.*

**Question 259**

**Is it normal to feel anxious occasionally?**

**A.** No, any anxiety indicates a serious disorder
**B.** Yes, occasional anxiety is a normal response to stress
**C.** No, anxiety never occurs in healthy individuals
**D.** Yes, but only in children

**Correct Answer:** Option (B) — Yes, occasional anxiety is a normal response to stress

**Explanation:** *Occasional anxiety is a normal human response to stress; it becomes a concern mainly when persistent or disruptive.*

**Question 260**

**What is a healthy way to respond to a colleague who seems constantly exhausted and withdrawn at work?**

**A.** Ignore the change since it's not your concern
**B.** Check in with them gently, without judgement, and let them know support is available
**C.** Report them to management immediately without speaking to them first
**D.** Assume they are simply lazy

**Correct Answer:** Option (B) — Check in with them gently, without judgement, and let them know support is available

**Explanation:** *Checking in gently and without judgement, while letting a colleague know support is available, is a caring and appropriate response.*

**Question 261**

**Why might reducing caffeine intake be suggested as part of managing anxiety?**

**A.** Because caffeine has no physiological effects relevant to anxiety
**B.** Because caffeine can contribute to physical symptoms like a racing heart, which can overlap with or worsen anxious feelings
**C.** Because caffeine is the sole cause of all anxiety
**D.** Because reducing caffeine guarantees complete elimination of anxiety

**Correct Answer:** Option (B) — Because caffeine can contribute to physical symptoms like a racing heart, which can overlap with or worsen anxious feelings

**Explanation:** *Caffeine can contribute to physical symptoms like a racing heart, which may overlap with or intensify feelings of anxiety.*

**Question 262**

**What is a healthy way to manage sudden anxiety?**

**A.** Avoid breathing techniques entirely
**B.** Try slow, deep breathing or a grounding technique
**C.** Ignore it completely with no response
**D.** Increase caffeine intake immediately

**Correct Answer:** Option (B) — Try slow, deep breathing or a grounding technique

**Explanation:** *Slow, deep breathing and grounding techniques are healthy, accessible ways to manage sudden anxiety.*

**Question 263**

**Why is 'stigma' identified as a barrier to mental health treatment, distinct from lack of access to services?**

**A.** Because stigma and access are the exact same barrier
**B.** Because even where services exist, shame or fear of judgement can independently prevent people from seeking help
**C.** Because stigma has no real effect on whether people seek care
**D.** Because access is always guaranteed once stigma is addressed

**Correct Answer:** Option (B) — Because even where services exist, shame or fear of judgement can independently prevent people from seeking help

**Explanation:** *Stigma can independently prevent people from seeking help even when services are technically available, making it a distinct barrier from access alone.*

**Question 264**

**What is a common sign that may be associated with depression?**

**A.** Increased energy and motivation
**B.** Persistent low mood and loss of interest in activities, lasting most of the day for two weeks or more
**C.** Improved sleep quality
**D.** Excessive social engagement

**Correct Answer:** Option (B) — Persistent low mood and loss of interest in activities, lasting most of the day for two weeks or more

**Explanation:** *Persistent low mood and loss of interest lasting most of the day for two weeks or more may be associated with depression.*

**Question 265**

**What is 'burnout'?**

**A.** A sudden physical injury
**B.** Exhaustion caused by prolonged, unmanaged work-related stress
**C.** A type of viral infection
**D.** A permanent, untreatable condition

**Correct Answer:** Option (B) — Exhaustion caused by prolonged, unmanaged work-related stress

**Explanation:** *Burnout is exhaustion resulting from prolonged, unmanaged stress, often linked to work, and includes cynicism and reduced accomplishment.*

**Question 266**

**Is therapy only appropriate for people in crisis?**

**A.** Yes, therapy should only be used during a crisis
**B.** No, many people use therapy proactively for general well-being and growth
**C.** Yes, otherwise it is a waste of resources
**D.** No, therapy has no proactive value at all

**Correct Answer:** Option (B) — No, many people use therapy proactively for general well-being and growth

**Explanation:** *Therapy is commonly used proactively for general well-being and personal growth, not only during a crisis.*

**Question 267**

**Why is avoiding screens 30–60 minutes before bed recommended for better sleep?**

**A.** Because screens have no effect on sleep hormones
**B.** Because screen light can disrupt the body's natural sleep-related hormone signals
**C.** Because screens are only a distraction, with no biological effect
**D.** Because this recommendation applies only to children

**Correct Answer:** Option (B) — Because screen light can disrupt the body's natural sleep-related hormone signals

**Explanation:** *Screen light exposure close to bedtime can disrupt the body's natural signals for sleep-related hormones, affecting sleep quality.*

**Question 268**

**Why might a family's openness about discussing mental health topics benefit a teenager specifically?**

**A.** Because teenagers never experience genuine mental health concerns
**B.** Because open family communication supports healthy emotional development and reduces stigma around seeking help
**C.** Because discussing mental health has no bearing on teenage well-being
**D.** Because openness only matters for adult family members

**Correct Answer:** Option (B) — Because open family communication supports healthy emotional development and reduces stigma around seeking help

**Explanation:** *Open family communication supports healthy emotional development in teenagers and reduces the stigma that might otherwise prevent them from seeking help.*

**Question 269**

**What is mindfulness?**

**A.** Ignoring your emotions completely
**B.** Paying deliberate, non-judgemental attention to the present moment
**C.** A form of medication
**D.** A type of physical exercise only

**Correct Answer:** Option (B) — Paying deliberate, non-judgemental attention to the present moment

**Explanation:** *Mindfulness involves paying deliberate, non-judgemental attention to the present moment, often through breathing or awareness exercises.*

**Question 270**

**Why does mental health awareness content specifically caution against 'comparing your inner struggles to someone else's outward appearance of being fine'?**

**A.** Because outward appearance always accurately reflects a person's true mental state
**B.** Because this comparison can be misleading, since people's visible behaviour doesn't necessarily reflect their true internal experience
**C.** Because inner struggles are never relevant to how someone appears outwardly
**D.** Because comparison to others is always a helpful and accurate practice

**Correct Answer:** Option (B) — Because this comparison can be misleading, since people's visible behaviour doesn't necessarily reflect their true internal experience

**Explanation:** *A person's outward appearance doesn't necessarily reflect their true internal state, making such comparisons potentially misleading and unhelpful.*

**Question 271**

**What is the free, 24x7 government mental health helpline in India?**

**A.** 108
**B.** Tele-MANAS (14416)
**C.** 1098
**D.** 101

**Correct Answer:** Option (B) — Tele-MANAS (14416)

**Explanation:** *Tele-MANAS, reachable at 14416, is India's free, confidential, 24x7 government mental health helpline.*

**Question 272**

**Why might 'people with depression can just snap out of it' be considered an inaccurate and harmful myth?**

**A.** Because depression is a genuine health condition that usually needs support and sometimes treatment to improve, not simple willpower
**B.** Because this statement is completely accurate and helpful
**C.** Because depression always resolves instantly without any support
**D.** Because willpower is the only factor relevant to depression

**Correct Answer:** Option (A) — Because depression is a genuine health condition that usually needs support and sometimes treatment to improve, not simple willpower

**Explanation:** *Depression is a genuine health condition, and dismissing it as something to simply 'snap out of' ignores the real support many people need to recover.*

**Question 273**

**What is a simple grounding technique mentioned in mental health awareness content?**

**A.** Counting only backward from 100
**B.** Noticing 5 things you can see, 4 you can hear, and 3 you can touch
**C.** Avoiding all sensory input
**D.** Sleeping immediately

**Correct Answer:** Option (B) — Noticing 5 things you can see, 4 you can hear, and 3 you can touch

**Explanation:** *The 5-4-3-2-1 grounding technique helps anchor a person in the present moment using their senses.*

**Question 274**

**Why does mental health guidance recommend approaching a struggling friend with empathy rather than comparison to others?**

**A.** Because comparison always helps motivate a struggling person
**B.** Because empathy validates their experience, while comparison can minimise or dismiss what they're genuinely going through
**C.** Because empathy has no real effect on someone's well-being
**D.** Because struggling individuals should be left alone entirely

**Correct Answer:** Option (B) — Because empathy validates their experience, while comparison can minimise or dismiss what they're genuinely going through

**Explanation:** *Empathy validates a person's experience, while comparing their situation to others can minimise or dismiss what they're genuinely feeling.*

**Question 275**

**Why might 'small, consistent habits' be emphasised over 'occasional big efforts' for mental well-being?**

**A.** Because occasional big efforts are always more effective
**B.** Because consistent habits like sleep, movement, and connection build resilience more reliably over time than sporadic effort
**C.** Because consistency has no real bearing on mental well-being
**D.** Because big efforts and small habits produce identical results

**Correct Answer:** Option (B) — Because consistent habits like sleep, movement, and connection build resilience more reliably over time than sporadic effort

**Explanation:** *Consistent daily habits tend to build long-term resilience more reliably than occasional, sporadic bursts of effort.*

**Question 276**

**What does the National Mental Health Programme (NMHP) represent in India?**

**A.** A one-time awareness event
**B.** India's overarching policy framework for mental health care, in place since 1982
**C.** A private insurance product
**D.** A university entrance examination

**Correct Answer:** Option (B) — India's overarching policy framework for mental health care, in place since 1982

**Explanation:** *The NMHP is India's long-standing overarching policy framework guiding mental health care nationally since 1982.*

**Question 277**

**Why does 'treatment gap' matter as a concept in India's mental health context?**

**A.** Because it reflects the difference between people needing mental health care and those receiving it, highlighting an awareness and access issue
**B.** Because it has no real significance for public health planning
**C.** Because it only refers to physical healthcare metrics
**D.** Because a smaller treatment gap always indicates fewer people need care

**Correct Answer:** Option (A) — Because it reflects the difference between people needing mental health care and those receiving it, highlighting an awareness and access issue

**Explanation:** *The treatment gap reveals how many people who need mental health care are not receiving it, highlighting a genuine awareness and access challenge.*

**Question 278**

**Why does mental health awareness content emphasise that 'needing support is no different from needing support for a physical illness'?**

**A.** Because mental and physical health are completely unrelated
**B.** Because this framing helps reduce stigma and normalise seeking help for mental health concerns
**C.** Because physical illnesses never require any support
**D.** Because mental health concerns are less legitimate than physical ones

**Correct Answer:** Option (B) — Because this framing helps reduce stigma and normalise seeking help for mental health concerns

**Explanation:** *Comparing mental health support to physical health support helps normalise help-seeking and reduce the stigma often attached to mental health concerns.*

**Question 279**

**A father notices his teenager withdrawing and spending most nights alone on their phone. What is a supportive first step?**

**A.** Confront them immediately with accusations
**B.** Start an open, non-judgemental conversation to understand what's happening
**C.** Ignore the behaviour completely
**D.** Take away all devices without any discussion

**Correct Answer:** Option (B) — Start an open, non-judgemental conversation to understand what's happening

**Explanation:** *An open, non-judgemental conversation is a supportive first step that helps understand what the teenager might be experiencing.*

**Question 280**

**Why might 'talking openly about menstruation, ageing, or mental health' share a common purpose across different JanGyan modules?**

**A.** Because open conversation about sensitive but normal topics reduces stigma and encourages timely support-seeking
**B.** Because these topics have no meaningful connection to each other
**C.** Because open conversation is discouraged in all official health guidance
**D.** Because only one of these topics benefits from open discussion

**Correct Answer:** Option (A) — Because open conversation about sensitive but normal topics reduces stigma and encourages timely support-seeking

**Explanation:** *Across different areas, normalising conversation about sensitive but common topics helps reduce stigma and encourages people to seek support in time.*

**Question 281**

**A person feels that seeking therapy means 'something is wrong' with them. How does mental health awareness content address this belief?**

**A.** By confirming the belief is accurate
**B.** By reframing therapy as a proactive wellness tool used by many people for general growth, not only in crisis
**C.** By suggesting therapy should be avoided entirely
**D.** By stating therapy is only for people with 'something wrong'

**Correct Answer:** Option (B) — By reframing therapy as a proactive wellness tool used by many people for general growth, not only in crisis

**Explanation:** *Mental health awareness content reframes therapy as a proactive tool for growth and well-being, used by many people beyond crisis situations.*

**Question 282**

**Do children and teenagers experience genuine stress and anxiety?**

**A.** No, only adults experience real stress
**B.** Yes, young people experience genuine mental health struggles and benefit from open conversation
**C.** No, children are incapable of feeling anxious
**D.** Yes, but only after age 18

**Correct Answer:** Option (B) — Yes, young people experience genuine mental health struggles and benefit from open conversation

**Explanation:** *Children and teenagers genuinely experience stress and anxiety, and benefit from open, supportive conversation about it.*

**Question 283**

**Why might a workplace benefit from encouraging regular breaks throughout the day, not just at day's end?**

**A.** Because breaks only at the end of the day fully prevent burnout
**B.** Because regular breaks throughout the day may help manage stress and prevent burnout more effectively than end-of-day rest alone
**C.** Because breaks have no measurable effect on stress or productivity
**D.** Because employees should avoid all breaks to maximise output

**Correct Answer:** Option (B) — Because regular breaks throughout the day may help manage stress and prevent burnout more effectively than end-of-day rest alone

**Explanation:** *Distributing breaks throughout the day, rather than only resting at the end, can more effectively manage stress and reduce burnout risk.*

**Question 284**

**Why does mental health guidance recommend against waiting for a 'serious enough' reason before calling a helpline like Tele-MANAS?**

**A.** Because helplines are only meant for extreme emergencies
**B.** Because support is available and valuable at every stage, and waiting can delay helpful intervention unnecessarily
**C.** Because Tele-MANAS charges a fee for non-serious calls
**D.** Because most calls to Tele-MANAS are rejected if not urgent

**Correct Answer:** Option (B) — Because support is available and valuable at every stage, and waiting can delay helpful intervention unnecessarily

**Explanation:** *Waiting for a 'serious enough' reason can unnecessarily delay accessing support that could help at any stage of difficulty.*

**Question 285**

**What is stress?**

**A.** A rare medical condition affecting only a few people
**B.** The body's natural response to pressure or demand
**C.** A permanent personality trait
**D.** A type of infectious illness

**Correct Answer:** Option (B) — The body's natural response to pressure or demand

**Explanation:** *Stress is the body's natural response to pressure or demand, and can be either helpful in small doses or harmful in excess.*

**Question 286**

**Why is 'only serious cases need professional help' considered a myth in mental health awareness?**

**A.** Because this statement is completely accurate
**B.** Because support is valuable at every stage, and waiting for a crisis is not necessary or recommended
**C.** Because professional help is never actually useful
**D.** Because 'serious cases' cannot be defined at all

**Correct Answer:** Option (B) — Because support is valuable at every stage, and waiting for a crisis is not necessary or recommended

**Explanation:** *Support is valuable at every stage of difficulty, and this myth can discourage people from seeking help before a situation becomes more serious.*

**Question 287**

**What does the Mental Healthcare Act, 2017 do regarding suicide attempts?**

**A.** It increases criminal penalties for suicide attempts
**B.** It decriminalises suicide attempts, treating them as a call for help rather than a crime
**C.** It has no relevance to suicide at all
**D.** It only applies to attempted suicide by minors

**Correct Answer:** Option (B) — It decriminalises suicide attempts, treating them as a call for help rather than a crime

**Explanation:** *The Mental Healthcare Act, 2017 decriminalises suicide attempts, reframing them as a call for care rather than a criminal offence.*

**Question 288**

**Which of the following supports good sleep hygiene?**

**A.** Using screens right before bed
**B.** Consistent sleep and wake times
**C.** Drinking caffeine late at night
**D.** An inconsistent bedtime schedule

**Correct Answer:** Option (B) — Consistent sleep and wake times

**Explanation:** *Keeping consistent sleep and wake times helps regulate the body's internal clock, supporting better sleep.*

**Question 289**

**What is a practical first step for someone unsure whether they need mental health support?**

**A.** Wait until things become unbearable before acting
**B.** Call Tele-MANAS for a free, confidential conversation, even without a formal diagnosis
**C.** Avoid discussing it with anyone
**D.** Assume support is only for 'serious' cases

**Correct Answer:** Option (B) — Call Tele-MANAS for a free, confidential conversation, even without a formal diagnosis

**Explanation:** *Calling Tele-MANAS is a low-barrier first step, since support is available at every stage, not only during a crisis.*

**Question 290**

**Why does the Mental Healthcare Act, 2017 protect the 'rights and dignity of persons with mental illness'?**

**A.** Because dignity and rights have no relevance to healthcare law
**B.** Because protecting rights and dignity helps reduce stigma and discrimination historically faced by people with mental illness
**C.** Because this protection only applies to physical health conditions
**D.** Because mental illness does not require any legal protection

**Correct Answer:** Option (B) — Because protecting rights and dignity helps reduce stigma and discrimination historically faced by people with mental illness

**Explanation:** *Protecting rights and dignity helps address the stigma and discrimination that people with mental illness have historically faced.*

**Question 291**

**Why is it important that a caller to Tele-MANAS does not need a referral or formal diagnosis first?**

**A.** Because this removes an unnecessary barrier, making it easier for people to seek help early rather than waiting for a formal process
**B.** Because referrals and diagnoses are required for all forms of healthcare access
**C.** Because Tele-MANAS only accepts callers with formal referrals
**D.** Because this detail has no practical significance for accessibility

**Correct Answer:** Option (A) — Because this removes an unnecessary barrier, making it easier for people to seek help early rather than waiting for a formal process

**Explanation:** *Not requiring a referral or diagnosis removes a barrier, making it easier for people to seek help early rather than delaying for a formal process.*

**Question 292**

**Why might normalising conversations about mental health at home be considered protective for an entire family, not just one member?**

**A.** Because open conversation only benefits the specific person struggling
**B.** Because a family culture of openness makes it more likely that any member experiencing difficulty will feel comfortable seeking support
**C.** Because mental health conversations should be confined strictly to professional settings
**D.** Because family-level openness has no bearing on individual outcomes

**Correct Answer:** Option (B) — Because a family culture of openness makes it more likely that any member experiencing difficulty will feel comfortable seeking support

**Explanation:** *A family culture of openness makes it more likely that any member facing difficulty will feel comfortable seeking support when needed.*

**Question 293**

**A student feels persistently unmotivated and low for several weeks, affecting daily activities. What is an appropriate response?**

**A.** Dismiss it as 'just a phase' with no further action
**B.** Talk to a trusted person and consider calling Tele-MANAS for guidance
**C.** Isolate further until it resolves on its own
**D.** Assume it cannot be discussed with anyone

**Correct Answer:** Option (B) — Talk to a trusted person and consider calling Tele-MANAS for guidance

**Explanation:** *Persistent low mood affecting daily life for weeks warrants talking to someone and considering professional guidance through a resource like Tele-MANAS.*

**Question 294**

**Why is 'mental health exists on a spectrum' considered a more accurate model than a simple 'healthy vs unwell' divide?**

**A.** Because a person's mental state can shift between thriving, coping, struggling, and being unwell depending on circumstances
**B.** Because mental health never actually changes for any individual
**C.** Because a binary divide is scientifically more accurate
**D.** Because a spectrum model has no practical use in awareness education

**Correct Answer:** Option (A) — Because a person's mental state can shift between thriving, coping, struggling, and being unwell depending on circumstances

**Explanation:** *The spectrum model reflects how people genuinely move between different states of well-being over time, rather than existing in a fixed, binary category.*

**Question 295**

**What is the difference between a psychologist and a psychiatrist?**

**A.** They are exactly the same profession
**B.** A psychiatrist is a medical doctor who can prescribe medication; a psychologist provides therapy without prescribing
**C.** A psychologist can prescribe medication but a psychiatrist cannot
**D.** Neither can provide any form of therapy

**Correct Answer:** Option (B) — A psychiatrist is a medical doctor who can prescribe medication; a psychologist provides therapy without prescribing

**Explanation:** *A psychiatrist is a medical doctor who can prescribe medication, while a psychologist typically provides therapy without prescribing.*

**Question 296**

**According to general health guidance, mental health includes emotional, psychological, and which other kind of well-being?**

**A.** Financial
**B.** Social
**C.** Academic
**D.** Political

**Correct Answer:** Option (B) — Social

**Explanation:** *Mental health covers emotional, psychological, and social well-being, affecting how a person copes, relates, and thinks.*

**Question 297**

**A person wants to improve their digital well-being. Which action best reflects healthy practice?**

**A.** Checking messages and social media constantly throughout the day
**B.** Setting specific times to check messages rather than constantly, and reducing notifications
**C.** Keeping the phone in the bedroom at all times
**D.** Ignoring how specific apps make them feel

**Correct Answer:** Option (B) — Setting specific times to check messages rather than constantly, and reducing notifications

**Explanation:** *Setting specific times for checking messages and reducing notifications are practical steps toward healthier digital habits.*

**Question 298**

**What does the District Mental Health Programme (DMHP) provide?**

**A.** Only hospital-building services
**B.** Mental health services delivered at the district level, closer to where people live
**C.** Only emergency ambulance services
**D.** Only services for government employees

**Correct Answer:** Option (B) — Mental health services delivered at the district level, closer to where people live

**Explanation:** *The DMHP delivers mental health services at the district level, making care more locally accessible.*

**Question 299**

**How many languages is Tele-MANAS available in?**

**A.** Only English
**B.** Only Hindi
**C.** Over 20 languages
**D.** Only 2 languages

**Correct Answer:** Option (C) — Over 20 languages

**Explanation:** *Tele-MANAS offers support in English and over 20 regional languages, making it broadly accessible.*

**Question 300**

**Why might treating 'talking about problems' as something that 'makes them worse' be considered a myth?**

**A.** Because talking always worsens any situation
**B.** Because talking to a trusted person or professional is one of the most effective ways to feel better
**C.** Because this statement is completely accurate
**D.** Because problems should never be discussed with anyone

**Correct Answer:** Option (B) — Because talking to a trusted person or professional is one of the most effective ways to feel better

**Explanation:** *Talking to a trusted person or professional is widely recognised as one of the most effective ways to process and improve difficult feelings.*

**Question 301**

**What is India's official standard for safe drinking water quality?**

**A.** BIS 10500
**B.** FSSAI 2020
**C.** ISO 9001
**D.** NABL 500

**Correct Answer:** Option (A) — BIS 10500

**Explanation:** *BIS 10500 is India's official benchmark standard for safe drinking water quality.*

**Question 302**

**Why is 'building movement into an existing routine' considered more sustainable than relying on a gym membership alone?**

**A.** Because gym memberships are always the most effective fitness solution
**B.** Because integrating movement into daily routines removes dependency on a specific facility or schedule, making consistency easier
**C.** Because gym-based exercise has no real fitness benefit
**D.** Because routine-based movement is always less effective than gym workouts

**Correct Answer:** Option (B) — Because integrating movement into daily routines removes dependency on a specific facility or schedule, making consistency easier

**Explanation:** *Integrating movement into an existing daily routine removes dependency on a specific facility, often making long-term consistency easier to maintain.*

**Question 303**

**Why does general guidance caution against extreme, rapid dietary changes in favour of gradual adjustment?**

**A.** Because extreme changes are always more effective long-term
**B.** Because gradual adjustments are more sustainable and easier to maintain as lasting habits
**C.** Because gradual change has no real advantage over sudden change
**D.** Because extreme changes carry no additional risk

**Correct Answer:** Option (B) — Because gradual adjustments are more sustainable and easier to maintain as lasting habits

**Explanation:** *Gradual dietary adjustments tend to be more sustainable and easier to maintain as lasting habits compared to sudden, extreme changes.*

**Question 304**

**Why does general guidance recommend keeping healthier snacks like fruit or roasted chana accessible at home?**

**A.** Because it has no effect on actual snacking behaviour
**B.** Because easy access to healthier options can reduce reliance on packaged, ultra-processed snacks
**C.** Because healthier snacks are always more expensive
**D.** Because packaged snacks provide superior nutrition

**Correct Answer:** Option (B) — Because easy access to healthier options can reduce reliance on packaged, ultra-processed snacks

**Explanation:** *Keeping healthier snacks accessible makes it easier to choose them over packaged, ultra-processed alternatives when hunger strikes.*

**Question 305**

**Why is 'consistent meal timing' considered beneficial, according to healthy eating habit guidance?**

**A.** Because meal timing has no effect on digestion or energy levels
**B.** Because consistent timing may support better digestion and more stable energy levels throughout the day
**C.** Because irregular meal timing always improves metabolism
**D.** Because meal timing is purely a cultural preference with no health basis

**Correct Answer:** Option (B) — Because consistent timing may support better digestion and more stable energy levels throughout the day

**Explanation:** *Eating at roughly consistent times can support better digestion and help maintain more stable energy levels through the day.*

**Question 306**

**How many minutes of moderate physical activity are recommended weekly for adults?**

**A.** At least 150 minutes
**B.** Only 10 minutes
**C.** 500 minutes
**D.** None, if diet is healthy

**Correct Answer:** Option (A) — At least 150 minutes

**Explanation:** *At least 150 minutes of moderate physical activity weekly, such as brisk walking, is the standard recommendation.*

**Question 307**

**Why does hydration guidance suggest slightly higher water intake for pregnant women, per ICMR-NIN guidance?**

**A.** Because pregnancy has no effect on hydration needs
**B.** Because increased physiological demands during pregnancy generally raise fluid requirements
**C.** Because this recommendation has no scientific basis
**D.** Because pregnant women should actually reduce water intake

**Correct Answer:** Option (B) — Because increased physiological demands during pregnancy generally raise fluid requirements

**Explanation:** *Pregnancy increases physiological demands on the body, which generally raises fluid requirements compared to a non-pregnant adult.*

**Question 308**

**Why might 'thirst and urine colour' be mentioned as practical hydration indicators alongside general litre guidelines?**

**A.** Because these indicators have no practical value
**B.** Because individual hydration needs vary, and these simple signals help adjust intake beyond a fixed general number
**C.** Because thirst is always an unreliable indicator
**D.** Because urine colour has no connection to hydration status

**Correct Answer:** Option (B) — Because individual hydration needs vary, and these simple signals help adjust intake beyond a fixed general number

**Explanation:** *Since hydration needs vary by individual and activity level, simple indicators like thirst and urine colour help adjust intake beyond a fixed general guideline.*

**Question 309**

**What is a recommended action for someone wanting to start exercising but with no gym access?**

**A.** Avoid any physical activity entirely
**B.** Start with a brisk walk and build up gradually
**C.** Attempt intense workouts immediately
**D.** Wait until a gym membership is affordable

**Correct Answer:** Option (B) — Start with a brisk walk and build up gradually

**Explanation:** *Starting with a brisk walk and building up gradually is an accessible way to begin exercising without needing a gym.*

**Question 310**

**Which of these is part of good hydration practice?**

**A.** Drinking water only when already very thirsty
**B.** Drinking water consistently throughout the day
**C.** Avoiding water during physical activity
**D.** Replacing all water with sugary drinks

**Correct Answer:** Option (B) — Drinking water consistently throughout the day

**Explanation:** *Drinking water consistently throughout the day, rather than only when very thirsty, supports better hydration.*

**Question 311**

**Why might 'fat-free' or 'sugar-free' labelling be potentially misleading?**

**A.** Because such products can still be high in other unhealthy ingredients
**B.** Because these labels are always completely accurate indicators of health
**C.** Because fat-free products never exist in reality
**D.** Because sugar-free products are illegal in India

**Correct Answer:** Option (A) — Because such products can still be high in other unhealthy ingredients

**Explanation:** *Products labelled 'fat-free' or 'sugar-free' can still contain other unhealthy ingredients, so checking the full label matters.*

**Question 312**

**A person skips breakfast regularly to 'save calories.' What is a likely consequence based on general nutrition guidance?**

**A.** Consistently improved metabolism
**B.** Potential overeating later in the day and disrupted eating patterns
**C.** Guaranteed weight loss with no downsides
**D.** No effect on eating patterns at all

**Correct Answer:** Option (B) — Potential overeating later in the day and disrupted eating patterns

**Explanation:** *Skipping meals like breakfast can lead to overeating later and disrupt overall eating patterns, rather than reliably aiding weight loss.*

**Question 313**

**Why is checking whether tap water is BIS 10500-tested or Jal Jeevan Mission-connected a useful precaution?**

**A.** Because such water is guaranteed to taste better
**B.** Because it helps confirm the water meets recognised safety standards for drinking
**C.** Because this check has no real bearing on water safety
**D.** Because untested water is always completely safe regardless

**Correct Answer:** Option (B) — Because it helps confirm the water meets recognised safety standards for drinking

**Explanation:** *Confirming a recognised safety standard helps ensure the water is genuinely safe for drinking, rather than assuming safety without verification.*

**Question 314**

**What does the Jal Jeevan Mission aim to provide?**

**A.** Free mobile phones
**B.** Safe piped drinking water to rural households
**C.** Free school uniforms
**D.** Subsidised electricity

**Correct Answer:** Option (B) — Safe piped drinking water to rural households

**Explanation:** *The Jal Jeevan Mission provides safe piped tap water connections to rural households across India.*

**Question 315**

**Under Indian food labelling regulations, how many major allergens must be clearly declared on packaged food?**

**A.** 2
**B.** 4
**C.** 8
**D.** 20

**Correct Answer:** Option (C) — 8

**Explanation:** *Indian food labelling regulations require the 8 major allergens to be clearly declared on packaged food products.*

**Question 316**

**Which regulatory body oversees food labelling requirements in India?**

**A.** FSSAI
**B.** IRDAI
**C.** NOTTO
**D.** NDMA

**Correct Answer:** Option (A) — FSSAI

**Explanation:** *The Food Safety and Standards Authority of India (FSSAI) regulates food safety and labelling requirements.*

**Question 317**

**According to ICMR-NIN's 'My Plate for the Day' model, what proportion of the plate should be vegetables and fruits?**

**A.** About a quarter
**B.** About half
**C.** Almost the entire plate
**D.** A very small portion

**Correct Answer:** Option (B) — About half

**Explanation:** *The 'My Plate for the Day' model recommends filling about half the plate with vegetables, fruits, and green leafy vegetables.*

**Question 318**

**A family relies heavily on packaged, processed food due to a busy schedule. What is the most balanced improvement suggestion?**

**A.** Eliminate all packaged food immediately with no transition

**B.** Gradually increase home-cooked, whole-ingredient meals while still reading labels on packaged items used

**C.** Continue exactly as before since convenience matters most

**D.** Replace all meals with a single 'health' product

**Correct Answer:** Option (B) — Gradually increase home-cooked, whole-ingredient meals while still reading labels on packaged items used

**Explanation:** *A gradual shift toward more home-cooked meals, combined with informed label-reading for packaged items still used, is a balanced, sustainable approach.*

**Question 319**

**Why is 'a single dramatic diet change' generally considered less effective than incremental habit-building, according to healthy living guidance?**

**A.** Because dramatic changes are always easier to sustain than small ones

**B.** Because incremental changes are typically easier to sustain and build genuine long-term habits, unlike abrupt, hard-to-maintain shifts

**C.** Because incremental change has no real advantage over dramatic change

**D.** Because dramatic diet changes carry no risk of being abandoned

**Correct Answer:** Option (B) — Because incremental changes are typically easier to sustain and build genuine long-term habits, unlike abrupt, hard-to-maintain shifts

**Explanation:** *Incremental habit-building is typically easier to sustain over the long term, while abrupt, dramatic changes are often harder to maintain.*

**Question 320**

**Roughly how much water should most adults drink daily, according to general guidance?**

**A.** 0.5 litres

**B.** 2.5–3 litres

**C.** 10 litres

**D.** Only when exercising

**Correct Answer:** Option (B) — 2.5–3 litres

**Explanation:** *Roughly 2.5–3 litres (about 8–10 glasses) daily is a general guideline for most adults.*

**Question 321**

**What is a simple way to build a healthier daily routine?**

**A.** Overhaul every habit at once

**B.** Pick one habit, like a daily walk, and build consistency before adding more

**C.** Avoid any structured routine entirely

**D.** Only focus on weekends

**Correct Answer:** Option (B) — Pick one habit, like a daily walk, and build consistency before adding more

**Explanation:** *Building one consistent habit at a time, rather than overhauling everything at once, supports sustainable long-term change.*

**Question 322**

**Why might reading food labels be considered a valuable consumer skill rather than an optional habit?**

**A.** Because packaging claims are always fully accurate without verification needed
**B.** Because labels provide the actual nutritional facts needed to make informed choices, which packaging claims alone may not reflect
**C.** Because labels have no legal standing in India
**D.** Because reading labels guarantees weight loss

**Correct Answer:** Option (B) — Because labels provide the actual nutritional facts needed to make informed choices, which packaging claims alone may not reflect

**Explanation:** *Labels provide the actual nutritional facts needed for informed decisions, which marketing claims on packaging alone may not accurately reflect.*

**Question 323**

**Which government initiative encourages regular physical activity across age groups in India?**

**A.** Fit India Movement
**B.** Digital India
**C.** Skill India
**D.** Startup India

**Correct Answer:** Option (A) — Fit India Movement

**Explanation:** *The Fit India Movement, launched in 2019, encourages citizens of all ages to build regular physical activity into daily life.*

**Question 324**

**Which nutrient is the body's main source of energy?**

**A.** Vitamins
**B.** Carbohydrates
**C.** Minerals
**D.** Fibre

**Correct Answer:** Option (B) — Carbohydrates

**Explanation:** *Carbohydrates are the body's main energy source, found in foods like rice, wheat, and millets.*

**Question 325**

**A person's BMI falls in the 'overweight' category, but they feel fit and active. What is the most balanced interpretation?**

**A.** BMI alone provides a complete health verdict
**B.** BMI is one screening indicator among several, and overall health should be discussed with a doctor
**C.** The BMI reading must be inaccurate
**D.** No further consideration is needed beyond the BMI number

**Correct Answer:** Option (B) — BMI is one screening indicator among several, and overall health should be discussed with a doctor

**Explanation:** *BMI is a useful screening tool, but it doesn't capture the complete picture — overall health should be assessed alongside other factors.*

**Question 326**

**Why does the 'My Plate for the Day' model recommend sourcing nutrients from at least 8 food groups?**

**A.** Because a single food group can meet all nutritional needs
**B.** Because greater dietary diversity helps ensure a broader range of essential nutrients is consumed
**C.** Because 8 is simply a traditional number with no nutritional basis
**D.** Because fewer food groups always provide better nutrition

**Correct Answer:** Option (B) — Because greater dietary diversity helps ensure a broader range of essential nutrients is consumed

**Explanation:** *Greater dietary diversity across multiple food groups helps ensure a broader, more complete range of essential nutrients.*

**Question 327**

**Why might 'drinking more water than usual' not always be considered completely harmless, according to balanced nutrition guidance?**

**A.** Because water is always completely risk-free in any quantity
**B.** Because needs vary by person, and extreme excess can occasionally cause its own problems, so moderate, steady intake is best
**C.** Because water intake has no upper limit of any kind
**D.** Because this caution has no basis in any guidance

**Correct Answer:** Option (B) — Because needs vary by person, and extreme excess can occasionally cause its own problems, so moderate, steady intake is best

**Explanation:** *While staying hydrated is important, needs vary by individual, and extreme excess intake can occasionally cause problems, so moderate, steady intake is recommended.*

**Question 328**

**Why might 'losing weight quickly through skipping meals' be specifically challenged as a myth in nutrition awareness content?**

**A.** Because skipping meals is always the fastest, safest way to lose weight
**B.** Because it often leads to overeating later and can disrupt metabolism, making it an unreliable and unhealthy strategy
**C.** Because meal skipping has no effect on metabolism whatsoever
**D.** Because this method is medically endorsed as a primary weight-loss strategy

**Correct Answer:** Option (B) — Because it often leads to overeating later and can disrupt metabolism, making it an unreliable and unhealthy strategy

**Explanation:** *Skipping meals often leads to overeating later and can disrupt metabolism, making it an unreliable and potentially unhealthy weight-loss strategy.*

**Question 329**

**A snack packet claims 'no added sugar' but tastes very sweet. What is the appropriate response?**

**A.** Assume the claim guarantees low sugar content overall
**B.** Check the ingredients list for other sweeteners and the nutrition panel for total sugar
**C.** Ignore the sweetness entirely
**D.** Stop reading labels altogether

**Correct Answer:** Option (B) — Check the ingredients list for other sweeteners and the nutrition panel for total sugar

**Explanation:** *Checking the ingredients list and nutrition panel helps verify whether other sweeteners contribute to the product's overall sugar content.*

**Question 330**

**Why does the 2024 Dietary Guidelines for Indians place sharper warnings on ultra-processed foods specifically?**

**A.** Because ultra-processed foods are recognised as a significant, growing contributor to diet-related health issues
**B.** Because ultra-processed foods are actually beneficial to health
**C.** Because these warnings have no scientific grounding
**D.** Because ultra-processed food consumption has decreased significantly in India

**Correct Answer:** Option (A) — Because ultra-processed foods are recognised as a significant, growing contributor to diet-related health issues

**Explanation:** *Ultra-processed foods are recognised as a significant, growing factor in diet-related health issues, prompting sharper guidance around them.*

**Question 331**

**What does BMI measure?**

**A.** Blood sugar levels
**B.** A screening ratio of weight to height
**C.** Heart rate
**D.** Bone density directly

**Correct Answer:** Option (B) — A screening ratio of weight to height

**Explanation:** *BMI (Body Mass Index) is a simple screening ratio of weight to height used to estimate weight category.*

**Question 332**

**Why might a nutrition awareness platform emphasise both government schemes (like Jal Jeevan Mission) and personal habits (like meal balance) together?**

**A.** Because only government schemes matter for nutrition and hydration outcomes
**B.** Because achieving good nutrition and safe hydration depends on both systemic infrastructure and individual daily choices
**C.** Because personal habits have no bearing on nutrition outcomes
**D.** Because schemes and personal habits address entirely unrelated concerns

**Correct Answer:** Option (B) — Because achieving good nutrition and safe hydration depends on both systemic infrastructure and individual daily choices

**Explanation:** *Good nutrition and hydration outcomes depend on both the infrastructure that schemes like Jal Jeevan Mission provide and the daily choices individuals make.*

**Question 333**

**Why is 'variety across food groups' emphasised over focusing on a single 'superfood'?**

**A.** Because no single food can provide all essential nutrients the body needs
**B.** Because superfoods provide complete nutrition on their own
**C.** Because variety has no real nutritional benefit
**D.** Because focusing on one food group is always sufficient

**Correct Answer:** Option (A) — Because no single food can provide all essential nutrients the body needs

**Explanation:** *No single food, however nutritious, can provide the full range of nutrients the body needs — variety across food groups ensures more complete nutrition.*

**Question 334**

**Why might 'reading a label before buying packaged snacks regularly' be listed as a best practice rather than a one-time action?**

**A.** Because product formulations and nutrition content can change over time or vary between products
**B.** Because labels never provide useful information after the first read
**C.** Because reading labels is only relevant for first-time purchases
**D.** Because nutrition content of a product never changes across purchases

**Correct Answer:** Option (A) — Because product formulations and nutrition content can change over time or vary between products

**Explanation:** *Since product formulations can change and vary between items, checking labels regularly rather than only once helps ensure informed choices continue over time.*

**Question 335**

**Why does a balanced diet still include some healthy fats rather than eliminating fat entirely?**

**A.** Because fat serves no useful biological purpose
**B.** Because fats support hormone function and help the body absorb certain vitamins
**C.** Because all fats are equally unhealthy regardless of source
**D.** Because fat should always be avoided completely for good health

**Correct Answer:** Option (B) — Because fats support hormone function and help the body absorb certain vitamins

**Explanation:** *Healthy fats support hormone function and help the body absorb fat-soluble vitamins, making them a necessary part of a balanced diet.*

**Question 336**

**Which of these best reflects a healthy eating habit?**

**A.** Eating meals at highly inconsistent, random times
**B.** Eating a variety of colours and food groups across the week
**C.** Relying on a single food group for all meals
**D.** Skipping meals regularly to save time

**Correct Answer:** Option (B) — Eating a variety of colours and food groups across the week

**Explanation:** *Including a variety of colours and food groups across the week supports more complete, balanced nutrition.*

**Question 337**

**Why might starting an exercise routine with intense workouts immediately be considered a common mistake?**

**A.** Because intense workouts are always safe for beginners
**B.** Because starting too intensely can lead to burnout or injury, causing people to quit altogether
**C.** Because gradual starts have no real benefit
**D.** Because intensity has no bearing on injury risk

**Correct Answer:** Option (B) — Because starting too intensely can lead to burnout or injury, causing people to quit altogether

**Explanation:** *Starting too intensely can lead to injury or burnout, which often causes people to abandon exercise altogether rather than sustaining it.*

**Question 338**

**A citizen wants to verify a food product's claims before purchasing regularly. Which combination of actions reflects best practice?**

**A.** Trust the front packaging claim alone without further checking
**B.** Check the ingredients list, nutrition panel, and consider FSSAI-related guidance on claims
**C.** Ignore all labelling information entirely
**D.** Rely solely on advertisements for product information

**Correct Answer:** Option (B) — Check the ingredients list, nutrition panel, and consider FSSAI-related guidance on claims

**Explanation:** *Checking the ingredients list, nutrition panel, and relevant regulatory guidance together provides a more reliable basis for evaluating a product's claims.*

**Question 339**

**A person wants to reduce sodium intake but doesn't cook at home often. What is a practical strategy based on nutrition awareness content?**

**A.** Ignore sodium content since eating out prevents any control
**B.** Check available nutrition information and choose lower-sodium options where possible
**C.** Assume all restaurant food has identical sodium content
**D.** Stop eating any food outside the home entirely

**Correct Answer:** Option (B) — Check available nutrition information and choose lower-sodium options where possible

**Explanation:** *Checking available nutrition information, where possible, and choosing lower-sodium options is a practical strategy even without cooking at home.*

**Question 340**

**Is occasional consumption of junk food generally considered harmful?**

**A.** Yes, even a single instance causes serious harm
**B.** No, the main concern is frequent, excessive intake replacing balanced meals
**C.** Yes, all packaged food is equally harmful
**D.** No, junk food has no health impact at all

**Correct Answer:** Option (B) — No, the main concern is frequent, excessive intake replacing balanced meals

**Explanation:** *Occasional consumption is generally not harmful; the real concern is frequent, excessive intake replacing balanced, nutritious meals.*

**Question 341**

**Why does nutrition guidance recommend gradual, sustainable weight management over crash diets?**

**A.** Because crash diets are always safe and effective long-term
**B.** Because gradual, sustainable approaches are more likely to be maintained and less likely to cause rebound effects
**C.** Because crash diets have no real risks associated with them
**D.** Because gradual approaches never produce measurable results

**Correct Answer:** Option (B) — Because gradual, sustainable approaches are more likely to be maintained and less likely to cause rebound effects

**Explanation:** *Gradual, sustainable weight management approaches are more likely to be maintained long-term and less prone to causing rebound weight regain.*

**Question 342**

**What should you check first when reading a packaged food label?**

**A.** The brand's logo colour
**B.** The serving size
**C.** The expiry date only
**D.** The price

**Correct Answer:** Option (B) — The serving size

**Explanation:** *Checking the serving size first is important, since nutrition values are often listed per serving, not per whole package.*

**Question 343**

**Why does nutrition guidance recommend treating 'BMI, weight, and how you feel' as complementary indicators rather than competing ones?**

**A.** Because only one of these three indicators is ever relevant
**B.** Because together they provide a more complete picture of health than relying on any single measure alone
**C.** Because these three factors always agree with each other
**D.** Because using multiple indicators is scientifically discouraged

**Correct Answer:** Option (B) — Because together they provide a more complete picture of health than relying on any single measure alone

**Explanation:** *Considering BMI, weight, and overall well-being together provides a more complete, balanced picture than relying on any single measure.*

**Question 344**

**What percentage of India's disease burden is linked to unhealthy diets, according to ICMR-NIN's 2024 guidelines?**

**A.** About 10%
**B.** About 56.4%
**C.** About 5%
**D.** Nearly 100%

**Correct Answer:** Option (B) — About 56.4%

**Explanation:** *ICMR-NIN's 2024 guidelines estimate that around 56.4% of India's total disease burden is linked to unhealthy diets.*

**Question 345**

**Why does the body need fibre as part of a balanced diet?**

**A.** It has no real digestive function
**B.** It supports healthy digestion and helps maintain steady blood sugar levels
**C.** It only affects taste, not health
**D.** It should be avoided in most diets

**Correct Answer:** Option (B) — It supports healthy digestion and helps maintain steady blood sugar levels

**Explanation:** *Fibre supports healthy digestion and helps maintain more steady blood sugar levels, making it an important part of a balanced diet.*

**Question 346**

**Why might front-of-pack nutrition labelling be considered especially helpful for consumers with lower literacy levels?**

**A.** Because simplified visual labels can convey key nutrition information more quickly than dense text-based panels
**B.** Because literacy level has no bearing on how labelling should be designed
**C.** Because front-of-pack labels are purely decorative with no informational value
**D.** Because only highly literate consumers benefit from any food labelling

**Correct Answer:** Option (A) — Because simplified visual labels can convey key nutrition information more quickly than dense text-based panels

**Explanation:** *Simplified, visual front-of-pack labels can convey key nutrition information more quickly and accessibly than dense text-based nutrition panels.*

**Question 347**

**What recent step did the Supreme Court direct FSSAI to take regarding food labels?**

**A.** Remove all labelling requirements
**B.** Implement simple, front-of-pack nutrition labels
**C.** Ban all packaged food
**D.** Allow unregulated health claims

**Correct Answer:** Option (B) — Implement simple, front-of-pack nutrition labels

**Explanation:** *In 2026, the Supreme Court directed FSSAI to implement simplified front-of-pack nutrition labelling for easier consumer understanding.*

**Question 348**

**What best describes an 'ultra-processed food'?**

**A.** Fresh, unprocessed vegetables
**B.** Industrially manufactured food, often high in sugar, salt, or fat
**C.** Home-cooked meals only
**D.** Whole grains with no additives

**Correct Answer:** Option (B) — Industrially manufactured food, often high in sugar, salt, or fat

**Explanation:** *Ultra-processed foods are industrially manufactured, often containing high levels of sugar, salt, or unhealthy fats.*

**Question 349**

**Why is 'cooking at home more often' associated with better control over nutrition, according to healthy living guidance?**

**A.** Because home cooking guarantees perfect nutrition regardless of ingredients used
**B.** Because cooking at home allows more direct control over ingredients, portions, and added salt, sugar, or fat
**C.** Because restaurant food is always nutritionally superior
**D.** Because home cooking has no bearing on ingredient choices

**Correct Answer:** Option (B) — Because cooking at home allows more direct control over ingredients, portions, and added salt, sugar, or fat

**Explanation:** *Cooking at home gives a person more direct control over ingredients, portion sizes, and how much salt, sugar, or fat is added.*

**Question 350**

**What is the main function of protein in the body?**

**A.** Provides quick energy only
**B.** Builds and repairs muscles and tissue
**C.** Regulates body temperature only
**D.** Has no real biological function

**Correct Answer:** Option (B) — Builds and repairs muscles and tissue

**Explanation:** *Protein is essential for building and repairing muscles and body tissue.*

**Question 351**

**Why does JSSK specifically cover transport costs in addition to medical procedures?**

**A.** Because transport has no bearing on a mother's ability to access institutional delivery
**B.** Because removing transport as a financial barrier helps ensure mothers can actually reach a facility for safe delivery
**C.** Because transport costs are unrelated to maternal health outcomes
**D.** Because JSSK only covers costs after delivery, not before

**Correct Answer:** Option (B) — Because removing transport as a financial barrier helps ensure mothers can actually reach a facility for safe delivery

**Explanation:** *Covering transport costs removes a practical financial barrier that might otherwise prevent a mother from reaching a facility for safe delivery.*

**Question 352**

**Why does general guidance suggest involving the 'whole family' in health planning rather than relying on one person?**

**A.** Because relying on a single person is always the most effective approach

**B.** Because preparedness and awareness are more resilient when shared across the family rather than depending on one individual

**C.** Because family involvement has no bearing on health outcomes

**D.** Because only one family member should ever be responsible for health matters

**Correct Answer:** Option (B) — Because preparedness and awareness are more resilient when shared across the family rather than depending on one individual

**Explanation:** *Sharing health awareness and responsibility across the family makes preparedness more resilient than depending on just one individual.*

**Question 353**

**Why might 'Ayushman Arogya Mandirs' be particularly relevant to women's health awareness and elderly care simultaneously?**

**A.** Because they only serve one specific age group

**B.** Because they offer free primary care and screening accessible to family members across different life stages, including women and the elderly

**C.** Because they are exclusively for maternity care

**D.** Because they have no connection to preventive screening

**Correct Answer:** Option (B) — Because they offer free primary care and screening accessible to family members across different life stages, including women and the elderly

**Explanation:** *As primary care centres, Ayushman Arogya Mandirs offer free screening and care accessible to family members across different life stages, including both women's health and elderly care needs.*

**Question 354**

**What is CHILDLINE's helpline number in India?**

**A.** 1098

**B.** 108

**C.** 14416

**D.** 112

**Correct Answer:** Option (A) — 1098

**Explanation:** *CHILDLINE, India's free 24x7 helpline for children in distress, can be reached at 1098.*

**Question 355**

**Why does the Maintenance and Welfare of Parents and Senior Citizens Act, 2007 include provisions for old age homes?**

**A.** Because all elderly citizens are legally required to live in old age homes

**B.** Because the Act aims to ensure support options exist for elderly citizens who may lack adequate family care

**C.** Because old age homes have no legal basis in India

**D.** Because this provision is unrelated to elderly welfare

**Correct Answer:** Option (B) — Because the Act aims to ensure support options exist for elderly citizens who may lack adequate family care

**Explanation:** *The Act ensures support options like old age homes exist for elderly citizens, particularly where adequate family-based care may not be available.*

**Question 356**

**Which nutrient need increases significantly during adolescence, especially for menstruating girls?**

**A.** Iron
**B.** Trans fat
**C.** Artificial sweeteners
**D.** Caffeine

**Correct Answer:** Option (A) — Iron

**Explanation:** *Iron needs increase significantly during adolescence, particularly for girls due to menstruation and growth spurts.*

**Question 357**

**What is a basic home safety measure to prevent child injury?**

**A.** Leaving medicines within easy reach
**B.** Keeping medicines and cleaning products out of children's reach
**C.** Allowing unsupervised access to stairs
**D.** Leaving furniture corners unprotected

**Correct Answer:** Option (B) — Keeping medicines and cleaning products out of children's reach

**Explanation:** *Keeping medicines and hazardous products out of children's reach is a fundamental home safety measure.*

**Question 358**

**What is the Rashtriya Kishor Swasthya Karyakram (RKSK) focused on?**

**A.** Senior citizen pensions
**B.** Holistic adolescent health and development
**C.** Only adult vaccination
**D.** Corporate employee wellness

**Correct Answer:** Option (B) — Holistic adolescent health and development

**Explanation:** *RKSK is India's national programme supporting holistic adolescent health, covering nutrition, safety, and mental health.*

**Question 359**

**Which life stage's primary health focus, according to general life-stage health guidance, centres on antenatal care and safe delivery?**

**A.** Adolescence
**B.** Pregnancy
**C.** Old age
**D.** Adulthood

**Correct Answer:** Option (B) — Pregnancy

**Explanation:** *Pregnancy is the life stage where antenatal care, safe delivery, and postnatal recovery are the primary health focus.*

**Question 360**

**What is a key feature of Adolescent Friendly Health Clinics under RKSK?**

**A.** They are only open to adults
**B.** They offer a comfortable, confidential space for adolescent health questions
**C.** They exclusively handle emergency surgeries
**D.** They are only available online

**Correct Answer:** Option (B) — They offer a comfortable, confidential space for adolescent health questions

**Explanation:** *Adolescent Friendly Health Clinics offer a comfortable, confidential environment designed specifically for adolescent health needs.*

**Question 361**

**Why might a family with a newborn and an elderly grandparent living together need to adapt multiple parts of their health routine at once?**

**A.** Because only one member's needs ever matter at a time
**B.** Because each life stage present in the household has distinct needs that benefit from simultaneous, tailored attention
**C.** Because newborns and elderly individuals have identical health requirements
**D.** Because adapting routines for multiple life stages is unnecessary

**Correct Answer:** Option (B) — Because each life stage present in the household has distinct needs that benefit from simultaneous, tailored attention

**Explanation:** *When multiple life stages are present in one household, each brings distinct needs that benefit from simultaneous, tailored attention rather than a single generic approach.*

**Question 362**

**What is a key nutritional priority for senior citizens?**

**A.** Avoiding protein entirely
**B.** Adequate protein, calcium, and Vitamin D
**C.** Only consuming sugary foods
**D.** Eliminating all dairy products

**Correct Answer:** Option (B) — Adequate protein, calcium, and Vitamin D

**Explanation:** *Senior citizens benefit from adequate protein, calcium, and Vitamin D to support muscle and bone health.*

**Question 363**

**What is a practical benefit of maintaining a shared 'family health folder' containing vaccination records and insurance details?**

**A.** It has no practical use during a medical emergency
**B.** It allows quick, confident access to important information during unexpected situations like a sudden hospital visit
**C.** It replaces the need for any actual medical care
**D.** It is only useful for tax purposes

**Correct Answer:** Option (B) — It allows quick, confident access to important information during unexpected situations like a sudden hospital visit

**Explanation:** *A shared family health folder allows quick, confident access to important records, which is especially valuable during unexpected situations like a sudden hospital visit.*

**Question 364**

**Why might a family's 'one-size' meal plan fail to serve every member well?**

**A.** Because all family members have identical nutritional needs
**B.** Because nutritional needs vary meaningfully by life stage, such as pregnancy, childhood, or old age
**C.** Because meal planning has no connection to health outcomes
**D.** Because variety in meals is unnecessary for good health

**Correct Answer:** Option (B) — Because nutritional needs vary meaningfully by life stage, such as pregnancy, childhood, or old age

**Explanation:** *Nutritional needs vary meaningfully across life stages, meaning a single meal plan rarely serves every family member optimally.*

**Question 365**

**Why does child safety guidance recommend teaching children about 'safe and unsafe touch' in general, protective terms?**

**A.** Because this topic has no relevance to child safety
**B.** Because general, age-appropriate awareness helps children recognise and report concerning situations to a trusted adult
**C.** Because children should be given explicit details about specific incidents
**D.** Because this guidance is only relevant to law enforcement, not parents

**Correct Answer:** Option (B) — Because general, age-appropriate awareness helps children recognise and report concerning situations to a trusted adult

**Explanation:** *General, age-appropriate awareness helps children recognise concerning situations and know to tell a trusted adult, supporting their safety without requiring explicit detail.*

**Question 366**

**Why does family health guidance recommend keeping vaccination and health records organised and accessible to the whole family, not just one member?**

**A.** Because only one family member should ever need this information
**B.** Because shared access ensures continuity of care even if the primary record-keeper is unavailable
**C.** Because organising records has no practical benefit
**D.** Because records only matter for legal purposes, not health

**Correct Answer:** Option (B) — Because shared access ensures continuity of care even if the primary record-keeper is unavailable

**Explanation:** *Shared access to health records ensures continuity of care and informed decision-making, even if the usual record-keeper isn't available.*

**Question 367**

**Why is exclusive breastfeeding recommended for the first 6 months of an infant's life?**

**A.** Because it provides complete, appropriate nutrition for early infant growth and development
**B.** Because it has no nutritional relevance at all
**C.** Because formula is always superior for the first 6 months
**D.** Because this recommendation applies only in rural areas

**Correct Answer:** Option (A) — Because it provides complete, appropriate nutrition for early infant growth and development

**Explanation:** *Exclusive breastfeeding provides complete, appropriate nutrition tailored to an infant's needs during the critical first 6 months of growth.*

**Question 368**

**Why does bone health guidance emphasise childhood and adolescence rather than focusing only on elderly care?**

**A.** Because bone density is fixed at birth and cannot be influenced later
**B.** Because peak bone mass built during youth significantly affects fracture risk and bone health in later life
**C.** Because bone health is entirely irrelevant until old age
**D.** Because childhood nutrition has no connection to adult bone strength

**Correct Answer:** Option (B) — Because peak bone mass built during youth significantly affects fracture risk and bone health in later life

**Explanation:** *Since peak bone mass is built in youth, early nutrition and activity significantly influence bone strength and fracture risk decades later.*

**Question 369**

**A teenager seems reluctant to discuss physical changes with parents. What does RKSK-aligned guidance suggest?**

**A.** Force the conversation regardless of their comfort
**B.** Keep the conversation open and non-judgemental, and mention adolescent-friendly clinics if needed
**C.** Avoid the topic permanently
**D.** Assume no support is needed since they haven't asked

**Correct Answer:** Option (B) — Keep the conversation open and non-judgemental, and mention adolescent-friendly clinics if needed

**Explanation:** *Maintaining an open, non-judgemental approach, while mentioning available resources like adolescent-friendly clinics, respects the teenager's comfort while keeping support accessible.*

**Question 370**

**Why might 'women's health awareness' specifically emphasise regular screening, even without symptoms?**

**A.** Because screening has no diagnostic value without symptoms
**B.** Because several women's health concerns can be detected earlier through regular screening, improving outcomes
**C.** Because symptoms always appear early enough for effective treatment
**D.** Because screening is only relevant for older women

**Correct Answer:** Option (B) — Because several women's health concerns can be detected earlier through regular screening, improving outcomes

**Explanation:** *Regular screening can detect certain health concerns earlier, even before symptoms appear, improving the chances of effective treatment.*

**Question 371**

**Why is menstruation described as a 'normal, healthy biological process' in awareness materials, rather than something to hide?**

**A.** Because reframing it this way helps reduce stigma and supports girls' confidence and school attendance
**B.** Because menstruation has no biological basis
**C.** Because hiding it has historically improved health outcomes
**D.** Because this framing has no practical impact on behaviour

**Correct Answer:** Option (A) — Because reframing it this way helps reduce stigma and supports girls' confidence and school attendance

**Explanation:** *Framing menstruation as normal and healthy helps reduce stigma, which in turn supports girls' confidence, comfort, and school attendance.*

**Question 372**

**What is recommended for infants aged 0–6 months, according to ICMR-NIN and WHO guidance?**

**A.** Solid food only
**B.** Exclusive breastfeeding
**C.** Cow's milk only
**D.** Fruit juice as the primary food

**Correct Answer:** Option (B) — Exclusive breastfeeding

**Explanation:** *Exclusive breastfeeding for the first 6 months is recommended by both ICMR-NIN and WHO for infant health.*

**Question 373**

**What percentage-based statistic reflects a real concern around menstrual hygiene and education in India?**

**A.** Almost no girls are affected
**B.** Around 1 in 5 girls report missing school due to menstruation-related issues
**C.** All girls attend school without any menstruation-related impact
**D.** This issue is unrelated to school attendance

**Correct Answer:** Option (B) — Around 1 in 5 girls report missing school due to menstruation-related issues

**Explanation:** *Studies suggest around 1 in 5 Indian girls have missed school due to menstruation-related challenges, highlighting a real access gap.*

**Question 374**

**Why might 'geriatric care' differ meaningfully from general adult healthcare?**

**A.** Because ageing introduces specific health considerations, such as increased fall risk and chronic disease management, that require focused attention
**B.** Because elderly individuals have identical healthcare needs to younger adults
**C.** Because geriatric care is simply a rebranding with no real difference
**D.** Because ageing has no distinct health implications

**Correct Answer:** Option (A) — Because ageing introduces specific health considerations, such as increased fall risk and chronic disease management, that require focused attention

**Explanation:** *Ageing introduces specific considerations, such as increased fall risk and chronic disease management, that justify a more focused geriatric care approach.*

**Question 375**

**What does the term 'geriatric care' specifically refer to?**

**A.** Care focused exclusively on infants
**B.** Medical care specifically focused on the health needs of older adults
**C.** General care with no age-specific focus
**D.** Care that only applies in emergency situations

**Correct Answer:** Option (B) — Medical care specifically focused on the health needs of older adults

**Explanation:** *Geriatric care refers to medical care specifically focused on addressing the health needs of older adults.*

**Question 376**

**Why might a family reconsider a grandparent's home safety after a minor fall, even if no serious injury occurred?**

**A.** Because a minor fall guarantees no further risk exists
**B.** Because even a minor fall can indicate a hazard or vulnerability that could lead to a more serious incident later
**C.** Because home safety is unrelated to fall history
**D.** Because falls in elderly individuals are never a cause for attention

**Correct Answer:** Option (B) — Because even a minor fall can indicate a hazard or vulnerability that could lead to a more serious incident later

**Explanation:** *A minor fall can reveal a hazard or vulnerability that, if unaddressed, could lead to a more serious injury in the future.*

**Question 377**

**Why might 'active and healthy ageing' be a more accurate framing than assuming decline is inevitable with age?**

**A.** Because ageing always leads to complete physical decline with no exceptions
**B.** Because many aspects of health can be maintained or improved through activity, social engagement, and preventive care, even in older age
**C.** Because active ageing has no supporting evidence
**D.** Because decline is entirely unavoidable regardless of any intervention

**Correct Answer:** Option (B) — Because many aspects of health can be maintained or improved through activity, social engagement, and preventive care, even in older age

**Explanation:** *Many aspects of health can be maintained or improved in older age through continued activity, social engagement, and preventive care, challenging the assumption that decline is inevitable.*

**Question 378**

**Who are ASHA workers, as referenced in maternal and child health programmes?**

**A.** Government tax officials
**B.** Accredited Social Health Activists, trained community health workers
**C.** Private hospital administrators
**D.** Foreign healthcare consultants

**Correct Answer:** Option (B) — Accredited Social Health Activists, trained community health workers

**Explanation:** *ASHA stands for Accredited Social Health Activist, a trained community health worker who supports local health initiatives.*

**Question 379**

**What does JSY encourage among pregnant women?**

**A.** Home delivery only
**B.** Institutional delivery through cash assistance
**C.** Avoiding all medical checkups
**D.** Delaying childbirth

**Correct Answer:** Option (B) — Institutional delivery through cash assistance

**Explanation:** *Janani Suraksha Yojana (JSY) provides cash assistance to encourage institutional delivery, improving safety for mother and child.*

**Question 380**

**What is a common mistake regarding elderly family members' reduced mobility?**

**A.** Seeking a medical review promptly
**B.** Assuming it is simply 'normal ageing' without medical review
**C.** Improving home safety measures
**D.** Encouraging gentle physical activity

**Correct Answer:** Option (B) — Assuming it is simply 'normal ageing' without medical review

**Explanation:** *Assuming reduced mobility is simply normal ageing, without medical review, can miss treatable underlying causes.*

**Question 381**

**What does the Jan Aushadhi Suvidha scheme provide?**

**A.** Free eyeglasses
**B.** Biodegradable sanitary pads at ₹1 each
**C.** Free bicycles for girls
**D.** Free textbooks

**Correct Answer:** Option (B) — Biodegradable sanitary pads at ₹1 each

**Explanation:** *The Jan Aushadhi Suvidha scheme provides biodegradable sanitary pads at just ₹1 each through Jan Aushadhi Kendras.*

**Question 382**

**A young girl is anxious about starting her period. What is the most supportive family response?**

**A.** Avoid discussing it to prevent embarrassment
**B.** Talk openly, normalise the topic, and ensure she knows where to access affordable products
**C.** Tell her not to worry without further explanation
**D.** Delay any conversation until she asks directly

**Correct Answer:** Option (B) — Talk openly, normalise the topic, and ensure she knows where to access affordable products

**Explanation:** *Open, normalising conversation paired with practical information about accessing affordable menstrual products is the most supportive response.*

**Question 383**

**How has India's Maternal Mortality Ratio changed between 2014–16 and 2021–23?**

**A.** It increased sharply
**B.** It fell from 130 to 80 per lakh live births
**C.** It stayed exactly the same
**D.** It became impossible to measure

**Correct Answer:** Option (B) — It fell from 130 to 80 per lakh live births

**Explanation:** *India's Maternal Mortality Ratio fell from 130 to 80 deaths per lakh live births over this period, reflecting real progress.*

**Question 384**

**Why is open family communication about puberty and menstruation encouraged?**

**A.** Because silence is always the best approach
**B.** Because open, factual conversation reduces shame and supports healthy understanding
**C.** Because these topics are inappropriate for family discussion
**D.** Because puberty has no connection to family well-being

**Correct Answer:** Option (B) — Because open, factual conversation reduces shame and supports healthy understanding

**Explanation:** *Open, factual conversation helps reduce shame and supports a healthier understanding of these normal biological processes.*

**Question 385**

**A pregnant woman in a rural area is unsure if she can afford antenatal care. What should she know?**

**A.** Antenatal care is always expensive with no free options
**B.** Free antenatal checkups are available through PMSMA at government facilities
**C.** She should avoid antenatal care until finances improve
**D.** Antenatal care is only available in private hospitals

**Correct Answer:** Option (B) — Free antenatal checkups are available through PMSMA at government facilities

**Explanation:** *PMSMA provides completely free antenatal checkups at government facilities, removing cost as a barrier to essential maternal care.*

**Question 386**

**Why does elderly care guidance recommend monitoring chronic conditions like hypertension and diabetes consistently, rather than only during acute episodes?**

**A.** Because consistent monitoring helps catch complications early and supports better long-term management
**B.** Because chronic conditions never need ongoing monitoring
**C.** Because acute episodes are the only time monitoring matters
**D.** Because consistent monitoring has no bearing on long-term outcomes

**Correct Answer:** Option (A) — Because consistent monitoring helps catch complications early and supports better long-term management

**Explanation:** *Consistent monitoring helps catch potential complications early, supporting better long-term management of chronic conditions like hypertension and diabetes.*

**Question 387**

**What does PMSMA provide to pregnant women?**

**A.** Free college admission
**B.** Free, specialist-led antenatal checkups on the 9th of every month
**C.** Free driving lessons
**D.** Free household appliances

**Correct Answer:** Option (B) — Free, specialist-led antenatal checkups on the 9th of every month

**Explanation:** *Pradhan Mantri Surakshit Matritva Abhiyan (PMSMA) provides free, specialist-led antenatal checkups on the 9th of every month.*

**Question 388**

**Why does RKSK address gender-based violence and safety alongside physical health for adolescents?**

**A.** Because these issues are entirely unrelated to adolescent development
**B.** Because RKSK takes a holistic view of adolescent well-being, recognising that safety and mental health are as important as physical health
**C.** Because safety concerns don't affect adolescents specifically
**D.** Because RKSK only addresses nutrition, nothing else

**Correct Answer:** Option (B) — Because RKSK takes a holistic view of adolescent well-being, recognising that safety and mental health are as important as physical health

**Explanation:** *RKSK's holistic model recognises that safety and mental well-being are just as important to adolescent development as physical health.*

**Question 389**

**Why does awareness content recommend discussing organ or blood donation wishes with family in advance, in a chapter also covering family health practices?**

**A.** Because family awareness has no bearing on how such wishes are ultimately honoured
**B.** Because family consent or awareness is often practically necessary, making advance discussion valuable
**C.** Because donation wishes are always automatically honoured regardless of family involvement
**D.** Because this topic is unrelated to family health planning

**Correct Answer:** Option (B) — Because family consent or awareness is often practically necessary, making advance discussion valuable

**Explanation:** *Since family awareness or consent is often practically necessary for donation decisions, discussing these wishes in advance is a valuable part of family health planning.*

**Question 390**

**During which life stage is peak bone mass typically built?**

**A.** Old age
**B.** Childhood and adolescence
**C.** Only during pregnancy
**D.** It cannot be influenced by age

**Correct Answer:** Option (B) — Childhood and adolescence

**Explanation:** *Peak bone mass is primarily built during childhood and adolescence, making these years crucial for long-term bone health.*

**Question 391**

**Why might 'child safety' as a topic include both physical hazards (like electrical outlets) and personal safety awareness (like safe touch)?**

**A.** Because these are the same single concern with no distinction
**B.** Because comprehensive child safety addresses multiple types of risk that children may face, not just one category
**C.** Because personal safety awareness is irrelevant to child safety overall
**D.** Because physical hazards are the only genuine safety concern for children

**Correct Answer:** Option (B) — Because comprehensive child safety addresses multiple types of risk that children may face, not just one category

**Explanation:** *Comprehensive child safety addresses multiple types of risk — physical hazards, accidents, and personal safety — rather than focusing on just one category.*

**Question 392**

**What does the POCSO Act, 2012 primarily provide?**

**A.** Tax benefits for families
**B.** A legal framework protecting children, including mandatory reporting requirements
**C.** Free school meals
**D.** Child labour permits

**Correct Answer:** Option (B) — A legal framework protecting children, including mandatory reporting requirements

**Explanation:** *The POCSO Act, 2012 provides a legal framework to protect children, including mandatory reporting obligations for offences against them.*

**Question 393**

**Why does this module frame 'family health' as something requiring active planning, rather than something that happens automatically?**

**A.** Because health needs shift across life stages, and proactive planning better addresses each member's needs than passive assumption
**B.** Because family health always takes care of itself without any effort
**C.** Because active planning has no measurable benefit over passive assumption
**D.** Because health needs remain identical across every life stage

**Correct Answer:** Option (A) — Because health needs shift across life stages, and proactive planning better addresses each member's needs than passive assumption

**Explanation:** *Because health needs shift meaningfully across life stages, proactive planning is more effective at addressing each member's needs than simply assuming things will work out.*

**Question 394**

**What are RKSK's trained peer educators called?**

**A.** Ashas
**B.** Saathiya
**C.** Sevaks
**D.** Mitras

**Correct Answer:** Option (B) — Saathiya

**Explanation:** *Peer educators under RKSK are known as 'Saathiya,' supporting adolescents with health information and guidance.*

**Question 395**

**What is a key precaution for reducing fall risk among elderly family members at home?**

**A.** Removing all lighting
**B.** Installing grab rails and improving lighting
**C.** Adding more loose rugs
**D.** Avoiding any home modifications

**Correct Answer:** Option (B) — Installing grab rails and improving lighting

**Explanation:** *Installing grab rails and improving lighting are simple, effective ways to reduce fall risk for elderly family members.*

**Question 396**

**How does the NHM Menstrual Hygiene Scheme typically reach adolescent girls?**

**A.** Through paid online orders only
**B.** Through subsidised pad packs distributed by ASHA workers
**C.** Through private pharmacy chains exclusively
**D.** Through school entrance examinations

**Correct Answer:** Option (B) — Through subsidised pad packs distributed by ASHA workers

**Explanation:** *The NHM Menstrual Hygiene Scheme distributes subsidised sanitary pad packs to adolescent girls through ASHA workers.*

**Question 397**

**What does NPHCE stand for?**

**A.** National Programme for Health Care of the Elderly
**B.** National Police Health Care Establishment
**C.** National Plan for Home Care Equipment
**D.** National Pension for Health Care Employees

**Correct Answer:** Option (A) — National Programme for Health Care of the Elderly

**Explanation:** *NPHCE stands for the National Programme for Health Care of the Elderly, offering dedicated geriatric health services.*

**Question 398**

**A family notices their toddler has started walking. What is the most relevant next step?**

**A.** No changes are needed to the home
**B.** Childproof furniture corners, electrical outlets, and unstable shelving
**C.** Remove all furniture from the home
**D.** Restrict the child to one room permanently

**Correct Answer:** Option (B) — Childproof furniture corners, electrical outlets, and unstable shelving

**Explanation:** *Once a toddler starts walking, childproofing hazards like sharp corners, outlets, and unstable furniture becomes especially important.*

**Question 399**

**Why might anaemia be specifically targeted among women and girls through Anemia Mukt Bharat?**

**A.** Because anaemia has no significant health impact
**B.** Because anaemia is highly prevalent among Indian women and girls, making targeted intervention especially impactful
**C.** Because anaemia only affects men in India
**D.** Because this programme addresses an issue with no measurable prevalence

**Correct Answer:** Option (B) — Because anaemia is highly prevalent among Indian women and girls, making targeted intervention especially impactful

**Explanation:** *Anaemia is highly prevalent among Indian women and girls, making them a particularly impactful group for targeted nutritional intervention.*

**Question 400**

**Why might a family's awareness of PMMVY be relevant during pregnancy?**

**A.** Because it provides maternity benefit cash transfers for eligible mothers
**B.** Because it only applies to fathers, not mothers
**C.** Because it replaces the need for any antenatal care
**D.** Because it is unrelated to financial support during pregnancy

**Correct Answer:** Option (A) — Because it provides maternity benefit cash transfers for eligible mothers

**Explanation:** *PMMVY provides maternity benefit cash transfers to eligible mothers, offering some financial support during pregnancy and after childbirth.*

**Question 401**

**Why does organ donation law require recognition of 'brain death' as a legal form of death?**

**A.** Because brain death recognition has no bearing on organ donation feasibility
**B.** Because it enables ethical, legally sound deceased organ donation while a person's other organs may still be functioning with support
**C.** Because brain death is identical to cardiac death in all respects
**D.** Because this recognition primarily serves unrelated legal purposes

**Correct Answer:** Option (B) — Because it enables ethical, legally sound deceased organ donation while a person's other organs may still be functioning with support

**Explanation:** *Recognising brain death allows for ethical, legally sound organ donation in situations where other organs may still be functioning with medical support.*

**Question 402**

**What best describes 'tertiary care'?**

**A.** Basic first-contact healthcare
**B.** Highly specialised medical care, usually at large hospitals or medical colleges
**C.** Care available only in rural areas
**D.** Care that never requires a hospital visit

**Correct Answer:** Option (B) — Highly specialised medical care, usually at large hospitals or medical colleges

**Explanation:** *Tertiary care refers to highly specialised medical treatment, typically provided at large hospitals or medical colleges.*

**Question 403**

**Why might 'checking eligibility before an emergency' be better advice than waiting until a health crisis occurs?**

**A.** Because eligibility status can change unpredictably with no warning
**B.** Because knowing your coverage and entitlements in advance allows faster, more confident action when a real emergency arises
**C.** Because checking eligibility in advance is legally required
**D.** Because eligibility only matters after treatment has already occurred

**Correct Answer:** Option (B) — Because knowing your coverage and entitlements in advance allows faster, more confident action when a real emergency arises

**Explanation:** *Knowing your coverage and entitlements in advance allows for faster, more confident action if a genuine health emergency arises.*

**Question 404**

**What number should you call for an ambulance in most Indian states?**

**A.** 101
**B.** 108
**C.** 1098
**D.** 14416

**Correct Answer:** Option (B) — 108

**Explanation:** *108 is the widely used ambulance emergency response number across most Indian states.*

**Question 405**

**Why might a family discuss ABHA IDs as part of accessing healthcare services efficiently?**

**A.** Because ABHA IDs have no practical use in healthcare access
**B.** Because a digital health ID can help securely store and share health records across different providers
**C.** Because ABHA IDs are only relevant for insurance claims, not general care
**D.** Because ABHA IDs replace the need for any hospital visit

**Correct Answer:** Option (B) — Because a digital health ID can help securely store and share health records across different providers

**Explanation:** *An ABHA ID helps securely store and share health records across different healthcare providers, supporting more efficient, coordinated care.*

**Question 406**

**What is a 'waiting period' in health insurance?**

**A.** The time spent in a hospital waiting room
**B.** A period before certain conditions become eligible for a claim
**C.** The time it takes to receive a policy document
**D.** A mandatory delay before buying any insurance

**Correct Answer:** Option (B) — A period before certain conditions become eligible for a claim

**Explanation:** *A waiting period is the time before certain conditions become eligible for an insurance claim under a policy.*

**Question 407**

**A person is asked to be a witness multiple times regarding an accident they helped with. What protection might apply under related legal principles?**

**A.** No protection exists in Indian law for this situation
**B.** Good Samaritan protections generally aim to minimise repeated procedural burdens like excessive witness demands on helpers
**C.** This is a completely unrelated legal issue
**D.** Helpers are legally required to attend unlimited hearings regardless of burden

**Correct Answer:** Option (B) — Good Samaritan protections generally aim to minimise repeated procedural burdens like excessive witness demands on helpers

**Explanation:** *Good Samaritan-related protections generally aim to minimise repeated procedural burdens, such as excessive witness demands, on those who help in good faith.*

**Question 408**

**Why might understanding 'co-payment' be important before purchasing a health insurance policy?**

**A.** Because co-payment refers to an amount the policyholder must pay out of pocket, directly affecting the actual cost of a claim
**B.** Because co-payment always equals the full treatment cost
**C.** Because co-payment is irrelevant to how much a person ultimately pays
**D.** Because insurers never require any co-payment under any policy

**Correct Answer:** Option (A) — Because co-payment refers to an amount the policyholder must pay out of pocket, directly affecting the actual cost of a claim

**Explanation:** *Co-payment represents a share of the bill the policyholder must pay themselves, directly affecting how much a claim actually costs them out of pocket.*

**Question 409**

**Why does the existence of NOTTO's regional and state-level networks (ROTTO/SOTTO) matter for organ donation coordination?**

**A.** Because a single national body could always coordinate every donation instantly without regional support
**B.** Because regional and state-level networks help manage the practical logistics of matching, transport, and timing across a large country
**C.** Because these networks have no functional role in the donation process
**D.** Because organ donation coordination requires no logistical support at all

**Correct Answer:** Option (B) — Because regional and state-level networks help manage the practical logistics of matching, transport, and timing across a large country

**Explanation:** *Regional and state-level networks help manage complex logistics like matching, transport, and timing, which are essential for effective organ donation coordination across a large country.*

**Question 410**

**What is used to determine Ayushman Bharat PM-JAY eligibility?**

**A.** Income certificates only
**B.** SECC 2011 deprivation and occupational criteria
**C.** College degree status
**D.** Age alone, with no other criteria

**Correct Answer:** Option (B) — SECC 2011 deprivation and occupational criteria

**Explanation:** *Eligibility is based on SECC 2011 deprivation and occupational criteria, not income certificates.*

**Question 411**

**A patient is unsure about a suggested surgery. What right allows them to explore further before proceeding?**

**A.** The right to a second opinion
**B.** The right to free transportation
**C.** The right to a hospital discount
**D.** The right to change their date of birth on records

**Correct Answer:** Option (A) — The right to a second opinion

**Explanation:** *The right to seek a second opinion is an explicitly recognised patient right, allowing further exploration before major decisions.*

**Question 412**

**Why is understanding 'sum insured' important when evaluating a health insurance policy?**

**A.** Because it has no bearing on how much the policy actually covers
**B.** Because it represents the maximum amount the insurer will pay in a policy year, directly affecting the level of financial protection
**C.** Because sum insured only applies to life insurance, not health insurance
**D.** Because this term is purely decorative with no practical meaning

**Correct Answer:** Option (B) — Because it represents the maximum amount the insurer will pay in a policy year, directly affecting the level of financial protection

**Explanation:** *The sum insured represents the maximum amount an insurer will pay within a policy year, directly determining the level of financial protection provided.*

**Question 413**

**Why might a citizen check a hospital's empanelment status before assuming treatment costs?**

**A.** Because empanelment status has no bearing on treatment cost or coverage
**B.** Because only empanelled hospitals can offer cashless treatment under schemes like PM-JAY
**C.** Because all hospitals are automatically empanelled regardless of registration
**D.** Because empanelment only matters for government hospitals, not private ones

**Correct Answer:** Option (B) — Because only empanelled hospitals can offer cashless treatment under schemes like PM-JAY

**Explanation:** *Cashless treatment under schemes like PM-JAY is only available at hospitals that are officially empanelled under the scheme.*

**Question 414**

**Why does India's blood donation system rely entirely on voluntary, non-remunerated donors?**

**A.** Because paid donation is scientifically proven to be safer
**B.** Because voluntary, unpaid donation is considered safer and more ethical, reducing risks associated with paid donation
**C.** Because voluntary donation guarantees an unlimited blood supply
**D.** Because remunerated donation is required by international law

**Correct Answer:** Option (B) — Because voluntary, unpaid donation is considered safer and more ethical, reducing risks associated with paid donation

**Explanation:** *Voluntary, non-remunerated donation is considered safer and more ethical, reducing risks historically associated with paid blood donation systems.*

**Question 415**

**What does IRDAI regulate?**

**A.** Food safety
**B.** Health insurance providers in India
**C.** Organ transplantation
**D.** Blood donation standards

**Correct Answer:** Option (B) — Health insurance providers in India

**Explanation:** *The Insurance Regulatory and Development Authority of India (IRDAI) regulates health insurance providers nationwide.*

**Question 416**

**Why does India maintain both public (government) and private hospital systems rather than relying on just one?**

**A.** Because private hospitals are illegal in India
**B.** Because a mixed system can offer broader capacity, choice, and specialisation across different types of care
**C.** Because public hospitals are being phased out entirely
**D.** Because private and public systems serve identical functions with no distinction

**Correct Answer:** Option (B) — Because a mixed system can offer broader capacity, choice, and specialisation across different types of care

**Explanation:** *A mixed system of public and private hospitals can offer broader overall capacity, patient choice, and specialisation across different types of care.*

**Question 417**

**Why does the Patients' Rights Charter include a right to 'transparency in billing'?**

**A.** Because billing transparency has no real value to patients
**B.** Because clear, itemised billing helps patients understand and verify charges, reducing the risk of unclear or excessive costs
**C.** Because hospitals are legally required to keep all costs hidden
**D.** Because this right only applies to insurance claims, not direct payments

**Correct Answer:** Option (B) — Because clear, itemised billing helps patients understand and verify charges, reducing the risk of unclear or excessive costs

**Explanation:** *Transparent, itemised billing helps patients understand and verify charges, protecting them from unclear or potentially excessive costs.*

**Question 418**

**Why might 'starting at the right level of care' (such as a primary health centre) often lead to more appropriate treatment than heading straight to a large hospital?**

**A.** Because primary care facilities are always better equipped than tertiary hospitals
**B.** Because starting at the appropriate level helps route patients efficiently, often resulting in faster, more suitable care for common concerns
**C.** Because large hospitals never provide appropriate care for any condition
**D.** Because care level has no bearing on treatment appropriateness or speed

**Correct Answer:** Option (B) — Because starting at the appropriate level helps route patients efficiently, often resulting in faster, more suitable care for common concerns

**Explanation:** *Starting at the appropriate care level helps route patients efficiently, often leading to faster and more suitable care for common health concerns.*

**Question 419**

**Why might a citizen's awareness of their 'right to information about diagnosis, treatment, and cost' change how they interact with healthcare providers?**

**A.** Because this awareness has no practical effect on patient behaviour

**B.** Because it can encourage patients to ask clarifying questions and seek fuller understanding rather than passively accepting unclear information

**C.** Because patients are legally forbidden from asking about cost

**D.** Because diagnosis and treatment information is never relevant to a patient's own care

**Correct Answer:** Option (B) — Because it can encourage patients to ask clarifying questions and seek fuller understanding rather than passively accepting unclear information

**Explanation:** *Awareness of this right can encourage patients to actively ask questions and seek clearer understanding, rather than passively accepting unclear information.*

**Question 420**

**A person wants to become a regular blood donor. Why might they need to wait between donations rather than donating continuously?**

**A.** Because waiting periods have no biological basis

**B.** Because the body needs time to replenish blood components, and spacing donations protects donor health

**C.** Because donation frequency is regulated only for administrative convenience

**D.** Because there is no actual waiting period requirement in India

**Correct Answer:** Option (B) — Because the body needs time to replenish blood components, and spacing donations protects donor health

**Explanation:** *Waiting periods allow the body sufficient time to replenish blood components, protecting the health and safety of the donor.*

**Question 421**

**A daily-wage worker needs emergency surgery but has no savings. Which scheme could most directly help avoid financial hardship?**

**A.** A private international insurance plan

**B.** Ayushman Bharat PM-JAY, if eligible

**C.** A personal bank loan only

**D.** No support exists for such cases

**Correct Answer:** Option (B) — Ayushman Bharat PM-JAY, if eligible

**Explanation:** *Ayushman Bharat PM-JAY can provide cashless treatment for eligible individuals, directly reducing financial hardship in such situations.*

**Question 422**

**Why is 'informed consent' considered essential before any medical procedure?**

**A.** Because it has no real legal or ethical significance

**B.** Because it ensures the patient understands and agrees to a procedure after learning its risks, benefits, and alternatives

**C.** Because it is only a formality with no bearing on patient care

**D.** Because consent is only required for surgical procedures, not general treatment

**Correct Answer:** Option (B) — Because it ensures the patient understands and agrees to a procedure after learning its risks, benefits, and alternatives

**Explanation:** *Informed consent ensures a patient genuinely understands and agrees to a procedure after learning its risks, benefits, and alternatives.*

**Question 423**

**Can a hospital in India legally deny emergency treatment for inability to pay?**

**A.** Yes, hospitals can always deny treatment without payment
**B.** No, emergency care cannot legally be denied on this basis
**C.** Yes, but only in private hospitals
**D.** No, but only for children under 5

**Correct Answer:** Option (B) — No, emergency care cannot legally be denied on this basis

**Explanation:** *Emergency treatment cannot legally be denied based on a patient's inability to pay immediately.*

**Question 424**

**Why might waiting times sometimes be longer at government hospitals compared to private hospitals?**

**A.** Because government hospitals never see genuine patient demand
**B.** Because government hospitals often serve a very high patient volume, given their free or subsidised care
**C.** Because government hospitals are legally required to delay all patients
**D.** Because private hospitals never experience any waiting times at all

**Correct Answer:** Option (B) — Because government hospitals often serve a very high patient volume, given their free or subsidised care

**Explanation:** *Government hospitals often serve very high patient volumes due to offering free or subsidised care, which can contribute to longer waiting times.*

**Question 425**

**Which document outlines patients' rights in India, drafted by the National Human Rights Commission?**

**A.** The Right to Information Act
**B.** The Charter of Patients' Rights
**C.** The Consumer Protection Act
**D.** The Right to Education Act

**Correct Answer:** Option (B) — The Charter of Patients' Rights

**Explanation:** *The Charter of Patients' Rights, drafted by the NHRC in 2018, outlines the rights every patient is entitled to.*

**Question 426**

**Why might a hospital's 'Ayushman Mitra' role be important for beneficiaries?**

**A.** Because Ayushman Mitras have no defined role in the PM-JAY process
**B.** Because they help guide beneficiaries through verification and the cashless treatment process at empanelled hospitals
**C.** Because they only handle unrelated administrative tasks
**D.** Because their role is limited to non-medical facility maintenance

**Correct Answer:** Option (B) — Because they help guide beneficiaries through verification and the cashless treatment process at empanelled hospitals

**Explanation:** *Ayushman Mitras help guide beneficiaries through verification and the overall cashless treatment process at empanelled hospitals.*

**Question 427**

**Which organisation coordinates organ and tissue donation across India?**

**A.** NOTTO
**B.** FSSAI
**C.** IRDAI
**D.** NCVBDC

**Correct Answer:** Option (A) — NOTTO

**Explanation:** *NOTTO (National Organ and Tissue Transplant Organisation) coordinates organ and tissue donation nationally.*

**Question 428**

**What is the primary role of the National Health Authority (NHA) in India?**

**A.** Regulating food safety standards
**B.** Implementing Ayushman Bharat PM-JAY nationwide
**C.** Coordinating organ donation
**D.** Setting blood donation standards

**Correct Answer:** Option (B) — Implementing Ayushman Bharat PM-JAY nationwide

**Explanation:** *The National Health Authority (NHA) is responsible for implementing the Ayushman Bharat PM-JAY scheme across India.*

**Question 429**

**What government portal helps citizens check blood bank stock availability?**

**A.** e-Raktkosh
**B.** DigiLocker
**C.** UMANG
**D.** CoWIN

**Correct Answer:** Option (A) — e-Raktkosh

**Explanation:** *e-Raktkosh is the government portal that allows citizens to check blood bank information and stock availability.*

**Question 430**

**Why is 'knowing key helpline numbers in advance' considered more valuable than searching for them during an emergency?**

**A.** Because searching during an emergency is always faster than advance preparation
**B.** Because advance knowledge saves critical time exactly when quick action matters most
**C.** Because helpline numbers are impossible to find quickly regardless of preparation
**D.** Because emergencies never require immediate numerical information

**Correct Answer:** Option (B) — Because advance knowledge saves critical time exactly when quick action matters most

**Explanation:** *Knowing key numbers in advance saves critical time during a genuine emergency, when quick action often matters most.*

**Question 431**

**Does an organ donor pledge override the need for family consent in India?**

**A.** Yes, family consent is never required if a pledge exists
**B.** No, family consent is still required at the time of donation
**C.** Yes, but only for tissue donation
**D.** No first aid or consent process applies to organ donation

**Correct Answer:** Option (B) — No, family consent is still required at the time of donation

**Explanation:** *Even with a signed pledge, family consent is still required at the time of donation in India.*

**Question 432**

**What does 'cashless treatment' mean in the context of health insurance?**

**A.** The patient pays the full amount and gets reimbursed months later
**B.** The hospital bills the insurer directly, without requiring upfront patient payment
**C.** Only cash payments are accepted
**D.** Treatment is provided completely free with no insurer involvement

**Correct Answer:** Option (B) — The hospital bills the insurer directly, without requiring upfront patient payment

**Explanation:** *Cashless treatment means the hospital bills the insurer directly, so the patient does not need to pay upfront.*

**Question 433**

**Why might 'transparency in choice of medicines or tests' be listed among patient rights?**

**A.** Because patients have no legitimate interest in medicine or test choices
**B.** Because it allows patients to make informed decisions and avoid unnecessary or unclear costs
**C.** Because this right applies only to government hospitals
**D.** Because transparency in this area has no bearing on patient trust

**Correct Answer:** Option (B) — Because it allows patients to make informed decisions and avoid unnecessary or unclear costs

**Explanation:** *Transparency in medicine and test choices allows patients to make informed decisions and helps avoid unnecessary or unclear costs.*

**Question 434**

**Why might this module conclude that 'an informed patient is an active partner in their own care' rather than a passive recipient?**

**A.** Because patients have no meaningful role in their own healthcare decisions
**B.** Because understanding one's rights, options, and entitlements allows more active, confident participation in healthcare decisions
**C.** Because active participation in care has no bearing on outcomes
**D.** Because passive acceptance of care decisions is always the recommended approach

**Correct Answer:** Option (B) — Because understanding one's rights, options, and entitlements allows more active, confident participation in healthcare decisions

**Explanation:** *Understanding one's rights, options, and entitlements enables more active, confident participation in healthcare decisions, rather than passive acceptance alone.*

**Question 435**

**Why is it useful to understand both 'empanelled hospital' status and 'cashless treatment' together when planning for a medical emergency?**

**A.** Because these two concepts are entirely unrelated to each other
**B.** Because cashless treatment under a scheme is typically only available at hospitals that are actually empanelled under that specific scheme
**C.** Because empanelment status has no bearing on whether cashless treatment is possible
**D.** Because cashless treatment is available at every hospital regardless of empanelment

**Correct Answer:** Option (B) — Because cashless treatment under a scheme is typically only available at hospitals that are actually empanelled under that specific scheme

**Explanation:** *Cashless treatment under a scheme like PM-JAY is generally only available at hospitals officially empanelled under that scheme, making both concepts practically linked.*

**Question 436**

**What is the minimum weight requirement for blood donation?**

**A.** 30 kg
**B.** 45 kg
**C.** 70 kg
**D.** 100 kg

**Correct Answer:** Option (B) — 45 kg

**Explanation:** *A minimum body weight of 45 kg is required to be eligible to donate blood.*

**Question 437**

**Why does India's healthcare rights framework explicitly protect the 'right to non-discrimination in care'?**

**A.** Because non-discrimination has no bearing on healthcare quality or access
**B.** Because ensuring equal treatment regardless of background helps guarantee fair access to care for all patients
**C.** Because this right only applies to specific religious institutions
**D.** Because discrimination in healthcare settings has never been a documented concern

**Correct Answer:** Option (B) — Because ensuring equal treatment regardless of background helps guarantee fair access to care for all patients

**Explanation:** *Guaranteeing non-discrimination helps ensure fair, equal access to healthcare for all patients, regardless of personal background.*

**Question 438**

**How much cashless health cover does Ayushman Bharat PM-JAY provide per family per year?**

**A.** ₹50,000
**B.** ₹1 lakh
**C.** ₹5 lakh
**D.** ₹50 lakh

**Correct Answer:** Option (C) — ₹5 lakh

**Explanation:** *PM-JAY provides cashless hospitalisation cover of up to ₹5 lakh per family per year.*

**Question 439**

**Since October 2024, which group is covered under Ayushman Bharat regardless of income?**

**A.** All children under 5
**B.** All citizens aged 70 and above
**C.** Only government employees
**D.** Only urban residents

**Correct Answer:** Option (B) — All citizens aged 70 and above

**Explanation:** *Since October 2024, all citizens aged 70 and above are covered under Ayushman Bharat regardless of income.*

**Question 440**

**How many life-saving organs can a single deceased donor typically provide?**

**A.** Only 1
**B.** Up to 6
**C.** Exactly 10
**D.** None, only tissues can be donated

**Correct Answer:** Option (B) — Up to 6

**Explanation:** *A deceased donor can typically provide up to 6 life-saving organs, including kidneys, liver, heart, lungs, pancreas, and intestine.*

**Question 441**

**How often can a man typically donate blood?**

**A.** Every week
**B.** Every 3 months
**C.** Every 10 years
**D.** Only once in a lifetime

**Correct Answer:** Option (B) — Every 3 months

**Explanation:** *Men can typically donate blood every 3 months, according to standard National Blood Transfusion Council guidelines.*

**Question 442**

**Which law legalised organ donation from deceased donors in India?**

**A.** The Factories Act, 1948
**B.** The Transplantation of Human Organs and Tissues Act, 1994
**C.** The Motor Vehicles Act
**D.** The Consumer Protection Act

**Correct Answer:** Option (B) — The Transplantation of Human Organs and Tissues Act, 1994

**Explanation:** *The Transplantation of Human Organs and Tissues Act, 1994 legalised deceased organ donation and recognised brain death.*

**Question 443**

**Why might a citizen's awareness of both government schemes and private insurance options be considered valuable together?**

**A.** Because only one type of coverage is ever relevant to any individual
**B.** Because understanding both options allows a citizen to choose or combine the coverage that best fits their circumstances
**C.** Because private and government coverage are always mutually exclusive with no overlap possible
**D.** Because awareness of options has no bearing on financial protection

**Correct Answer:** Option (B) — Because understanding both options allows a citizen to choose or combine the coverage that best fits their circumstances

**Explanation:** *Understanding both government schemes and private insurance options allows a citizen to make more informed choices suited to their specific circumstances.*

**Question 444**

**Which number often prioritises pregnant women and children for free ambulance service?**

**A.** 102
**B.** 112
**C.** 101
**D.** 1070

**Correct Answer:** Option (A) — 102

**Explanation:** *102 is often used for free ambulance services that prioritise pregnant women and children.*

**Question 445**

**Why might 'private hospitals never accept government health schemes' be considered a myth?**

**A.** Because this statement is entirely accurate
**B.** Because thousands of private hospitals are empanelled under PM-JAY nationwide, directly contradicting this claim
**C.** Because private hospitals are legally barred from any scheme participation
**D.** Because government schemes only apply to public hospitals by definition

**Correct Answer:** Option (B) — Because thousands of private hospitals are empanelled under PM-JAY nationwide, directly contradicting this claim

**Explanation:** *Thousands of private hospitals are empanelled under PM-JAY, directly disproving the myth that private facilities never accept government schemes.*

**Question 446**

**Why does the Charter of Patients' Rights include the 'right to confidentiality, privacy, and dignity'?**

**A.** Because confidentiality has no real relevance to quality healthcare
**B.** Because protecting a patient's private information and dignity supports trust and honest communication with healthcare providers
**C.** Because this right only applies to mental health treatment, not general care
**D.** Because confidentiality is solely a legal formality with no practical benefit

**Correct Answer:** Option (B) — Because protecting a patient's private information and dignity supports trust and honest communication with healthcare providers

**Explanation:** *Protecting confidentiality and dignity supports trust between patients and providers, encouraging more open and honest communication about health concerns.*

**Question 447**

**What is the Ayushman Bharat PM-JAY helpline number?**

**A.** 108
**B.** 112
**C.** 14555
**D.** 1098

**Correct Answer:** Option (C) — 14555

**Explanation:** *14555 (also 1800-11-4477) is the official Ayushman Bharat PM-JAY helpline number.*

**Question 448**

**Why is 'right to emergency care regardless of ability to pay' considered one of the most critical patient rights?**

**A.** Because it has no real bearing on health outcomes
**B.** Because it ensures financial status never becomes a barrier to receiving urgent, potentially life-saving treatment
**C.** Because emergency care is rarely needed in practice
**D.** Because this right only applies to a small subset of hospitals

**Correct Answer:** Option (B) — Because it ensures financial status never becomes a barrier to receiving urgent, potentially life-saving treatment

**Explanation:** *This right ensures that financial status can never become a barrier to receiving urgent, potentially life-saving emergency treatment.*

**Question 449**

**Which level of India's healthcare system is typically the first point of contact for common illnesses?**

**A.** Tertiary care
**B.** Primary care
**C.** Only private specialty clinics
**D.** International referral centres

**Correct Answer:** Option (B) — Primary care

**Explanation:** *Primary care, through facilities like Ayushman Arogya Mandirs and PHCs, is typically the first point of contact for common illnesses.*

**Question 450**

**What is the minimum age to donate blood in India?**

**A.** 12 years
**B.** 18 years
**C.** 25 years
**D.** 40 years

**Correct Answer:** Option (B) — 18 years

**Explanation:** *The minimum age to donate blood in India is 18 years, as per National Blood Transfusion Council standards.*

**Question 451**

**Which of these is a recommended home safety practice?**

**A.** Leaving staircases cluttered
**B.** Keeping electrical outlets and cords in safe condition
**C.** Ignoring fire extinguisher accessibility
**D.** Removing all lighting from hallways

**Correct Answer:** Option (B) — Keeping electrical outlets and cords in safe condition

**Explanation:** *Keeping electrical outlets and cords in safe condition is a basic, important home safety practice.*

**Question 452**

**Why might combining 'daily health' and 'emergency preparedness' checklists into one broader system be more effective than treating them as entirely separate efforts?**

**A.** Because daily habits and emergency readiness are completely unrelated concerns

**B.** Because both ultimately support the same overarching goal of protecting a family's health, making an integrated system more coherent and manageable

**C.** Because combining checklists always makes them more complicated and less useful

**D.** Because emergency preparedness should never be connected to everyday habits

**Correct Answer:** Option (B) — Because both ultimately support the same overarching goal of protecting a family's health, making an integrated system more coherent and manageable

**Explanation:** *Since both daily habits and emergency readiness support the same overarching goal of protecting a family's health, an integrated system is often more coherent and manageable than treating them separately.*

**Question 453**

**Why might reviewing a family's health insurance or Ayushman Bharat status be included in a 'final' household checklist rather than treated as a one-time setup task?**

**A.** Because coverage status, family composition, or scheme rules can change over time, warranting periodic confirmation

**B.** Because insurance status never changes once initially confirmed

**C.** Because this check has no bearing on actual healthcare access during an emergency

**D.** Because final checklists should only include brand-new items never covered before

**Correct Answer:** Option (A) — Because coverage status, family composition, or scheme rules can change over time, warranting periodic confirmation

**Explanation:** *Coverage status, scheme rules, or family circumstances can change over time, making periodic confirmation a valuable part of ongoing preparedness.*

**Question 454**

**A family reviews their home safety checklist only once, when they first moved in, five years ago. Why is this a common mistake?**

**A.** Because home safety needs never change over time

**B.** Because household composition and hazards can change significantly over years, making periodic review important

**C.** Because reviewing home safety checklists has no practical value

**D.** Because a home safety checklist should only ever be reviewed once

**Correct Answer:** Option (B) — Because household composition and hazards can change significantly over years, making periodic review important

**Explanation:** *Household composition and specific hazards can change significantly over time, making periodic review an important, ongoing practice.*

**Question 455**

**What should be checked regularly as part of medicine safety?**

**A.** The colour of the packaging only

**B.** Expiry dates

**C.** The brand name popularity

**D.** The manufacturer's stock price

**Correct Answer:** Option (B) — Expiry dates

**Explanation:** *Checking expiry dates regularly is an important part of maintaining medicine safety at home.*

**Question 456**

**Why might 'emergency preparedness is expensive' be considered a myth, based on this module's guidance?**

**A.** Because most described checklist items primarily require time, attention, and small effort rather than significant financial cost

**B.** Because emergency preparedness always requires substantial financial investment

**C.** Because this myth is entirely accurate and should be accepted

**D.** Because cost has no bearing on how prepared a family actually becomes

**Correct Answer:** Option (A) — Because most described checklist items primarily require time, attention, and small effort rather than significant financial cost

**Explanation:** *Most of the described preparedness actions require modest time and attention rather than significant financial investment, challenging the myth that preparedness is expensive.*

**Question 457**

**Why does this module tie together earlier JanGyan modules (like first aid and disaster preparedness) into practical checklists, rather than repeating their full content?**

**A.** Because the earlier modules contained no useful information worth referencing

**B.** Because this module's purpose is to convert prior knowledge into an actionable, ready-to-use system rather than duplicate content

**C.** Because checklists always replace the need for foundational knowledge entirely

**D.** Because tying modules together has no practical or educational value

**Correct Answer:** Option (B) — Because this module's purpose is to convert prior knowledge into an actionable, ready-to-use system rather than duplicate content

**Explanation:** *This module's purpose is to convert previously learned knowledge into an actionable, ready-to-use system, rather than duplicating earlier detailed content.*

**Question 458**

**What is the final, consolidated checklist in this module designed to represent?**

**A.** A one-time task with no further relevance

**B.** An ongoing, regularly reviewed system bringing together all household readiness checks

**C.** A checklist only relevant to healthcare workers

**D.** A legal requirement with no health significance

**Correct Answer:** Option (B) — An ongoing, regularly reviewed system bringing together all household readiness checks

**Explanation:** *The Final Health & Emergency Checklist is designed as an ongoing, regularly reviewed system for maintaining full household readiness.*

**Question 459**

**What does the Integrated Disease Surveillance Programme (IDSP) primarily track?**

**A.** Government tax revenue

**B.** Seasonal and outbreak-prone disease trends nationwide

**C.** Road traffic accidents only

**D.** School examination results

**Correct Answer:** Option (B) — Seasonal and outbreak-prone disease trends nationwide

**Explanation:** *IDSP is India's national system for tracking seasonal and outbreak-prone disease trends across the country.*

**Question 460**

**Why does this module recommend that even a family in a low-disaster-risk area maintain basic emergency checklists?**

**A.** Because certain basics, like emergency contacts and first aid readiness, remain broadly useful regardless of a specific area's overall disaster risk profile

**B.** Because emergency checklists are only relevant in officially high-risk disaster zones

**C.** Because low-risk areas never experience any type of health emergency

**D.** Because maintaining checklists has no value outside disaster-prone regions

**Correct Answer:** Option (A) — Because certain basics, like emergency contacts and first aid readiness, remain broadly useful regardless of a specific area's overall disaster risk profile

**Explanation:** *Certain basics, like ready emergency contacts and first aid supplies, remain broadly useful for any household, regardless of a specific area's overall disaster risk profile.*

**Question 461**

**What is a key item on a daily health checklist?**

**A.** Skipping meals to save time

**B.** Balanced meals, adequate water, and physical activity

**C.** Avoiding sleep entirely

**D.** Ignoring hydration needs

**Correct Answer:** Option (B) — Balanced meals, adequate water, and physical activity

**Explanation:** *Balanced meals, sufficient water intake, and regular physical activity are key components of a daily health checklist.*

**Question 462**

**Why is 'knowing what to do' considered different from 'consistently doing it,' according to this module's core theme?**

**A.** Because knowledge and consistent action are always identical in practice

**B.** Because knowledge alone doesn't guarantee action, especially under stress, which is exactly the gap checklists are designed to close

**C.** Because consistent action requires no underlying knowledge at all

**D.** Because this distinction has no practical relevance to health outcomes

**Correct Answer:** Option (B) — Because knowledge alone doesn't guarantee action, especially under stress, which is exactly the gap checklists are designed to close

**Explanation:** *Knowledge alone doesn't guarantee consistent action, especially under stress — this gap is precisely what structured checklists are designed to close.*

**Question 463**

**What is the overall purpose of the Final Health & Emergency Checklist that closes this handbook?**

**A.** To introduce entirely new information not covered anywhere else

**B.** To bring together the key readiness points from across daily health, hygiene, emergencies, medicine, home safety, travel, and family preparedness into one reviewable list

**C.** To replace the need for any of the earlier checklists in this module

**D.** To serve a purely decorative purpose with no practical function

**Correct Answer:** Option (B) — To bring together the key readiness points from across daily health, hygiene, emergencies, medicine, home safety, travel, and family preparedness into one reviewable list

**Explanation:** *The Final Health & Emergency Checklist consolidates the key readiness points from across this entire module into one practical, reviewable reference.*

**Question 464**

**Which helpline is specifically included in the Emergency Contact Checklist for a child in distress?**

**A.** 1098 (CHILDLINE)
**B.** 104
**C.** 108
**D.** 1070

**Correct Answer:** Option (A) — 1098 (CHILDLINE)

**Explanation:** *1098, the CHILDLINE number, is specifically included in the checklist for situations involving a child in distress.*

**Question 465**

**What should a family agree on as part of family health preparedness?**

**A.** An emergency meeting point
**B.** Which television channel to watch
**C.** A shared holiday destination only
**D.** Nothing beyond daily routines

**Correct Answer:** Option (A) — An emergency meeting point

**Explanation:** *Agreeing on an emergency meeting point is an important part of family health and disaster preparedness.*

**Question 466**

**Why does the Travel Health Tips checklist specifically recommend checking Ayushman Bharat portability before travelling within India?**

**A.** Because portability has no bearing on healthcare access while travelling
**B.** Because confirming portability in advance helps ensure coverage can actually be used if needed at the destination
**C.** Because Ayushman Bharat only ever applies at one specific hospital nationwide
**D.** Because this check is only relevant for international travel

**Correct Answer:** Option (B) — Because confirming portability in advance helps ensure coverage can actually be used if needed at the destination

**Explanation:** *Confirming portability in advance helps ensure that scheme coverage can genuinely be used if healthcare is needed while travelling within India.*

**Question 467**

**Why might 'one family member's awareness is enough' be considered a mistaken assumption in family preparedness?**

**A.** Because preparedness is more reliable when it doesn't depend on a single person being present or available
**B.** Because only one person should ever be responsible for family safety
**C.** Because sharing awareness across family members has no practical benefit
**D.** Because relying on one person is always the most efficient approach

**Correct Answer:** Option (A) — Because preparedness is more reliable when it doesn't depend on a single person being present or available

**Explanation:** *Preparedness works more reliably when it doesn't depend entirely on one specific person being present or available in an emergency.*

**Question 468**

**Why might a family keep vaccination records, insurance details, and emergency contacts together in one folder?**

**A.** Because scattering this information across multiple places is always more efficient
**B.** Because having them together allows quick, organised access during an unexpected health situation
**C.** Because such organisation has no practical benefit
**D.** Because this information is legally required to be kept separately

**Correct Answer:** Option (B) — Because having them together allows quick, organised access during an unexpected health situation

**Explanation:** *Keeping this information organised together allows for quick, confident access during an unexpected health situation.*

**Question 469**

**What is a core part of a personal hygiene checklist?**

**A.** Washing hands before eating and after using the toilet
**B.** Wearing the same clothes for a week
**C.** Avoiding regular bathing
**D.** Skipping dental care

**Correct Answer:** Option (A) — Washing hands before eating and after using the toilet

**Explanation:** *Washing hands before eating and after using the toilet is a fundamental personal hygiene practice.*

**Question 470**

**Why does this module emphasise involving the 'whole family' in preparedness planning rather than treating it as an individual task?**

**A.** Because preparedness that is shared across the family is more resilient than preparedness resting on just one person
**B.** Because individual preparedness is always sufficient for an entire household
**C.** Because family involvement has no bearing on the reliability of a preparedness plan
**D.** Because whole-family involvement is only relevant for very large households

**Correct Answer:** Option (A) — Because preparedness that is shared across the family is more resilient than preparedness resting on just one person

**Explanation:** *Preparedness shared across the whole family is more resilient and reliable than an approach that depends on just one individual's knowledge or presence.*

**Question 471**

**Why is 'a written list of each family member's regular medications' considered valuable, beyond just storing the medicines themselves?**

**A.** Because a written list has no practical use beyond the medicines' physical storage
**B.** Because it provides quick, clear information for caregivers or medical responders, especially in an emergency involving someone else
**C.** Because written lists are only useful for legal record-keeping
**D.** Because storing medicines safely alone is always sufficient without any accompanying documentation

**Correct Answer:** Option (B) — Because it provides quick, clear information for caregivers or medical responders, especially in an emergency involving someone else

**Explanation:** *A written medication list provides quick, clear information that caregivers or medical responders can use, especially helpful if someone else needs to assist during an emergency.*

**Question 472**

**What does the Family Health Preparedness checklist recommend regarding vaccination?**

**A.** Ignoring vaccination status entirely
**B.** Confirming every family member's vaccination status is up to date
**C.** Only tracking vaccination for children under 2
**D.** Assuming vaccination status never needs review

**Correct Answer:** Option (B) — Confirming every family member's vaccination status is up to date

**Explanation:** *Confirming that every family member's vaccination status is current is a key part of the family health preparedness checklist.*

**Question 473**

**A household updates its go-bag and checklists only after experiencing a minor emergency. Why is proactive review preferable to this reactive approach?**

**A.** Because reactive updating is always faster and more effective

**B.** Because proactive review helps ensure readiness before an emergency occurs, rather than only after a gap has already been exposed

**C.** Because reactive updating has no real drawbacks compared to proactive review

**D.** Because emergencies never reveal any genuine gaps in preparedness

**Correct Answer:** Option (B) — Because proactive review helps ensure readiness before an emergency occurs, rather than only after a gap has already been exposed

**Explanation:** *Proactive review helps ensure genuine readiness before an emergency occurs, rather than only identifying gaps after they've already caused a problem.*

**Question 474**

**Why do checklists help reduce errors, even for experienced people?**

**A.** Because they replace the need for any knowledge at all

**B.** Because they reduce reliance on memory, which can be unreliable under stress or repetition

**C.** Because checklists are only useful for complete beginners

**D.** Because checklists guarantee perfection with no possibility of error

**Correct Answer:** Option (B) — Because they reduce reliance on memory, which can be unreliable under stress or repetition

**Explanation:** *Checklists reduce reliance on memory, which can become unreliable under stress or repetitive tasks, helping prevent overlooked steps.*

**Question 475**

**Which season in India is most associated with dengue and malaria risk?**

**A.** Winter

**B.** Monsoon

**C.** Only early spring

**D.** Risk is identical year-round

**Correct Answer:** Option (B) — Monsoon

**Explanation:** *Monsoon season is most associated with dengue, malaria, and other vector-borne disease risks due to increased mosquito breeding.*

**Question 476**

**Why is winter specifically associated with increased respiratory illness risk in India?**

**A.** Because respiratory illnesses only occur in winter and never in other seasons

**B.** Because cold weather and indoor crowding can contribute to the spread of respiratory infections

**C.** Because winter has no seasonal effect on illness patterns

**D.** Because this association has no basis in health surveillance data

**Correct Answer:** Option (B) — Because cold weather and indoor crowding can contribute to the spread of respiratory infections

**Explanation:** *Cold weather and increased indoor crowding during winter can contribute to higher spread of respiratory infections.*

**Question 477**

**What is a key precaution during India's summer season?**

**A.** Avoiding all hydration

**B.** Staying hydrated and avoiding peak sun hours

**C.** Increasing sun exposure during midday

**D.** Ignoring signs of heat exhaustion

**Correct Answer:** Option (B) — Staying hydrated and avoiding peak sun hours

**Explanation:** *Staying hydrated and avoiding peak sun hours are key precautions to prevent heat-related illness during summer.*

**Question 478**

**Why is 'reviewing seasonal precautions as a recurring calendar reminder' suggested, rather than a one-off task?**

**A.** Because seasonal risks shift throughout the year, requiring updated precautions at each seasonal transition
**B.** Because seasonal precautions never actually change throughout the year
**C.** Because a single annual review covers all necessary precautions permanently
**D.** Because calendar reminders have no practical health benefit

**Correct Answer:** Option (A) — Because seasonal risks shift throughout the year, requiring updated precautions at each seasonal transition

**Explanation:** *Since health risks shift meaningfully with the seasons, a recurring reminder helps ensure precautions are updated appropriately throughout the year.*

**Question 479**

**A family packs a travel health kit only for long-distance trips, not shorter ones. Why might this be reconsidered?**

**A.** Because health risks are exclusively tied to distance travelled, not trip type
**B.** Because unexpected health needs can arise on any trip, regardless of distance, making basic preparation broadly useful
**C.** Because short trips never require any health-related preparation
**D.** Because travel health kits are only legally required for international travel

**Correct Answer:** Option (B) — Because unexpected health needs can arise on any trip, regardless of distance, making basic preparation broadly useful

**Explanation:** *Unexpected health needs can arise on any trip, making basic travel health preparation broadly useful, not just for long-distance travel.*

**Question 480**

**Why is 'portability' relevant to a family relocating or travelling between Indian states?**

**A.** Because portability refers to the ability to use a health scheme's benefits across different states or hospitals
**B.** Because portability only concerns physical luggage while travelling
**C.** Because health scheme benefits are always restricted to one specific hospital
**D.** Because portability has no connection to healthcare access

**Correct Answer:** Option (A) — Because portability refers to the ability to use a health scheme's benefits across different states or hospitals

**Explanation:** *Portability refers to being able to use health scheme benefits, like Ayushman Bharat, across different states or empanelled hospitals.*

**Question 481**

**Why is noting local emergency numbers for a travel destination useful, in addition to saving home-area numbers?**

**A.** Because emergency numbers are always identical across every state
**B.** Because some emergency services or specific numbers can vary by location, making destination-specific awareness valuable
**C.** Because local numbers are never actually needed while travelling
**D.** Because only international destinations require separate emergency numbers

**Correct Answer:** Option (B) — Because some emergency services or specific numbers can vary by location, making destination-specific awareness valuable

**Explanation:** *Since some emergency services or specific numbers can vary by state or region, knowing destination-specific numbers adds an extra layer of readiness while travelling.*

**Question 482**

**Why does this module suggest treating the Final Health & Emergency Checklist as something to revisit every few months, not complete once?**

**A.** Because circumstances, family composition, and readiness can change over time, requiring ongoing review

**B.** Because a single completion is always sufficient for permanent readiness

**C.** Because revisiting a checklist repeatedly has no practical value

**D.** Because the checklist becomes legally invalid after one use

**Correct Answer:** Option (A) — Because circumstances, family composition, and readiness can change over time, requiring ongoing review

**Explanation:** *Since circumstances and family needs can change over time, treating the checklist as an ongoing, periodically revisited tool ensures continued readiness.*

**Question 483**

**Why does this module recommend printing or saving checklists somewhere visible, like a fridge or noticeboard?**

**A.** Because visibility increases the likelihood that checklists are actually used and followed consistently

**B.** Because visible placement has no bearing on whether a checklist gets used

**C.** Because checklists are only effective if kept completely hidden from view

**D.** Because printed checklists are illegal to display in Indian households

**Correct Answer:** Option (A) — Because visibility increases the likelihood that checklists are actually used and followed consistently

**Explanation:** *Keeping checklists visible increases the likelihood that they are actually referenced and followed consistently in daily life.*

**Question 484**

**Why does this module recommend reviewing checklists on a set schedule rather than only when a problem arises?**

**A.** Because reactive checking is always more effective than proactive review

**B.** Because regular review helps catch issues before they become emergencies, rather than after

**C.** Because scheduled review has no real advantage over reactive checking

**D.** Because checklists are only useful after a problem has already occurred

**Correct Answer:** Option (B) — Because regular review helps catch issues before they become emergencies, rather than after

**Explanation:** *Regular, proactive review helps catch potential issues before they escalate into emergencies, rather than only reacting after a problem arises.*

**Question 485**

**Why does seasonal health guidance recommend removing stagnant water specifically before and during monsoon season?**

**A.** Because stagnant water has no connection to disease risk

**B.** Because stagnant water is a breeding ground for mosquitoes that spread diseases like dengue and malaria

**C.** Because this precaution is only relevant during summer

**D.** Because removing stagnant water is purely a cosmetic practice

**Correct Answer:** Option (B) — Because stagnant water is a breeding ground for mosquitoes that spread diseases like dengue and malaria

**Explanation:** *Stagnant water serves as a breeding ground for mosquitoes, making its removal an important precaution against dengue and malaria, especially during monsoon.*

**Question 486**

**Why might 'the best emergency plan is the one you never had to use' be an appropriate way to frame the value of preparedness?**

**A.** Because it suggests good preparedness aims to prevent or minimise harm, even if the plan itself is never dramatically tested

**B.** Because this statement implies preparedness plans are ultimately pointless

**C.** Because emergency plans are only valuable if they are frequently needed

**D.** Because this phrase has no real connection to the purpose of preparedness

**Correct Answer:** Option (A) — Because it suggests good preparedness aims to prevent or minimise harm, even if the plan itself is never dramatically tested

**Explanation:** *This framing suggests that good preparedness aims to prevent or minimise harm — success can mean the plan quietly worked, not that it was dramatically tested.*

**Question 487**

**Why does seasonal precaution guidance specifically recommend monitoring elderly family members during winter?**

**A.** Because elderly individuals may be more vulnerable to cold-related respiratory illness, warranting closer attention

**B.** Because winter poses no additional risk to elderly individuals specifically

**C.** Because monitoring elderly family members is only relevant during summer heatwaves

**D.** Because this recommendation applies equally to all age groups with no special elderly focus

**Correct Answer:** Option (A) — Because elderly individuals may be more vulnerable to cold-related respiratory illness, warranting closer attention

**Explanation:** *Elderly individuals can be more vulnerable to cold-related respiratory illness during winter, making closer monitoring a valuable precaution.*

**Question 488**

**Why should medicines be stored out of children's reach?**

**A.** Because this has no real safety benefit

**B.** Because it helps prevent accidental ingestion and poisoning in children

**C.** Because medicines never pose any risk to children

**D.** Because storage location has no bearing on child safety

**Correct Answer:** Option (B) — Because it helps prevent accidental ingestion and poisoning in children

**Explanation:** *Storing medicines out of children's reach helps prevent accidental ingestion, which could otherwise lead to poisoning.*

**Question 489**

**Why is it recommended to keep emergency numbers written on paper, not just saved in a phone?**

**A.** Because paper copies are always more accurate

**B.** Because phone batteries can fail exactly when they're needed most

**C.** Because digital numbers are illegal to use in emergencies

**D.** Because paper copies replace the need for calling entirely

**Correct Answer:** Option (B) — Because phone batteries can fail exactly when they're needed most

**Explanation:** *A written copy ensures access to emergency numbers even if a phone's battery fails during a critical moment.*

**Question 490**

**Which number appears on the Emergency Contact Checklist for poisoning-related emergencies?**

**A.** 101

**B.** 1800-116-117

**C.** 1070

**D.** 14555

**Correct Answer:** Option (B) — 1800-116-117

**Explanation:** *1800-116-117, the National Poisons Information Centre, is listed on the checklist for poisoning-related emergencies.*

**Question 491**

**What should a basic travel health kit include?**

**A.** Only souvenirs
**B.** First aid essentials and regular medications
**C.** Extra electronics with no medical relevance
**D.** Nothing beyond a phone charger

**Correct Answer:** Option (B) — First aid essentials and regular medications

**Explanation:** *A basic travel health kit should include first aid essentials and any regular medications a traveller needs.*

**Question 492**

**Why is it recommended to drink only sealed or trusted water sources while travelling?**

**A.** Because bottled water always tastes better
**B.** Because it reduces the risk of waterborne illness from unknown water quality
**C.** Because sealed water has no real safety benefit
**D.** Because this recommendation only applies outside India

**Correct Answer:** Option (B) — Because it reduces the risk of waterborne illness from unknown water quality

**Explanation:** *Drinking from sealed or trusted sources reduces the risk of waterborne illness from water of uncertain quality.*

**Question 493**

**What does the Home Safety Tips checklist recommend regarding fire readiness?**

**A.** Avoiding any fire-related equipment at home
**B.** Keeping a working fire extinguisher or fire blanket accessible
**C.** Relying solely on neighbours during a fire
**D.** Storing fire equipment in a locked, inaccessible cupboard

**Correct Answer:** Option (B) — Keeping a working fire extinguisher or fire blanket accessible

**Explanation:** *Keeping a working fire extinguisher or fire blanket accessible is part of the recommended home safety checklist.*

**Question 494**

**Why does family preparedness guidance recommend that at least one adult in the household know basic first aid and CPR?**

**A.** Because having this knowledge readily available within the household can be critical during a genuine emergency before professional help arrives
**B.** Because only healthcare professionals are ever expected to know first aid or CPR
**C.** Because this knowledge is legally required for all Indian citizens
**D.** Because first aid and CPR knowledge has no bearing on family emergency outcomes

**Correct Answer:** Option (A) — Because having this knowledge readily available within the household can be critical during a genuine emergency before professional help arrives

**Explanation:** *Having at least one household member trained in basic first aid and CPR can be critical during the minutes before professional help arrives.*

**Question 495**

**Why might 'checklists are only useful for beginners' be specifically challenged using examples from aviation and surgery?**

**A.** Because these fields never actually use checklists in practice
**B.** Because even highly experienced professionals in these fields rely on checklists to prevent avoidable errors, showing checklists remain valuable regardless of expertise
**C.** Because aviation and surgery are entirely unrelated to general health checklists
**D.** Because expertise always eliminates the need for any structured checklist

**Correct Answer:** Option (B) — Because even highly experienced professionals in these fields rely on checklists to prevent avoidable errors, showing checklists remain valuable regardless of expertise

**Explanation:** *Even highly experienced professionals in fields like aviation and surgery rely on checklists, demonstrating that expertise doesn't eliminate the value of structured, repeatable safety steps.*

**Question 496**

**Which number should be included in every family's emergency contact checklist for unified emergency response?**

**A.** 100
**B.** 112
**C.** 1070
**D.** 1098

**Correct Answer:** Option (B) — 112

**Explanation:** *112 is India's unified emergency number and should be included in every family's emergency contact checklist.*

**Question 497**

**Why might 'reassessing travel health preparation before every trip, not just long-distance ones' be considered good practice?**

**A.** Because only long-distance trips carry any health-related risk
**B.** Because even short trips can present unexpected health needs, making consistent preparation a valuable habit
**C.** Because reassessment before every trip has no real practical benefit
**D.** Because travel health kits should only be assembled for international travel

**Correct Answer:** Option (B) — Because even short trips can present unexpected health needs, making consistent preparation a valuable habit

**Explanation:** *Even short trips can present unexpected health needs, making consistent preparation before any trip a genuinely valuable habit.*

**Question 498**

**Why should a home first aid kit be checked periodically rather than assembled only once?**

**A.** Because kits never need any maintenance once assembled
**B.** Because items can be used, expire, or become outdated over time
**C.** Because periodic checks have no practical value
**D.** Because a first aid kit should be discarded after one use regardless of contents

**Correct Answer:** Option (B) — Because items can be used, expire, or become outdated over time

**Explanation:** *Since items can be used, expire, or become outdated, periodic checks help ensure the kit remains genuinely ready for use.*

**Question 499**

**Why might this module be considered a fitting conclusion to the entire Health & Emergency Awareness category, rather than an entirely separate topic?**

**A.** Because it repeats each earlier module's content in full detail
**B.** Because it consolidates practical action from across all previous modules into a single, reusable, everyday system
**C.** Because it introduces entirely new topics unrelated to earlier modules
**D.** Because concluding modules should always be unrelated to what came before

**Correct Answer:** Option (B) — Because it consolidates practical action from across all previous modules into a single, reusable, everyday system

**Explanation:** *This module consolidates practical action from across all previous modules into a single, reusable, everyday checklist system, making it a fitting conclusion to the category.*

**Question 500**

**Why does this module's closing message emphasise having 'a system you actually follow' over simply 'knowing everything'?**

**A.** Because knowledge without consistent follow-through provides limited real-world protection compared to a reliably followed system
**B.** Because knowing everything is always more valuable than having any practical system in place
**C.** Because systems and knowledge are functionally identical concepts
**D.** Because consistent follow-through has no bearing on actual safety outcomes

**Correct Answer:** Option (A) — Because knowledge without consistent follow-through provides limited real-world protection compared to a reliably followed system

**Explanation:** *Knowledge without consistent follow-through offers limited real protection — a reliably followed system, even if simpler, tends to provide more genuine safety benefit.*
