JanGyan — Learn Without Limits

MCQ HANDBOOK

Environment & Civic Responsibility

Category: Environment & Civic Responsibility

> *"500 questions, one purpose — turning ten modules of learning into knowledge you can prove, apply, and trust."*

500 Questions | 4 Options Each | Answers & Explanations Included

Question 1

What does the term 'environment' primarily refer to?

A. Only the plants and animals in an area
B. Everything living and non-living that surrounds and sustains life
C. Only man-made structures
D. Only the atmosphere

Correct Answer: Option (B)

Short Explanation:
The environment includes both biotic (living) and abiotic (non-living) components that together sustain life.

Question 2

Which of the following is an abiotic component of the environment?

A. Bacteria
B. Sunlight
C. Fungi
D. Trees

Correct Answer: Option (B)

Short Explanation:
Abiotic components are non-living physical and chemical factors such as sunlight, air, water, and soil.

Question 3

Which of the following best defines an ecosystem?

A. A single species living alone
B. A community of organisms interacting with each other and their physical environment
C. A protected forest area only
D. A man-made park

Correct Answer: Option (B)

Short Explanation:
An ecosystem is a functional unit where living organisms interact with each other and their non-living surroundings.

Question 4

Biodiversity refers to variety of life at which levels?

A. Only species level
B. Genetic, species, and ecosystem levels
C. Only genetic level
D. Only ecosystem level

Correct Answer: Option (B)

Short Explanation:
Biodiversity operates at three interconnected levels: genetic, species, and ecosystem diversity.

Question 5

Which commission first defined 'sustainable development'?

A. Swaran Singh Committee
B. Brundtland Commission
C. Justice Verma Committee
D. Chipko Committee

Correct Answer: Option (B)

Short Explanation:
The Brundtland Commission (1987) defined sustainable development as meeting present needs without compromising future generations' ability to meet theirs.

Question 6

What are the three pillars of sustainable development?

A. Political, Social, Cultural
B. Environmental, Social, Economic
C. Legal, Environmental, Technical
D. Economic, Political, Legal

Correct Answer: Option (B)

Short Explanation:
Sustainable development balances Environmental protection, Social equity, and Economic viability together.

Question 7

India is classified internationally as a:

A. Water-rich nation only
B. Megadiverse country
C. Desert nation
D. Non-biodiverse country

Correct Answer: Option (B)

Short Explanation:
India is one of only 17 globally recognised megadiverse countries, home to a disproportionate share of the world's species.

Question 8

How many globally recognised biodiversity hotspots does India host?

A. Two
B. Three
C. Four
D. Six

Correct Answer: Option (C)

Short Explanation:
India hosts four biodiversity hotspots: the Himalayas, Western Ghats, Indo-Burma region, and Sundaland.

Question 9

Which of the following is an example of a natural resource?

A. Plastic bottle
B. Sunlight
C. Mobile phone
D. Synthetic fabric

Correct Answer: Option (B)

Short Explanation:
Sunlight is a naturally occurring energy source that humans use directly, making it a natural resource.

Question 10

The maximum population an ecosystem can sustainably support is called its:

A. Ecological footprint
B. Carrying capacity
C. Biomass index
D. Resource ceiling

Correct Answer: Option (B)

Short Explanation:
Carrying capacity refers to the maximum population size an ecosystem can support without degrading.

Question 11

Which SDG specifically addresses 'Clean Water and Sanitation'?

A. SDG 6
B. SDG 7
C. SDG 11
D. SDG 13

Correct Answer: Option (A)

Short Explanation:
SDG 6 of the United Nations Sustainable Development Goals focuses on ensuring availability of clean water and sanitation for all.

Question 12

Which SDG focuses on 'Climate Action'?

A. SDG 11
B. SDG 12
C. SDG 13
D. SDG 15

Correct Answer: Option (C)

Short Explanation:
SDG 13 specifically calls for urgent action to combat climate change and its impacts.

Question 13

What is the 'ecological footprint' of an individual or nation?

A. The area of forest they own
B. A measure of land and resources consumed relative to what nature can regenerate
C. The number of endangered species they protect
D. Their total population size

Correct Answer: Option (B)

Short Explanation:
Ecological footprint measures how much productive land and resources are used relative to nature's regenerative capacity.

Question 14

Which Indian law is considered the 'umbrella legislation' for environmental protection?

A. Wildlife Protection Act, 1972
B. Environment (Protection) Act, 1986
C. Forest Act, 1927
D. Water Act, 1974

Correct Answer: Option (B)

Short Explanation:
The Environment (Protection) Act, 1986 empowers the government to regulate and act against any activity harming the environment, making it the umbrella law.

Question 15

The Environment (Protection) Act, 1986 was enacted largely in response to which event?

A. Chipko Movement
B. Bhopal Gas Tragedy
C. Silent Valley Movement
D. Namami Gange launch

Correct Answer: Option (B)

Short Explanation:
The Act was passed in the aftermath of the 1984 Bhopal Gas Tragedy to strengthen India's environmental regulatory framework.

Question 16

Which body is India's national pollution monitoring and standard-setting authority?

A. NDMA
B. Central Pollution Control Board (CPCB)
C. NTCA
D. BEE

Correct Answer: Option (B)

Short Explanation:
The CPCB sets and enforces national standards for air and water quality across India.

Question 17

Which of the following is a producer in an ecosystem's food chain?

A. Lion
B. Deer
C. Grass
D. Vulture

Correct Answer: Option (C)

Short Explanation:
Producers, such as grass and other plants, convert sunlight into energy through photosynthesis, forming the base of the food chain.

Question 18

Decomposers in an ecosystem primarily function to:

A. Hunt herbivores
B. Break down dead organic matter and recycle nutrients
C. Produce oxygen only
D. Store water underground

Correct Answer: Option (B)

Short Explanation:
Decomposers like fungi and bacteria break down dead matter, returning nutrients to the soil for reuse.

Question 19

What is the 'precautionary principle' in environmental policy?

A. Acting only after scientific certainty is proven
B. Acting to prevent environmental harm even without full scientific certainty
C. Ignoring environmental risks until proven harmful
D. Delaying all environmental regulation

Correct Answer: Option (B)

Short Explanation:
The precautionary principle supports taking preventive action against environmental harm even when scientific evidence is not yet fully conclusive.

Question 20

Which of the following best describes 'habitat fragmentation'?

A. Combining small habitats into one large reserve
B. Breaking up large continuous habitats into smaller isolated patches
C. Planting new forests
D. Restoring wetlands

Correct Answer: Option (B)

Short Explanation:
Habitat fragmentation occurs when large habitats are divided into smaller, disconnected patches, often due to human development.

Question 21

According to the India State of Forest Report 2023, what is India's total forest and tree cover as a share of geographical area?

A. 15.17%
B. 20.17%
C. 25.17%
D. 33.17%

Correct Answer: Option (C)

Short Explanation:
The ISFR 2023 recorded India's combined forest and tree cover at 25.17% of the country's total geographical area.

Question 22

What is India's National Forest Policy target for forest cover?

A. 20% of geographical area
B. 25% of geographical area
C. 33% of geographical area
D. 50% of geographical area

Correct Answer: Option (C)

Short Explanation:
The National Forest Policy sets a target of 33% forest cover, a goal India has not yet fully achieved.

Question 23

Which of the following is NOT one of India's four biodiversity hotspots?

A. Western Ghats
B. Himalayas
C. Indo-Burma region
D. Amazon Basin

Correct Answer: Option (D)

Short Explanation:
The Amazon Basin is located in South America, not India; India's hotspots are the Himalayas, Western Ghats, Indo-Burma, and Sundaland.

Question 24

A citizen wants to reduce their environmental impact most effectively as a first step. What should they prioritise?

A. Recycling everything they buy
B. Reducing overall consumption before reusing or recycling
C. Buying more eco-labelled products
D. Ignoring packaging waste

Correct Answer: Option (B)

Short Explanation:
The waste hierarchy prioritises reducing consumption first, since preventing waste is more effective than managing it after the fact.

Question 25

Which of the following ecosystem services is provided by forests?

A. Manufacturing electronics
B. Water cycle regulation
C. Currency production
D. Internet connectivity

Correct Answer: Option (B)

Short Explanation:
Forests play a critical role in regulating the water cycle, including rainfall patterns and groundwater recharge.

Question 26

What does 'carrying capacity' help determine in wildlife conservation?

A. The number of tourists allowed in a city
B. The maximum sustainable population of a species in a given habitat
C. The market value of a species
D. The migratory pattern of birds

Correct Answer: Option (B)

Short Explanation:
Carrying capacity helps conservationists understand how many individuals of a species a habitat can support long-term.

Question 27

The National Green Tribunal (NGT) primarily handles:

A. Criminal cases unrelated to environment
B. Speedy resolution of environmental disputes
C. Only wildlife trafficking cases
D. Corporate tax disputes

Correct Answer: Option (B)

Short Explanation:
The NGT is a specialised judicial body established for the swift resolution of environmental cases outside regular courts.

Question 28

Which of these best represents 'genetic diversity' within biodiversity?

A. Different species of birds in a forest
B. Variation in traits within a single species, such as rice varieties
C. Number of forests in a country
D. Types of soil in a region

Correct Answer: Option (B)

Short Explanation:
Genetic diversity refers to the variety of genes within a single species, such as different traits among rice varieties.

Question 29

Which of the following actions best reflects the 'role of citizens' in environmental protection, as emphasised across sustainability education?

A. Waiting for the government to act alone
B. Reporting violations and adopting resource-conscious habits
C. Ignoring local environmental issues
D. Avoiding civic participation

Correct Answer: Option (B)

Short Explanation:
Citizens contribute to environmental protection through everyday conscious choices and active reporting of violations.

Question 30

Which of the following is considered a renewable natural resource?

A. Coal
B. Sunlight
C. Petroleum
D. Natural gas

Correct Answer: Option (B)

Short Explanation:
Sunlight is continuously replenished and does not deplete with use, making it a renewable resource.

Question 31

What is the primary goal of 'environmental awareness' as a concept?

A. Increasing industrial output
B. Helping people understand how their actions affect the environment
C. Reducing literacy rates
D. Promoting deforestation

Correct Answer: Option (B)

Short Explanation:
Environmental awareness builds understanding of the connection between everyday actions and environmental outcomes.

Question 32

Which global framework do India's national climate and environmental goals, like SDGs, generally align with?

A. World Trade Organization rules
B. United Nations Sustainable Development Goals
C. International Monetary Fund policy
D. World Health Assembly resolutions

Correct Answer: Option (B)

Short Explanation:
India's environmental policies are broadly aligned with the UN's Sustainable Development Goals framework, targeting outcomes by 2030.

Question 33

Which of the following is an example of an ecosystem, as opposed to a single species?

A. A tiger
B. A wetland
C. A single tree
D. A butterfly

Correct Answer: Option (B)

Short Explanation:
A wetland is an ecosystem comprising many interacting species and physical elements, unlike a single organism.

Question 34

If a factory dumps untreated effluents into a river, which Fundamental Duty under the Indian Constitution is most directly violated?

A. Duty to pay taxes
B. Duty to protect and improve the natural environment
C. Duty to vote
D. Duty to join the armed forces

Correct Answer: Option (B)

Short Explanation:
Article 51A(g) requires citizens to protect and improve the natural environment, which is violated by dumping untreated pollutants.

Question 35

What does 'ecosystem diversity' specifically refer to?

A. Diversity of habitats and ecological communities across a landscape
B. Diversity of political systems
C. Diversity of currencies
D. Diversity of languages

Correct Answer: Option (A)

Short Explanation:
Ecosystem diversity captures the range of different habitats — forests, wetlands, deserts — present across a landscape.

Question 36

A community depends heavily on a single wetland for both fishing and flood control. What ecological principle explains why protecting this wetland matters for multiple purposes?

A. Ecosystems provide multiple interconnected services simultaneously
B. Wetlands only provide one type of benefit
C. Fishing and flood control are unrelated activities
D. Wetlands have no ecological function

Correct Answer: Option (A)

Short Explanation:
Ecosystems like wetlands often provide multiple services at once, such as supporting biodiversity, fisheries, and natural flood regulation.

Question 37

Under the Environment (Protection) Act, 1986, who is empowered to take action against a polluting industry?

A. Only private citizens
B. The government, through its regulatory powers
C. Only international bodies
D. Only the judiciary, without government involvement

Correct Answer: Option (B)

Short Explanation:
The Act grants the government broad powers to regulate, inspect, and act against activities causing environmental harm.

Question 38

Which of the following best explains why India's forest cover, though increasing, still falls short of policy targets?

A. The target itself has never existed
B. Forest and tree cover (25.17%) remains below the 33% National Forest Policy target
C. India has already exceeded its target
D. Forest cover is measured only in urban areas

Correct Answer: Option (B)

Short Explanation:
Despite gradual increases, India's forest and tree cover of 25.17% remains below the 33% policy target.

Question 39

Which of these is a key reason biodiversity supports agricultural resilience?

A. It has no connection to agriculture
B. Diverse ecosystems support pollinators and pest control naturally
C. Biodiversity increases pesticide need
D. Biodiversity reduces crop yield

Correct Answer: Option (B)

Short Explanation:
Biodiversity supports natural pollination and pest control services that reduce dependence on chemical inputs in agriculture.

Question 40

What is the main difference between a 'natural resource' and a 'man-made resource'?

A. There is no difference
B. Natural resources occur in nature; man-made resources are created by humans
C. Man-made resources are always renewable
D. Natural resources are always non-renewable

Correct Answer: Option (B)

Short Explanation:
Natural resources like water and minerals occur in nature, while man-made resources like plastic are created through human processes.

Question 41

Why is 'awareness' described as the first and most powerful layer of environmental protection?

A. Because laws are ineffective
B. Because informed individuals are more likely to adopt protective habits and report violations
C. Because awareness replaces the need for policy
D. Because awareness has no practical impact

Correct Answer: Option (B)

Short Explanation:
Awareness drives voluntary behaviour change and civic reporting, both essential complements to formal environmental law.

Question 42

Which of the following would most directly disrupt the natural water cycle at a local level?

A. Planting trees
B. Large-scale deforestation and urban concretisation
C. Rainwater harvesting
D. Wetland conservation

Correct Answer: Option (B)

Short Explanation:
Deforestation and concretisation reduce natural water absorption and evaporation processes, disrupting the local water cycle.

Question 43

A student wants to reduce their personal ecological footprint. Which action would have the least meaningful impact?

A. Reducing single-use plastic consumption
B. Choosing public transport over private vehicles
C. Repainting their bicycle a different colour
D. Composting kitchen waste

Correct Answer: Option (C)

Short Explanation:
Repainting a bicycle has no meaningful environmental impact compared to consumption, transport, or waste-related choices.

Question 44

Which of the following government bodies is primarily responsible for forest cover assessment in India?

A. Forest Survey of India (FSI)
B. Reserve Bank of India
C. Election Commission of India
D. Ministry of Finance

Correct Answer: Option (A)

Short Explanation:
The Forest Survey of India conducts the biennial assessment published as the India State of Forest Report.

Question 45

What long-term consequence is most associated with unchecked biodiversity loss?

A. Increased agricultural stability
B. Reduced ecosystem resilience to shocks like drought or disease
C. No measurable consequence
D. Improved climate stability

Correct Answer: Option (B)

Short Explanation:
Biodiversity loss reduces an ecosystem's ability to withstand and recover from disturbances such as drought, pests, or disease.

Question 46

Which of the following best reflects the concept of intergenerational equity in sustainability?

A. Prioritising only current economic growth
B. Ensuring today's resource use does not compromise future generations' needs
C. Ignoring future population needs
D. Focusing solely on short-term profits

Correct Answer: Option (B)

Short Explanation:
Intergenerational equity is central to sustainable development, requiring that today's choices do not deprive future generations of resources.

Question 47

Under India's environmental governance structure, who typically has primary responsibility for local pollution enforcement?

A. Central government exclusively
B. State Pollution Control Boards, in coordination with CPCB
C. Foreign environmental agencies
D. Local sports authorities

Correct Answer: Option (B)

Short Explanation:
State Pollution Control Boards handle local enforcement, working in coordination with the national-level CPCB.

Question 48

Which best explains why sacred groves in India are considered informal biodiversity conservation sites?

A. They are legally identical to national parks
B. Traditional community practices have protected them from exploitation for generations
C. They are man-made plantations only
D. They have no ecological value

Correct Answer: Option (B)

Short Explanation:
Sacred groves are community-protected forest patches preserved through cultural and religious tradition, functioning as informal conservation areas.

Question 49

Which action best reflects applying the '3-pillar' sustainable development model to a housing project?

A. Focusing only on economic profit
B. Balancing environmental impact, community welfare, and economic viability together
C. Ignoring environmental clearance requirements
D. Prioritising speed over all other factors

Correct Answer: Option (B)

Short Explanation:
True sustainable development requires balancing environmental, social, and economic considerations together, not optimising just one.

Question 50

Why is understanding the 'components of environment' (biotic and abiotic) considered foundational to environmental science?

A. It has no practical use
B. It helps explain how living and non-living elements interact to sustain ecosystems
C. It is only relevant to biology exams
D. It replaces the need for environmental law

Correct Answer: Option (B)

Short Explanation:
Understanding biotic and abiotic components lays the groundwork for analysing how ecosystems function and respond to disturbance.

Question 51

What is the correct order of priority in the waste management hierarchy?

A. Recycle, Reuse, Reduce
B. Reduce, Reuse, Recycle
C. Reuse, Recycle, Reduce
D. Recycle, Reduce, Reuse

Correct Answer: Option (B)

Short Explanation:
The 3R hierarchy prioritises prevention first: Reduce waste generation, then Reuse items, and finally Recycle what remains.

Question 52

Which of the following is classified as 'wet waste'?

A. Plastic bottle
B. Vegetable peels
C. Glass jar
D. Metal scrap

Correct Answer: Option (B)

Short Explanation:
Wet waste refers to biodegradable organic matter such as vegetable peels and food scraps.

Question 53

Which of the following is classified as 'dry waste'?

A. Tea leaves
B. Eggshells
C. Paper
D. Cooked food leftovers

Correct Answer: Option (C)

Short Explanation:
Paper is a non-biodegradable, typically recyclable material, classifying it as dry waste.

Question 54

What is 'segregation at source'?

A. Sorting waste at a landfill only
B. Separating waste into categories at the point where it is generated
C. Burning waste immediately
D. Mixing all waste types together

Correct Answer: Option (B)

Short Explanation:
Segregation at source means separating waste into wet, dry, and hazardous categories right where it is produced, such as at home.

Question 55

Which rule mandates waste segregation into at least three categories in India?

A. Plastic Waste Management Rules, 2016
B. Solid Waste Management Rules, 2016
C. E-Waste Rules, 2022
D. Air Act, 1981

Correct Answer: Option (B)

Short Explanation:
The Solid Waste Management Rules, 2016 require every waste generator to segregate waste into wet, dry, and hazardous categories.

Question 56

What is composting?

A. Burning organic waste
B. Natural decomposition of organic waste into nutrient-rich manure
C. Melting plastic for reuse
D. Storing waste indefinitely

Correct Answer: Option (B)

Short Explanation:
Composting is the natural biological process where organic waste decomposes into nutrient-rich manure through microbial action.

Question 57

Where should discarded batteries and old electronics be disposed of?

A. Regular household trash
B. Authorised e-waste collection points
C. Open drains
D. Local river

Correct Answer: Option (B)

Short Explanation:
E-waste contains hazardous materials and must be handed over to authorised collectors under the E-Waste (Management) Rules, 2022.

Question 58

When did India's ban on identified single-use plastic items take effect?

A. 1 January 2020
B. 1 July 2022
C. 1 April 2018
D. 1 October 2023

Correct Answer: Option (B)

Short Explanation:
India's ban on identified single-use plastic items came into effect on 1 July 2022 under the Plastic Waste Management Amendment Rules.

Question 59

What does EPR stand for in the context of plastic waste management?

A. Environmental Protection Rule
B. Extended Producer Responsibility
C. Emergency Pollution Response
D. Efficient Product Recycling

Correct Answer: Option (B)

Short Explanation:
Extended Producer Responsibility requires producers and brand owners to manage the post-consumer life of their packaging.

Question 60

In which year was the Swachh Bharat Mission launched?

A. 2010
B. 2014
C. 2016
D. 2020

Correct Answer: Option (B)

Short Explanation:
The Swachh Bharat Mission (Clean India Mission) was launched in 2014 to improve sanitation and solid waste management nationwide.

Question 61

Which ministry administers the Swachh Bharat Mission (Urban)?

A. Ministry of Home Affairs
B. Ministry of Housing and Urban Affairs
C. Ministry of Finance
D. Ministry of Defence

Correct Answer: Option (B)

Short Explanation:
The Ministry of Housing and Urban Affairs (MoHUA) oversees the urban component of the Swachh Bharat Mission.

Question 62

Approximately how much municipal solid waste does India generate per day, according to CPCB data?

A. Around 16,000 tonnes
B. Around 60,000 tonnes
C. Over 1,60,000 tonnes
D. Over 5,00,000 tonnes

Correct Answer: Option (C)

Short Explanation:
CPCB data indicates India generates over 1,60,000 tonnes of municipal solid waste daily.

Question 63

What is a Material Recovery Facility (MRF)?

A. A landfill site
B. A facility where mixed recyclables are sorted and processed
C. A composting pit
D. A hazardous waste storage tank

Correct Answer: Option (B)

Short Explanation:
An MRF is a facility dedicated to sorting and processing mixed recyclable materials for reuse.

Question 64

Which city is frequently cited for its strict door-to-door segregated waste collection success?

A. Indore
B. Shimla
C. Patna
D. Guwahati

Correct Answer: Option (A)

Short Explanation:
Indore has been consistently ranked among India's cleanest cities, largely due to strict segregated waste collection practices.

Question 65

What is the recycling target for e-waste producers under the E-Waste (Management) Rules, 2022, for 2023-25?

A. 30%
B. 45%
C. 60%
D. 90%

Correct Answer: Option (C)

Short Explanation:
The E-Waste Rules, 2022 set an initial target of 60% recycling for producers in the 2023-25 period, rising in later phases.

Question 66

Which of these best describes 'bioremediation' in a waste management context?

A. Burning legacy landfill waste
B. Treating legacy landfill waste using biological processes
C. Building new landfills
D. Exporting waste abroad

Correct Answer: Option (B)

Short Explanation:
Bioremediation uses biological processes to treat and reduce accumulated waste at legacy landfill sites.

Question 67

A household hands over unsegregated waste to a collector daily. What is the most appropriate corrective action?

A. Continue as usual since it doesn't matter
B. Start segregating wet and dry waste before handover
C. Burn the waste instead
D. Dump it in a nearby drain

Correct Answer: Option (B)

Short Explanation:
Segregating waste before handover ensures downstream composting and recycling systems function effectively, as intended by law.

Question 68

Which colour is commonly associated with bins for wet/biodegradable waste in India's segregation convention?

A. Blue
B. Green
C. Black
D. Red

Correct Answer: Option (B)

Short Explanation:
Green bins are commonly used for wet, biodegradable waste under common Indian municipal conventions.

Question 69

What is the primary hazard associated with improperly disposed e-waste?

A. It attracts more recycling
B. It contains hazardous materials like lead and mercury that can contaminate soil and water
C. It has no environmental impact
D. It is entirely biodegradable

Correct Answer: Option (B)

Short Explanation:
E-waste contains hazardous heavy metals like lead and mercury, which can leach into soil and water if improperly discarded.

Question 70

Under the Solid Waste Management Rules, 2016, who is legally responsible for segregating waste at the household level?

A. Only municipal workers
B. Every individual waste generator, including households
C. Only industries
D. Only hospitals

Correct Answer: Option (B)

Short Explanation:
The Rules place legal responsibility for source segregation on every waste generator, including individual households.

Question 71

Which of the following would NOT typically go into a compost bin?

A. Vegetable peels
B. Dry leaves
C. Plastic wrapper
D. Fruit scraps

Correct Answer: Option (C)

Short Explanation:
Plastic wrappers are non-biodegradable and should never be added to a compost bin, unlike organic scraps and leaves.

Question 72

What does the term 'landfill' refer to?

A. A recycling centre
B. A designated site for the disposal of waste by burial
C. A composting facility
D. An e-waste shop

Correct Answer: Option (B)

Short Explanation:
A landfill is a designated site where waste is disposed of by burying it in the ground.

Question 73

Ambikapur's zero-waste model in Chhattisgarh is notable for which feature?

A. Fully automated robotic sorting
B. A women-led self-help group network managing door-to-door segregation
C. Complete reliance on landfilling
D. No waste collection system at all

Correct Answer: Option (B)

Short Explanation:
Ambikapur's model uses a women-led self-help group network to manage citywide segregation and material recovery, turning waste management into a livelihood programme.

Question 74

What is the main advantage of decentralised waste management models like Alappuzha's?

A. They require larger centralised landfills
B. They reduce waste transportation and landfill dependency through local composting and biogas units
C. They eliminate the need for any waste segregation
D. They only work in rural areas

Correct Answer: Option (B)

Short Explanation:
Decentralised models process waste closer to its source through household or community-level composting and biogas, reducing landfill dependency.

Question 75

Which of the following is a domestic hazardous waste item requiring special disposal?

A. Newspaper
B. Expired medicine
C. Banana peel
D. Cardboard box

Correct Answer: Option (B)

Short Explanation:
Expired medicines are classified as domestic hazardous waste and require special, careful disposal rather than regular trash.

Question 76

What does 'Extended Producer Responsibility' primarily aim to achieve?

A. Shift all waste responsibility to consumers
B. Hold producers accountable for the post-consumer life of their packaging or products
C. Eliminate the need for recycling
D. Reduce producer costs only

Correct Answer: Option (B)

Short Explanation:
EPR shifts a share of accountability to producers and brand owners for collecting and recycling the packaging or products they introduce into the market.

Question 77

Which law specifically regulates biomedical waste from healthcare facilities?

A. Bio-Medical Waste Management Rules, 2016
B. Plastic Waste Management Rules, 2016
C. E-Waste Rules, 2022
D. Air Act, 1981

Correct Answer: Option (A)

Short Explanation:
The Bio-Medical Waste Management Rules, 2016 regulate segregation, treatment, and disposal of waste generated by healthcare facilities.

Question 78

Why does mixing segregated waste after collection undermine the segregation effort?

A. It has no effect on recycling
B. It defeats the purpose, since composting and recycling depend on materials staying separated
C. It automatically improves recycling rates
D. It is legally required

Correct Answer: Option (B)

Short Explanation:
Once separated waste is remixed, it becomes far harder and more costly to sort again, undermining downstream composting and recycling systems.

Question 79

What is one key focus area of Swachh Bharat Mission's second phase (SBM 2.0)?

A. Eliminating all forms of taxation
B. Garbage-free cities and villages
C. Building new international airports
D. Reducing literacy rates

Correct Answer: Option (B)

Short Explanation:
SBM 2.0 focuses on achieving garbage-free status for cities and villages, building on the sanitation gains of the first phase.

Question 80

Which of the following best illustrates the principle of 'reduce' in the waste hierarchy?

A. Buying a reusable water bottle instead of single-use ones
B. Recycling a plastic bottle after use
C. Composting food waste
D. Donating old clothes

Correct Answer: Option (A)

Short Explanation:
Choosing a reusable bottle prevents the generation of single-use plastic waste altogether, embodying the 'reduce' principle.

Question 81

Approximately what percentage of India's e-waste is handled by the informal sector?

A. 10%
B. 30%
C. 60%
D. 90%

Correct Answer: Option (D)

Short Explanation:
An estimated 90% of India's e-waste is processed by the informal sector, often without adequate safety measures.

Question 82

What is the primary purpose of Construction and Demolition Waste Management Rules?

A. To ban all construction activity
B. To set recycling mandates for construction and demolition debris
C. To regulate only residential waste
D. To eliminate the need for building permits

Correct Answer: Option (B)

Short Explanation:
These rules establish recycling mandates specifically for debris generated from construction and demolition activities.

Question 83

Which action best reflects responsible disposal of household hazardous waste?

A. Throwing batteries in regular trash
B. Pouring old paint down the drain
C. Taking expired medicines to a designated collection point
D. Burning old electronics at home

Correct Answer: Option (C)

Short Explanation:
Taking expired medicines to designated collection points ensures they are handled safely rather than contaminating soil, water, or air.

Question 84

Why is open burning of garbage discouraged under India's waste management framework?

A. It has no environmental impact
B. It releases toxic pollutants into the air, harming public health
C. It reduces waste volume efficiently and safely
D. It is the most cost-effective disposal method

Correct Answer: Option (B)

Short Explanation:
Open burning releases harmful pollutants into the air, contributing to air pollution and health hazards, and is prohibited under most municipal rules.

Question 85

A resident wants to responsibly dispose of a large volume of cardboard packaging. What is the best approach?

A. Burn it in the backyard
B. Flatten and place it in the dry waste/recyclable stream
C. Throw it in a water body
D. Mix it with wet waste

Correct Answer: Option (B)

Short Explanation:
Cardboard is a recyclable dry waste material and should be flattened and placed with other recyclables for proper processing.

Question 86

Which of the following waste types requires the most specialised, regulated handling due to health risks?

A. Paper waste
B. Biomedical waste
C. Garden waste
D. Cardboard waste

Correct Answer: Option (B)

Short Explanation:
Biomedical waste, including used syringes and contaminated materials, poses direct health risks and requires specialised regulated handling.

Question 87

What does the 'reuse' principle in the waste hierarchy specifically involve?

A. Discarding an item after first use
B. Using an item again for its original or a new purpose before disposal
C. Immediately recycling every item
D. Avoiding all consumption

Correct Answer: Option (B)

Short Explanation:
Reuse means extending an item's life by using it again, either for its original purpose or a new one, before it becomes waste.

Question 88

Which of the following is an example of upcycling as part of a reuse strategy?

A. Throwing away a glass jar
B. Turning a glass jar into a storage container
C. Melting a glass jar for recycling
D. Burning a glass jar

Correct Answer: Option (B)

Short Explanation:
Turning a used glass jar into a storage container reuses the item creatively, extending its functional life without processing.

Question 89

What is the environmental consequence of untreated municipal solid waste accumulating in open dumps?

A. No measurable consequence
B. Groundwater contamination, methane emissions, and public health risks
C. Improved soil fertility
D. Reduced air pollution

Correct Answer: Option (B)

Short Explanation:
Untreated waste in open dumps can contaminate groundwater, emit methane (a potent greenhouse gas), and pose serious public health risks.

Question 90

Why are multi-layered plastics particularly difficult to manage in India's waste stream?

A. They are the easiest plastics to recycle
B. Their mixed material composition makes them difficult and often uneconomical to recycle
C. They are always biodegradable
D. They are banned entirely already

Correct Answer: Option (B)

Short Explanation:
Multi-layered plastics combine different materials that are difficult to separate, making them challenging and costly to recycle economically.

Question 91

What is one benefit of composting kitchen waste at the household level?

A. It increases landfill volume
B. It reduces landfill waste and produces free fertiliser for plants
C. It has no environmental benefit
D. It increases methane emissions significantly

Correct Answer: Option (B)

Short Explanation:
Home composting diverts organic waste from landfills, reduces methane emissions, and produces nutrient-rich fertiliser for household use.

Question 92

Which government scheme is specifically focused on eliminating open defecation and improving rural sanitation infrastructure?

A. Jal Jeevan Mission
B. Swachh Bharat Mission (Gramin)
C. PM Surya Ghar
D. Namami Gange

Correct Answer: Option (B)

Short Explanation:
Swachh Bharat Mission (Gramin) focuses on rural sanitation, including eliminating open defecation and improving solid and liquid waste management.

Question 93

Which best describes why segregating hazardous waste separately is important?

A. Hazardous waste has no different properties than regular waste
B. It requires specific handling to prevent contamination and health risks
C. It reduces its volume automatically
D. It is always biodegradable

Correct Answer: Option (B)

Short Explanation:
Hazardous waste like batteries and chemicals requires separate, careful handling to prevent contamination of soil, water, and health risks to handlers.

Question 94

What role do Resident Welfare Associations (RWAs) often play in urban waste management?

A. No role at all
B. Coordinating segregated door-to-door collection with municipal authorities
C. Setting national waste policy
D. Replacing the need for municipal services entirely

Correct Answer: Option (B)

Short Explanation:
RWAs often coordinate practical, community-level waste segregation and collection efforts alongside municipal authorities.

Question 95

Why is 'recycling' considered the last step, not the first, in the waste hierarchy?

A. Because recycling is not effective
B. Because reducing and reusing prevent waste before it is created, which is more effective than processing it afterward
C. Because recycling should always come first
D. Because recycling has no environmental benefit

Correct Answer: Option (B)

Short Explanation:
Reducing and reusing prevent waste generation altogether, making them more effective strategies than recycling waste after it has already been created.

Question 96

What is a common mistake households make regarding e-waste disposal?

A. Taking it to authorised collectors
B. Mixing it with regular household trash
C. Storing it for eventual proper disposal
D. Donating working electronics

Correct Answer: Option (B)

Short Explanation:
A common and harmful mistake is discarding e-waste with regular trash instead of routing it to authorised, specialised collection channels.

Question 97

Which of these best reflects a systemic solution to India's growing e-waste problem?

A. Ignoring the informal recycling sector entirely

B. Formalising and supporting safe e-waste collection and recycling infrastructure

C. Banning all electronic devices

D. Exporting all e-waste abroad

Correct Answer: Option (B)

Short Explanation:

Strengthening formal, safe collection and recycling infrastructure addresses e-waste more sustainably than relying on the unregulated informal sector.

Question 98

What is the primary purpose of the Plastic Waste Management Rules' EPR targets for producers?

A. To increase plastic production

B. To ensure producers take responsibility for collecting and recycling a share of the plastic they introduce into the market

C. To eliminate all plastic use immediately

D. To transfer full responsibility to consumers

Correct Answer: Option (B)

Short Explanation:

EPR targets require producers to collect and recycle a defined share of the plastic packaging they place in the market, driving accountability upstream.

Question 99

Which statement best reflects the relationship between waste segregation and public health?

A. Segregation has no bearing on public health

B. Proper segregation reduces contamination risks and supports safer waste handling, improving public health outcomes

C. Segregation only benefits recycling companies

D. Public health is unrelated to waste management

Correct Answer: Option (B)

Short Explanation:

Effective segregation reduces contamination and handling risks, directly contributing to safer sanitation and better public health outcomes.

Question 100

A citizen sees a neighbour burning dry leaves and plastic waste regularly in an open lot. What is the most appropriate response?

A. Ignore it, as it is not a serious issue

B. Raise the concern directly if safe, and report it to municipal authorities if it continues

C. Join in the burning

D. Do nothing since it is a private matter

Correct Answer: Option (B)

Short Explanation:

Open burning is both an environmental violation and a health hazard; raising the concern and reporting it are the appropriate civic responses.

Question 101

What are the four main stages of the water cycle?

A. Evaporation, Condensation, Precipitation, Collection

B. Filtration, Storage, Distribution, Consumption

C. Extraction, Treatment, Supply, Disposal

D. Rainfall, Flooding, Drought, Recovery

Correct Answer: Option (A)

Short Explanation:

The water cycle consists of evaporation, condensation, precipitation, and collection, continuously recycling water between atmosphere, land, and oceans.

Question 102

What is 'water stress' defined as?

A. Annual per capita water availability below 1,700 cubic metres

B. Any rainfall below average

C. A one-time drought event

D. Water pollution exceeding safety limits

Correct Answer: Option (A)

Short Explanation:

Water stress is defined internationally as annual per capita water availability falling below 1,700 cubic metres.

Question 103

What is 'water scarcity' defined as?

A. Annual per capita water availability below 1,000 cubic metres

B. Any reduction in rainfall

C. Water stress exceeding 5,000 cubic metres

D. A temporary supply interruption

Correct Answer: Option (A)

Short Explanation:

Water scarcity is a more severe condition than water stress, defined as annual per capita availability below 1,000 cubic metres.

Question 104

Approximately what was India's average per capita water availability in 2024, according to the Central Water Commission?

A. About 800 cubic metres
B. About 1,513 cubic metres
C. About 3,000 cubic metres
D. About 5,000 cubic metres

Correct Answer: Option (B)

Short Explanation:
The CWC recorded India's average per capita water availability at approximately 1,513 cubic metres in 2024, below the water-stress threshold.

Question 105

What is rainwater harvesting primarily used for?

A. Increasing rainfall
B. Collecting and storing rainwater for later use or groundwater recharge
C. Preventing all flooding permanently
D. Producing electricity

Correct Answer: Option (B)

Short Explanation:
Rainwater harvesting collects rainwater through rooftop systems or recharge pits, either for direct use or to replenish groundwater.

Question 106

What is an 'aquifer'?

A. A type of water treatment plant
B. An underground layer of rock or sediment that stores and transmits groundwater
C. A surface river
D. A type of rain gauge

Correct Answer: Option (B)

Short Explanation:
An aquifer is an underground geological layer capable of storing and transmitting groundwater.

Question 107

Which mission aims to provide functional tap water connections to every rural household in India?

A. Namami Gange
B. Jal Jeevan Mission
C. Atal Bhujal Yojana
D. Swachh Bharat Mission

Correct Answer: Option (B)

Short Explanation:
The Jal Jeevan Mission, launched in 2019, aims to provide 'Har Ghar Jal' — functional tap water to every rural household.

Question 108

As of October 2025, approximately what share of rural Indian households had tap water connections under the Jal Jeevan Mission?

A. Around 30%
B. Around 55%
C. Over 81%
D. 100%

Correct Answer: Option (C)

Short Explanation:
Over 81% of rural households — more than 15.72 crore — had gained tap water connections as of October 2025.

Question 109

What is the minimum service level target under the Jal Jeevan Mission?

A. 25 litres per capita per day
B. 55 litres per capita per day
C. 100 litres per capita per day
D. 200 litres per capita per day

Correct Answer: Option (B)

Short Explanation:
The Jal Jeevan Mission targets a minimum service level of 55 litres per capita per day for rural households.

Question 110

Which programme focuses specifically on cleaning and rejuvenating the river Ganga?

A. Atal Bhujal Yojana
B. Namami Gange
C. Jal Jeevan Mission
D. Mission Amrit Sarovar

Correct Answer: Option (B)

Short Explanation:
Namami Gange is a mission-mode programme dedicated to cleaning, conserving, and rejuvenating the river Ganga.

Question 111

What does the Atal Bhujal Yojana specifically focus on?

A. Urban air quality
B. Community-led sustainable groundwater management
C. River pollution alone
D. Coastal erosion control

Correct Answer: Option (B)

Short Explanation:
Atal Bhujal Yojana is a community-led scheme for sustainable groundwater management in water-stressed areas.

Question 112

Which law regulates the discharge of pollutants into Indian water bodies?

A. Air Act, 1981
B. Water (Prevention & Control of Pollution) Act, 1974
C. Wildlife Protection Act, 1972
D. Forest Act, 1980

Correct Answer: Option (B)

Short Explanation:
The Water (Prevention & Control of Pollution) Act, 1974 regulates pollutant discharge into water bodies and established pollution control boards.

Question 113

What is 'greywater'?

A. Water contaminated with sewage
B. Gently used household water from sinks or showers that can be reused for non-drinking purposes
C. Ocean water
D. Rainwater collected directly

Correct Answer: Option (B)

Short Explanation:
Greywater refers to lightly used household water, such as from sinks or laundry, that can be safely reused for purposes like cleaning or irrigation.

Question 114

Which body conducts India's national groundwater resource assessment?

A. Central Ground Water Board (CGWB)
B. Central Pollution Control Board
C. Forest Survey of India
D. NDMA

Correct Answer: Option (A)

Short Explanation:
The Central Ground Water Board conducts the Dynamic Ground Water Resource Assessment, tracking national groundwater extraction and recharge.

Question 115

Approximately what share of India's annual groundwater recharge is currently being extracted nationally?

A. About 20%
B. About 40%
C. About 60%
D. About 95%

Correct Answer: Option (C)

Short Explanation:
National groundwater extraction stands at roughly 60% of annual recharge, with several regions extracting well beyond sustainable limits.

Question 116

What percentage of global freshwater resources does India hold, despite supporting about 18% of the world's population?

A. About 1%
B. About 4%
C. About 15%
D. About 25%

Correct Answer: Option (B)

Short Explanation:
India holds about 4% of the world's freshwater resources while supporting nearly 18% of the global population, creating significant water stress.

Question 117

What is a 'check dam' used for in water conservation?

A. Generating hydroelectric power only
B. Slowing water flow across a drainage channel to aid groundwater recharge
C. Blocking rivers permanently
D. Producing drinking water directly

Correct Answer: Option (B)

Short Explanation:
A check dam is a small structure built across a drainage channel to slow water flow and encourage groundwater recharge.

Question 118

Why does most of India's rainfall pose a storage challenge?

A. India receives very little annual rainfall
B. About 80% of rainfall occurs during the four monsoon months, requiring storage for the rest of the year
C. Rainfall is evenly distributed throughout the year
D. India has excess storage capacity already

Correct Answer: Option (B)

Short Explanation:
Since roughly 80% of India's rainfall occurs in the four monsoon months, inadequate storage infrastructure causes much of it to run off unused.

Question 119

Which of these is the most effective first step to reduce household water wastage?

A. Ignoring small leaks
B. Fixing leaking taps and pipes promptly
C. Increasing water pressure
D. Avoiding water audits

Correct Answer: Option (B)

Short Explanation:
Fixing leaks promptly is one of the simplest and most effective ways to prevent significant water wastage over time.

Question 120

What is Mission Amrit Sarovar's primary objective?

A. Building new highways
B. Developing or rejuvenating at least 75 water bodies in every district
C. Reducing air pollution
D. Expanding electricity access

Correct Answer: Option (B)

Short Explanation:
Mission Amrit Sarovar, launched in 2022, aims to develop or rejuvenate at least 75 water bodies in every district as a lasting conservation legacy.

Question 121

A housing society plans a new building without considering rainwater harvesting. What should a concerned resident do?

A. Ignore the issue entirely
B. Raise it during the planning stage, since many states legally require rainwater harvesting structures
C. Wait until construction is complete
D. Assume it's not their responsibility

Correct Answer: Option (B)

Short Explanation:
Raising the issue during planning is appropriate, as many state municipal byelaws legally mandate rainwater harvesting structures for larger plots.

Question 122

What is the primary cause of groundwater depletion in many Indian regions?

A. Excessive rainfall
B. Extraction exceeding natural recharge rates, especially for irrigation
C. Too much surface water storage
D. Overuse of desalination plants

Correct Answer: Option (B)

Short Explanation:
Groundwater is often extracted for irrigation and other uses faster than it can naturally recharge, leading to depletion in many regions.

Question 123

Which of the following best explains why deforestation affects the water cycle?

A. Deforestation increases rainfall directly
B. Trees help regulate evaporation and groundwater recharge; their loss disrupts these processes
C. Deforestation has no effect on water cycles
D. Trees prevent all forms of precipitation

Correct Answer: Option (B)

Short Explanation:
Trees play a key role in regulating evaporation, transpiration, and groundwater recharge; their removal disrupts these natural processes.

Question 124

What government mandate requires cities to recycle a minimum share of consumed water, per the Ministry of Jal Shakti?

A. At least 5%
B. At least 20%
C. At least 50%
D. At least 90%

Correct Answer: Option (B)

Short Explanation:
The Ministry of Jal Shakti mandates that cities recycle and reuse at least 20% of consumed water.

Question 125

Which of the following would most directly help prevent industrial water pollution?

A. Allowing unrestricted effluent discharge
B. Treating and recycling wastewater before discharge, per pollution control regulations
C. Increasing industrial water withdrawal
D. Ignoring compliance requirements

Correct Answer: Option (B)

Short Explanation:
Treating and recycling wastewater before discharge, as required by pollution control regulations, directly reduces industrial water pollution.

Question 126

What is the 'water table'?

A. The upper level of underground water in the soil
B. A type of water storage tank
C. A measurement of rainfall intensity
D. A water quality certification

Correct Answer: Option (A)

Short Explanation:
The water table refers to the upper level of the saturated zone of groundwater within the soil.

Question 127

Why is river conservation considered important beyond just drinking water supply?

A. Rivers have no other function
B. Rivers support biodiversity, irrigation, flood regulation, and cultural significance
C. Rivers are only relevant to fishing communities
D. Rivers have no connection to groundwater

Correct Answer: Option (B)

Short Explanation:
Rivers provide multiple interconnected benefits including biodiversity support, irrigation, flood regulation, and cultural value beyond drinking water.

Question 128

Which is the most water-efficient household practice among the following?

A. Using a hose to wash a vehicle
B. Using a bucket to wash a vehicle
C. Leaving the tap running while washing
D. Using a hose continuously for gardening

Correct Answer: Option (B)

Short Explanation:
Using a bucket instead of a continuously running hose significantly reduces water consumption during vehicle washing.

Question 129

What role does the Central Water Commission (CWC) play in India's water governance?

A. It only manages waste disposal
B. It is India's premier technical body for water resources planning, assessment, and management
C. It regulates air quality
D. It manages wildlife sanctuaries

Correct Answer: Option (B)

Short Explanation:
The CWC is India's leading technical authority on water resources planning, publishing periodic national water availability assessments.

Question 130

Why is water constitutionally treated differently from many other resources in India's governance structure?

A. It is not regulated at all
B. Water is primarily a State subject, with States responsible for planning and implementing supply schemes
C. It is managed exclusively by international bodies
D. There is no formal water governance structure

Correct Answer: Option (B)

Short Explanation:
Water is constitutionally a State subject in India, meaning states plan and implement water supply schemes, while the Centre provides technical and financial support.

Question 131

A slow but steady dripping tap left unrepaired for a year can waste approximately how much water?

A. A negligible amount
B. Thousands of litres
C. Only a few litres
D. No measurable amount

Correct Answer: Option (B)

Short Explanation:
Even a slow, steady drip can accumulate to thousands of litres of wasted water over the course of a year.

Question 132

What is the most effective time of day to water garden plants to minimise evaporation loss?

A. Midday, under direct sun
B. Early morning or evening
C. Only during rainfall
D. It does not matter

Correct Answer: Option (B)

Short Explanation:
Watering plants in the early morning or evening reduces water loss to evaporation, which is highest during peak daytime heat.

Question 133

Which of the following best describes an 'effluent'?

A. Clean drinking water
B. Liquid waste or sewage discharged into a water body
C. A type of rain gauge
D. A groundwater recharge structure

Correct Answer: Option (B)

Short Explanation:
Effluent refers to liquid waste or sewage, often industrial or municipal, discharged into a water body, typically after treatment.

Question 134

How does urbanisation typically affect a region's natural water recharge capacity?

A. It has no effect
B. Concretisation seals natural recharge zones, reducing groundwater replenishment
C. It always improves recharge rates
D. It eliminates the need for rainwater harvesting

Correct Answer: Option (B)

Short Explanation:
Urban concretisation covers natural ground surfaces, reducing the land's ability to absorb rainwater and recharge groundwater.

Question 135

Which of the following industries is typically a major consumer of water for cooling and processing?

A. Software development
B. Manufacturing and heavy industry
C. Graphic design
D. Online retail

Correct Answer: Option (B)

Short Explanation:
Manufacturing and heavy industry typically require large volumes of water for cooling and processing operations.

Question 136

What is the main purpose of a 'first-flush diverter' in a rainwater harvesting system?

A. To increase rainfall
B. To divert the initial, dirtiest flow of water away from the storage system
C. To generate electricity
D. To purify all water permanently

Correct Answer: Option (B)

Short Explanation:
A first-flush diverter redirects the initial, most contaminated flow of rainwater away from storage, improving overall water quality.

Question 137

Which of the following would be the most appropriate action if a public water pipeline is found leaking?

A. Ignore it and assume someone else will report it
B. Note the location and report it to the municipal water department
C. Try to fix it yourself without authorisation
D. Take no action, as it's not a serious issue

Correct Answer: Option (B)

Short Explanation:
Reporting a public leak to the relevant municipal authority ensures it is addressed promptly, preventing significant water wastage.

Question 138

What is one advantage of check dams and farm ponds for farmers in water-stressed regions?

A. They increase soil salinity
B. They capture monsoon runoff for later agricultural use
C. They eliminate the need for any irrigation
D. They have no effect on water availability

Correct Answer: Option (B)

Short Explanation:
Check dams and farm ponds capture monsoon runoff, providing farmers with a buffered water source during drier periods.

Question 139

Why might drip irrigation be preferred over flood irrigation in water-stressed agricultural regions?

A. Drip irrigation wastes more water
B. Drip irrigation delivers water directly to plant roots, reducing wastage compared to flooding fields
C. Flood irrigation is always more efficient
D. There is no difference between the two methods

Correct Answer: Option (B)

Short Explanation:
Drip irrigation targets water directly at plant roots, significantly reducing water loss compared to broadly flooding fields.

Question 140

What does the Water Act, 1974 empower state governments to establish?

A. National parks
B. State Pollution Control Boards
C. Municipal corporations
D. Disaster management authorities

Correct Answer: Option (B)

Short Explanation:
The Water Act, 1974 established the framework for State Pollution Control Boards to regulate water pollution at the state level.

Question 141

Which of the following actions best supports groundwater recharge at the community level?

A. Concreting all open land
B. Constructing check dams and recharge wells
C. Draining wetlands for construction
D. Increasing groundwater extraction rates

Correct Answer: Option (B)

Short Explanation:
Community-level structures like check dams and recharge wells actively support the replenishment of local groundwater reserves.

Question 142

What is the projected trend for India's per capita water availability by 2031, according to CWC estimates?

A. It will rise significantly
B. It will decline further to around 1,367 cubic metres
C. It will remain unchanged
D. It will double

Correct Answer: Option (B)

Short Explanation:
CWC projections estimate India's per capita water availability will decline further to around 1,367 cubic metres by 2031, absent major intervention.

Question 143

Which of the following is an appropriate way to reuse RO (reverse osmosis) reject water at home?

A. Pour it down the drain
B. Use it for cleaning floors or watering plants
C. Drink it directly
D. Store it indefinitely without use

Correct Answer: Option (B)

Short Explanation:
RO reject water, while not suitable for drinking, can be safely reused for cleaning or watering plants, reducing overall household water waste.

Question 144

Why is industrial wastewater treatment before discharge legally mandated in India?

A. To increase industrial costs unnecessarily

B. To prevent pollutants from contaminating water bodies and harming public health and ecosystems

C. Treatment has no environmental benefit

D. It is not actually required by law

Correct Answer: Option (B)

Short Explanation:

Mandatory treatment prevents harmful industrial pollutants from contaminating rivers, lakes, and groundwater, protecting both ecosystems and public health.

Question 145

What is one reason river floodplains should generally not be built upon?

A. Floodplains have no ecological function

B. Floodplains naturally regulate flooding and support biodiversity; building on them increases flood risk for surrounding areas

C. Floodplains are always dry and unused

D. Construction on floodplains has no consequences

Correct Answer: Option (B)

Short Explanation:

Floodplains naturally absorb excess water during heavy rainfall; building on them removes this buffer, increasing flood risk elsewhere.

Question 146

A community wants to reduce dependence on over-extracted groundwater. Which combined strategy would be most effective?

A. Ignoring the issue entirely

B. Rainwater harvesting, recharge structures, and regulated extraction together

C. Increasing extraction further

D. Relying solely on imported water

Correct Answer: Option (B)

Short Explanation:

A combined approach of harvesting, recharge, and regulated extraction addresses both supply and demand sides of groundwater sustainability.

Question 147

What is the primary reason India's water challenge is often described as a 'storage and distribution' problem rather than a 'total quantity' problem?

A. India receives virtually no rainfall

B. Despite substantial monsoon rainfall, inadequate storage and recharge infrastructure causes much of it to go unused

C. India has more water than any other country

D. Distribution has no impact on availability

Correct Answer: Option (B)

Short Explanation:

India receives substantial monsoon rainfall, but insufficient storage and recharge infrastructure means much of it runs off unused rather than being captured.

Question 148

Which everyday habit most directly reduces water waste during dishwashing?

A. Running the tap continuously while washing each dish

B. Using a basin to soak and wash dishes before rinsing

C. Ignoring water flow entirely

D. Washing dishes multiple times unnecessarily

Correct Answer: Option (B)

Short Explanation:

Using a basin to soak and wash dishes before a final rinse conserves significantly more water than a continuously running tap.

Question 149

Why do many state governments legally require rainwater harvesting structures in new buildings?

A. To increase construction costs without benefit

B. To reduce dependency on groundwater and support recharge as urban development expands

C. Because it is culturally traditional only

D. Because it has no practical water benefit

Correct Answer: Option (B)

Short Explanation:

Mandating rainwater harvesting in new construction helps offset the loss of natural recharge capacity caused by urban development.

Question 150

What is the most appropriate first response upon discovering water pollution from a suspected industrial source nearby?

A. Use the water immediately
B. Avoid contact, document details safely, and report it to the State Pollution Control Board
C. Ignore it since it is not your responsibility
D. Confront the factory directly without authorities

Correct Answer: Option (B)

Short Explanation:
Avoiding contact and reporting the issue to the relevant Pollution Control Board ensures a safe, appropriate, and effective response.

Question 151

What does PM2.5 refer to?

A. A pollution measuring device
B. Fine particulate matter with a diameter of 2.5 micrometres or smaller
C. A type of greenhouse gas
D. An air quality mobile app

Correct Answer: Option (B)

Short Explanation:
PM2.5 refers to fine particulate matter 2.5 micrometres or smaller, small enough to penetrate deep into the lungs and bloodstream.

Question 152

What does AQI stand for?

A. Air Quality Index
B. Atmospheric Quality Instrument
C. Annual Quality Inspection
D. Air Quantity Indicator

Correct Answer: Option (A)

Short Explanation:
AQI stands for Air Quality Index, a standardised scale communicating pollution levels and associated health risk.

Question 153

Which AQI category indicates 'breathing discomfort for most people on prolonged exposure'?

A. Good (0-50)
B. Satisfactory (51-100)
C. Poor (201-300)
D. Severe (401-500)

Correct Answer: Option (C)

Short Explanation:
The 'Poor' category (AQI 201-300) indicates breathing discomfort for most people upon prolonged exposure.

Question 154

Which of the following is a major source of outdoor air pollution in Indian cities?

A. Indoor cooking only
B. Vehicle emissions and industrial exhaust
C. Ocean currents
D. Underground water flow

Correct Answer: Option (B)

Short Explanation:
Vehicle emissions and industrial exhaust are among the most significant contributors to outdoor air pollution in Indian cities.

Question 155

What is a common cause of severe winter air pollution in northern India?

A. Excessive summer heat
B. Stubble burning combined with vehicle emissions and stagnant winter weather
C. Ocean pollution
D. Volcanic activity

Correct Answer: Option (B)

Short Explanation:
Stubble burning, combined with vehicle and industrial emissions and stagnant winter weather, traps pollutants near the ground, worsening air quality.

Question 156

What is the National Clean Air Programme's core reduction target for PM10?

A. 10% reduction
B. 20% reduction only
C. 40% reduction (or meeting NAAQS) by 2025-26
D. No specific target

Correct Answer: Option (C)

Short Explanation:
NCAP targets a 40% reduction in PM10 levels, or meeting the national standard, across 130 non-attainment cities by 2025-26.

Question 157

What is a 'non-attainment city' under India's air quality framework?

A. A city with no pollution monitoring
B. A city that has consistently failed to meet NAAQS over five years
C. A city with perfect air quality
D. A city exempt from all regulations

Correct Answer: Option (B)

Short Explanation:
A non-attainment city is one that has consistently failed to meet National Ambient Air Quality Standards over five consecutive years.

Question 158

Which body coordinates the Graded Response Action Plan (GRAP) for Delhi-NCR?

A. NDMA
B. Commission for Air Quality Management (CAQM)
C. Ministry of Home Affairs
D. NTCA

Correct Answer: Option (B)

Short Explanation:
The Commission for Air Quality Management (CAQM) coordinates GRAP, a staged emergency response system for Delhi-NCR air pollution.

Question 159

Approximately how many cities exceeded the annual PM10 standard in India in 2025?

A. 50 of 229
B. 100 of 229
C. 190 of 229
D. All 229

Correct Answer: Option (C)

Short Explanation:
In 2025, 190 out of 229 monitored Indian cities exceeded the national annual PM10 standard.

Question 160

Which pollutant type includes carbon monoxide, sulfur dioxide, and nitrogen oxides?

A. Particulate matter
B. Gaseous pollutants
C. Volatile organic compounds only
D. Ground-level ozone only

Correct Answer: Option (B)

Short Explanation:
Carbon monoxide, sulfur dioxide, and nitrogen oxides are classified as gaseous pollutants.

Question 161

What is ground-level ozone primarily formed by?

A. Direct industrial emission only
B. A reaction of sunlight with other pollutants in the atmosphere
C. Ocean evaporation
D. Groundwater contamination

Correct Answer: Option (B)

Short Explanation:
Ground-level ozone forms through a chemical reaction between sunlight and other pollutants already present in the air.

Question 162

Which of the following can make indoor air more polluted than outdoor air?

A. Good ventilation
B. Cooking with solid fuels in poorly ventilated spaces
C. Using air purifiers
D. Opening windows regularly

Correct Answer: Option (B)

Short Explanation:
Cooking with solid fuels in poorly ventilated indoor spaces can significantly elevate indoor air pollution, sometimes beyond outdoor levels.

Question 163

What Bharat Stage (BS) emission norms regulate?

A. Industrial water discharge
B. Permissible vehicle exhaust emissions
C. Noise pollution levels
D. Plastic waste production

Correct Answer: Option (B)

Short Explanation:
Bharat Stage emission norms regulate the permissible levels of pollutants in vehicle exhaust, aligned with international standards.

Question 164

Which health effects are commonly associated with prolonged PM2.5 exposure?

A. Improved lung function
B. Respiratory and cardiovascular diseases
C. No measurable health effects
D. Enhanced immunity

Correct Answer: Option (B)

Short Explanation:
Prolonged PM2.5 exposure is linked to respiratory diseases, cardiovascular problems, and reduced lung function.

Question 165

Which population groups are considered most vulnerable to air pollution health effects?

A. Only healthy young adults
B. Children, the elderly, and those with pre-existing conditions
C. Only athletes
D. No group is more vulnerable than another

Correct Answer: Option (B)

Short Explanation:
Children, the elderly, and individuals with pre-existing health conditions are considered most vulnerable to air pollution's health impacts.

Question 166

What is the primary function of the CPCB regarding air quality?

A. Managing wildlife reserves
B. Setting and enforcing National Ambient Air Quality Standards and monitoring air quality
C. Regulating water supply only
D. Managing forest cover

Correct Answer: Option (B)

Short Explanation:
The Central Pollution Control Board sets and enforces NAAQS and operates India's national air quality monitoring network.

Question 167

What does the PRANA portal track?

A. Wildlife populations
B. City-wise clean air action plans and fund utilisation under NCAP
C. Water quality only
D. Forest cover changes

Correct Answer: Option (B)

Short Explanation:
PRANA (Portal for Regulation of Air-pollution in Non-Attainment cities) tracks clean air action plans and fund utilisation transparently.

Question 168

Approximately how many air quality monitoring stations did India operate as of 2025?

A. About 100
B. About 500
C. Over 1,600
D. Over 10,000

Correct Answer: Option (C)

Short Explanation:
India's air quality monitoring network expanded to over 1,600 stations (CAAQMS and manual) across 584 cities by 2025.

Question 169

Which of the following is the most appropriate personal action on a day with 'Very Poor' AQI?

A. Engage in intense outdoor exercise
B. Limit outdoor activity and wear an N95 mask if going outside
C. Open all windows fully
D. Ignore the AQI reading

Correct Answer: Option (B)

Short Explanation:
On Very Poor AQI days, limiting outdoor exposure and using an N95 mask when necessary are appropriate protective actions.

Question 170

What legal framework primarily governs air pollution control in India?

A. Wildlife Protection Act, 1972
B. Air (Prevention & Control of Pollution) Act, 1981
C. Forest Conservation Act, 1980
D. Biological Diversity Act, 2002

Correct Answer: Option (B)

Short Explanation:
The Air (Prevention & Control of Pollution) Act, 1981 establishes India's air quality standards and enforcement framework.

Question 171

What triggers specific restrictions under the Graded Response Action Plan (GRAP)?

A. Random scheduling
B. AQI crossing defined thresholds
C. Only seasonal changes
D. Court orders exclusively

Correct Answer: Option (B)

Short Explanation:
GRAP measures are automatically triggered as AQI crosses specific pre-defined thresholds in the Delhi-NCR region.

Question 172

Which of these is a valid strategy to reduce urban air pollution over time?

A. Increasing private vehicle usage
B. Expanding urban green cover and promoting public transport
C. Removing air quality monitoring
D. Ignoring construction dust regulations

Correct Answer: Option (B)

Short Explanation:
Expanding green cover and promoting public transport are established, effective strategies for gradually reducing urban air pollution.

Question 173

What does 'source apportionment' refer to in air quality management?

A. A type of air purifier
B. A scientific study identifying which sources contribute how much to a city's pollution
C. A government subsidy scheme
D. A type of vehicle emission test

Correct Answer: Option (B)

Short Explanation:
Source apportionment studies determine the relative contribution of different pollution sources — such as vehicles, industry, or dust — to a city's air quality.

Question 174

A construction site generates visible dust without any dust suppression measures. What is the appropriate citizen response?

A. Ignore it completely
B. Report it to the local municipal authority or pollution control board
C. Confront workers directly and aggressively
D. Assume it's not a regulated issue

Correct Answer: Option (B)

Short Explanation:
Uncontrolled construction dust is a regulatory violation; reporting it to the relevant authority can prompt corrective dust-suppression measures.

Question 175

Which of the following most directly worsens air quality during Delhi's winter season?

A. Increased summer temperatures
B. Stubble burning combined with stagnant, cool winter air trapping pollutants
C. Excessive monsoon rainfall
D. Reduced vehicle traffic

Correct Answer: Option (B)

Short Explanation:
Stubble burning combines with stagnant winter weather conditions to trap pollutants close to the ground, sharply worsening air quality.

Question 176

What is one key difference between PM2.5 and PM10 in terms of health impact?

A. PM10 penetrates more deeply into the lungs than PM2.5
B. PM2.5 can penetrate more deeply into the lungs and bloodstream than the coarser PM10
C. They have identical health impacts
D. Neither has any health impact

Correct Answer: Option (B)

Short Explanation:
PM2.5 particles are smaller and can penetrate deeper into the lungs and even the bloodstream, generally posing greater health risks than PM10.

Question 177

Which of the following would most effectively reduce a household's personal contribution to air pollution?

A. Regularly maintaining vehicles and choosing public transport for short trips
B. Burning garden waste regularly
C. Avoiding vehicle servicing
D. Increasing daily private vehicle use

Correct Answer: Option (A)

Short Explanation:
Regular vehicle maintenance and choosing greener transport options directly reduce a household's contribution to vehicular air pollution.

Question 178

What health condition is a well-known long-term risk from chronic exposure to high AQI levels?

A. Improved cardiovascular health
B. Chronic respiratory illness such as bronchitis or asthma
C. No long-term health risk exists
D. Enhanced athletic performance

Correct Answer: Option (B)

Short Explanation:
Chronic exposure to high pollution levels is a well-documented risk factor for long-term respiratory conditions like bronchitis and asthma.

Question 179

Why might indoor plants and air purifiers be recommended on high-pollution days?

A. They eliminate all outdoor pollution instantly
B. They can help improve indoor air quality when outdoor air quality is poor
C. They have no impact on air quality
D. They increase indoor pollution

Correct Answer: Option (B)

Short Explanation:
Indoor plants and air purifiers can help improve indoor air quality, offering some protective benefit when outdoor air quality is poor.

Question 180

Which of the following best reflects why 'checking AQI before outdoor activity' is emphasised as a best practice?

A. AQI has no relevance to health decisions
B. It allows individuals to make informed, safer choices about outdoor exposure
C. AQI only matters for athletes
D. It is purely a formality with no practical use

Correct Answer: Option (B)

Short Explanation:
Checking AQI helps individuals, especially sensitive groups, make informed decisions about the safety of outdoor activity on a given day.

Question 181

What is the primary reason NCAP targets are set for specific 'non-attainment cities' rather than uniformly nationwide?

A. To ignore pollution in smaller towns
B. To focus resources on cities that have persistently failed to meet air quality standards
C. Because pollution only occurs in these cities
D. Because these cities have the cleanest air already

Correct Answer: Option (B)

Short Explanation:
Non-attainment cities are prioritised because they have consistently failed to meet air quality standards, requiring focused intervention.

Question 182

Which of the following industries is commonly associated with significant gaseous pollutant emissions?

A. Organic farming
B. Coal-based power generation
C. Handicraft weaving
D. Book publishing

Correct Answer: Option (B)

Short Explanation:
Coal-based power generation is a major source of gaseous pollutants such as sulfur dioxide and nitrogen oxides.

Question 183

What is one reason construction dust control measures, like water spraying, are legally required at sites?

A. To increase construction time unnecessarily
B. To reduce particulate matter released into the surrounding air
C. Dust has no health impact
D. It is purely aesthetic

Correct Answer: Option (B)

Short Explanation:
Dust suppression measures like water spraying reduce the release of particulate matter into surrounding air, protecting public health.

Question 184

Which of the following actions is NOT an effective way to reduce vehicular air pollution?

A. Regular vehicle servicing
B. Choosing carpooling for daily commutes
C. Idling the engine unnecessarily in traffic
D. Using public transport when possible

Correct Answer: Option (C)

Short Explanation:
Unnecessary engine idling wastes fuel and increases emissions without any transportation benefit, making it counterproductive.

Question 185

What does the Commission for Air Quality Management (CAQM) primarily oversee?

A. Wildlife conservation in national parks
B. Coordinated air quality management across Delhi and the National Capital Region
C. Water quality standards nationwide
D. Renewable energy targets

Correct Answer: Option (B)

Short Explanation:
The CAQM is a statutory body specifically coordinating air quality management, including GRAP, across Delhi-NCR.

Question 186

Why is it inaccurate to assume that air pollution is only a winter problem in India?

A. Air quality is always perfect year-round
B. Many Indian cities exceed safe air quality standards for a significant part of the year, not just winter
C. Winter is the only season with air pollution
D. Summer always has the worst air quality

Correct Answer: Option (B)

Short Explanation:
While winter often sees pollution spikes, many Indian cities exceed safe air quality thresholds across multiple seasons, not winter alone.

Question 187

What is the health rationale behind avoiding outdoor exercise on 'Poor' or worse AQI days?

A. Exercise has no interaction with air quality
B. Increased breathing rate during exercise raises exposure to harmful pollutants
C. Exercise always improves air quality
D. AQI only affects sedentary individuals

Correct Answer: Option (B)

Short Explanation:
Exercise increases breathing rate and volume, which raises the amount of polluted air inhaled, increasing health risk on poor AQI days.

Question 188

Which of the following is an example of a Volatile Organic Compound (VOC) source?

A. Fresh vegetables
B. Paints and solvents
C. Clean drinking water
D. Sunlight

Correct Answer: Option (B)

Short Explanation:
Paints and solvents are common sources of Volatile Organic Compounds, which contribute to air pollution and can also form ground-level ozone.

Question 189

What is the significance of India's expansion to over 1,600 air quality monitoring stations by 2025?

A. It has no practical significance
B. It gives more cities real-time visibility into their own air quality for better-informed action
C. It automatically eliminates all pollution
D. It replaces the need for any pollution control policy

Correct Answer: Option (B)

Short Explanation:
Expanded monitoring gives more cities real-time data, enabling better-informed public health advisories and policy action.

Question 190

Which action reflects good civic behaviour regarding air pollution during a high-AQI period?

A. Continuing to burn garden waste as usual

B. Avoiding open burning and encouraging neighbours to do the same

C. Ignoring GRAP restrictions

D. Increasing unnecessary vehicle idling

Correct Answer: Option (B)

Short Explanation:

Avoiding open burning and encouraging similar behaviour among neighbours directly supports community-level air quality improvement.

Question 191

What is the relationship between stubble burning and seasonal air quality in North India?

A. No relationship exists

B. Stubble burning in neighbouring states significantly contributes to seasonal pollution spikes, especially in Delhi-NCR

C. Stubble burning improves air quality

D. Stubble burning only affects rural areas

Correct Answer: Option (B)

Short Explanation:

Stubble burning in states neighbouring Delhi-NCR is a significant seasonal contributor to sharp pollution spikes in the region.

Question 192

Which of the following best supports long-term reduction in a city's particulate pollution levels?

A. One-time dust suppression during a festival

B. Sustained enforcement of emission standards, green cover expansion, and public transport investment

C. Ignoring non-attainment status

D. Reducing air quality monitoring

Correct Answer: Option (B)

Short Explanation:

Long-term improvement requires sustained, combined action across enforcement, green infrastructure, and transport policy — not one-off measures.

Question 193

What is the main purpose of N95 masks recommended on high-pollution days?

A. To filter out fine particulate matter from inhaled air

B. To increase oxygen intake

C. To eliminate all pollutants from the atmosphere

D. To replace the need for AQI monitoring

Correct Answer: Option (A)

Short Explanation:

N95 masks are designed to filter fine particulate matter, reducing the amount of harmful particles inhaled on high-pollution days.

Question 194

Which of the following statements about indoor air pollution is accurate?

A. Indoor air is always cleaner than outdoor air

B. Poor ventilation and indoor pollution sources can make indoor air more polluted than outdoor air

C. Indoor air pollution does not exist

D. Indoor pollution only affects industrial workers

Correct Answer: Option (B)

Short Explanation:

Indoor pollution sources combined with poor ventilation can, in some cases, make indoor air quality worse than outdoor air.

Question 195

What kind of policy tool is the Graded Response Action Plan (GRAP), in essence?

A. A voluntary suggestion with no enforcement

B. A staged, threshold-triggered emergency response system with escalating restrictions

C. A permanent, unchanging set of rules

D. A purely informational campaign

Correct Answer: Option (B)

Short Explanation:

GRAP is a staged emergency response system where specific restrictions are automatically triggered as AQI crosses defined thresholds.

Question 196

Which factor most directly determines whether a city is designated as 'non-attainment' under NCAP?

A. Its population size alone

B. Persistent failure to meet NAAQS over five consecutive years

C. Its geographic location only

D. The number of vehicles registered there

Correct Answer: Option (B)

Short Explanation:

Non-attainment status is specifically determined by a city's persistent failure to meet National Ambient Air Quality Standards over five years.

Question 197

Why is public transport promotion considered a pollution-prevention strategy rather than just a convenience measure?

A. Public transport has no effect on emissions

B. Consolidating commuters into shared vehicles reduces the total number of vehicles on the road and associated emissions

C. Public transport increases per-person emissions

D. It only affects traffic congestion, not pollution

Correct Answer: Option (B)

Short Explanation:

Shifting commuters from individual vehicles to shared public transport reduces the total emissions generated per person travelling.

Question 198

Which of these best reflects responsible civic behaviour toward a neighbour burning garbage regularly?

A. Ignoring it as none of your concern

B. Raising the issue directly where safe, and reporting it to authorities if it continues

C. Joining in the burning

D. Assuming it's legal without checking

Correct Answer: Option (B)

Short Explanation:

Raising the issue directly and escalating to authorities if needed reflects responsible civic engagement with an ongoing pollution violation.

Question 199

Which of the following best describes why AQI is calculated from the worst-performing pollutant sub-index rather than an average?

A. Averaging is always more accurate

B. Using the worst sub-index ensures the reported AQI reflects the most serious health risk present that day

C. It is a random design choice

D. It has no bearing on health accuracy

Correct Answer: Option (B)

Short Explanation:

Using the worst-performing pollutant sub-index ensures AQI reflects the most serious health risk on a given day, rather than diluting it through averaging.

Question 200

What long-term infrastructure investment most directly helps reduce a city's dependency on private vehicles?

A. Building more parking garages
B. Expanding and improving public transport networks
C. Widening roads exclusively for cars
D. Removing pedestrian pathways

Correct Answer: Option (B)

Short Explanation:
Expanding and improving public transport infrastructure directly reduces reliance on private vehicles, cutting associated emissions over time.

Question 201

Which of the following is a renewable energy source?

A. Coal
B. Natural gas
C. Solar energy
D. Petroleum

Correct Answer: Option (C)

Short Explanation:
Solar energy is naturally replenished and does not deplete with use, making it a renewable energy source.

Question 202

Which of the following is a non-renewable energy source?

A. Wind
B. Hydropower
C. Coal
D. Solar

Correct Answer: Option (C)

Short Explanation:
Coal is a finite fossil fuel formed over millions of years and does not replenish within a human timescale.

Question 203

What does a BEE star rating indicate on an appliance?

A. Its selling price
B. Its energy efficiency level
C. Its brand popularity
D. Its warranty period

Correct Answer: Option (B)

Short Explanation:
The BEE star rating indicates an appliance's energy efficiency, from 1 star (least efficient) to 5 stars (most efficient).

Question 204

What does 'net metering' allow a rooftop solar owner to do?

A. Sell electricity at unlimited prices
B. Receive credit for surplus electricity sent back to the grid
C. Avoid paying any electricity bill ever
D. Disconnect entirely from the grid

Correct Answer: Option (B)

Short Explanation:
Net metering credits a rooftop solar owner's account for any surplus electricity their system sends back to the grid.

Question 205

Which scheme subsidises rooftop solar installation for Indian households?

A. Jal Jeevan Mission
B. PM Surya Ghar: Muft Bijli Yojana
C. Namami Gange
D. Swachh Bharat Mission

Correct Answer: Option (B)

Short Explanation:
PM Surya Ghar: Muft Bijli Yojana, launched in 2024, subsidises rooftop solar installation, targeting one crore households.

Question 206

What is India's approximate total non-fossil power capacity as of March 2026?

A. Around 50 GW
B. Around 150 GW
C. Over 283 GW
D. Over 1,000 GW

Correct Answer: Option (C)

Short Explanation:
India's non-fossil power capacity crossed 283 GW by March 2026, comprising renewables and nuclear power combined.

Question 207

Which energy source contributes the largest share to India's renewable capacity?

A. Wind power
B. Solar power
C. Bio energy
D. Small hydro

Correct Answer: Option (B)

Short Explanation:
Solar power, at over 150 GW as of March 2026, is by far India's largest renewable energy source.

Question 208

What does the Bureau of Energy Efficiency (BEE) primarily regulate?

A. Wildlife protection standards
B. Appliance energy-efficiency labelling and standards
C. Water pollution limits
D. Forest cover assessment

Correct Answer: Option (B)

Short Explanation:
BEE administers India's star-rating labelling programme and drives national energy efficiency standards for appliances.

Question 209

What is a 'photovoltaic (PV)' system?

A. A wind turbine
B. Technology that converts sunlight directly into electricity
C. A hydropower dam
D. A battery storage unit only

Correct Answer: Option (B)

Short Explanation:
Photovoltaic technology directly converts sunlight into electricity, forming the basis of solar panel systems.

Question 210

When did India achieve 50% of its cumulative installed electricity capacity from non-fossil sources?

A. June 2020
B. June 2025
C. June 2030
D. It has not yet been achieved

Correct Answer: Option (B)

Short Explanation:
India reached 50% non-fossil capacity in June 2025, five years ahead of its 2030 Paris Agreement target.

Question 211

What is India's target year for reaching 500 GW of non-fossil electricity capacity under its NDC?

A. 2025
B. 2030
C. 2050
D. 2070

Correct Answer: Option (B)

Short Explanation:
India's Nationally Determined Contribution targets 500 GW of non-fossil electricity capacity by 2030.

Question 212

Which of the following best describes 'energy efficiency'?

A. Using more energy to achieve the same output
B. Using less energy to achieve the same output or task
C. Generating energy through fossil fuels only
D. Storing energy indefinitely

Correct Answer: Option (B)

Short Explanation:
Energy efficiency means accomplishing the same task or output while consuming less energy overall.

Question 213

What is the recommended efficient temperature range for air conditioners to conserve energy?

A. 16-18°C
B. 24-26°C
C. 30-32°C
D. There is no recommended range

Correct Answer: Option (B)

Short Explanation:
Setting air conditioners to 24-26°C is generally recommended as an energy-efficient temperature range.

Question 214

Which ministry is the apex national body for India's renewable energy policy?

A. Ministry of Power
B. Ministry of New and Renewable Energy (MNRE)
C. Ministry of Home Affairs
D. Ministry of Jal Shakti

Correct Answer: Option (B)

Short Explanation:
MNRE is the apex national body responsible for renewable energy policy and programme implementation in India.

Question 215

What was the record amount of non-fossil capacity India added in FY 2025-26?

A. 10 GW
B. 25 GW
C. 55.3 GW
D. 150 GW

Correct Answer: Option (C)

Short Explanation:
India added a record 55.3 GW of non-fossil capacity in FY 2025-26, the highest annual increase ever recorded.

Question 216

Which law establishes the legal framework for energy efficiency standards and the BEE in India?

A. Electricity Act, 2003
B. Energy Conservation Act, 2001 (as amended 2022)
C. Environment (Protection) Act, 1986
D. Air Act, 1981

Correct Answer: Option (B)

Short Explanation:
The Energy Conservation Act, 2001, as amended in 2022, establishes the legal framework for efficiency standards and BEE's role.

Question 217

What percentage of India's total electricity demand did renewables meet for the first time on 29 July 2025?

A. 25%
B. 35%
C. 51.5%
D. 75%

Correct Answer: Option (C)

Short Explanation:
On 29 July 2025, renewables met 51.5% of India's total electricity demand for the first time, a notable milestone.

Question 218

Which of the following best explains why energy conservation remains important even as renewable capacity grows?

A. Conservation has no ongoing relevance
B. Every unit of electricity saved reduces the total generation capacity a country needs to build
C. Renewables eliminate the need for any conservation
D. Conservation only matters in non-renewable systems

Correct Answer: Option (B)

Short Explanation:
Conservation remains valuable because reducing demand lowers the total generation capacity needed, regardless of how clean that generation is.

Question 219

What is the National Green Hydrogen Mission's primary aim?

A. Banning all hydrogen use
B. Positioning India as a global hub for green hydrogen production and export
C. Increasing coal consumption
D. Eliminating solar energy investment

Correct Answer: Option (B)

Short Explanation:
The National Green Hydrogen Mission, launched in 2023, aims to make India a global hub for green hydrogen production and export.

Question 220

Which of the following actions best reflects energy conservation at the household level?

A. Leaving appliances on standby continuously
B. Switching off lights and fans when leaving a room
C. Ignoring appliance energy ratings
D. Running half-empty washing machine loads regularly

Correct Answer: Option (B)

Short Explanation:
Switching off lights and fans when not needed is a simple, direct way individuals can reduce unnecessary electricity consumption.

Question 221

What is 'distributed renewable energy (DRE)'?

A. Large centralised power plants only
B. Small-scale renewable installations located close to where power is consumed
C. A type of fossil fuel
D. A form of nuclear energy

Correct Answer: Option (B)

Short Explanation:
Distributed renewable energy refers to small-scale installations, like rooftop solar, situated close to the point of consumption.

Question 222

Which of the following is the correct definition of 'installed capacity'?

A. The amount of electricity actually consumed
B. The maximum electricity output a power source can generate
C. The cost of building a power plant
D. The number of employees at a power company

Correct Answer: Option (B)

Short Explanation:
Installed capacity refers to the maximum electricity output a power source is capable of generating, typically measured in MW or GW.

Question 223

Why might a household choose a 5-star rated refrigerator over a 2-star rated one despite a higher upfront cost?

A. 5-star appliances always cost less upfront
B. The energy savings over its lifetime often offset the higher initial price
C. 2-star appliances consume less energy
D. There is no meaningful difference between ratings

Correct Answer: Option (B)

Short Explanation:
Although 5-star appliances may cost more upfront, their lower electricity consumption over time often offsets the price difference.

Question 224

What role does the Central Electricity Authority (CEA) play in India's energy sector?

A. It regulates wildlife sanctuaries

B. It plans and monitors India's power sector development, including the shift to renewable-heavy generation

C. It manages water resources exclusively

D. It oversees waste management

Correct Answer: Option (B)

Short Explanation:

The CEA plans and monitors the development of India's power sector, including its transition toward greater renewable energy generation.

Question 225

Which of these is an example of using natural resources to reduce energy consumption at home?

A. Using artificial lighting throughout the day

B. Relying on natural daylight and ventilation where possible

C. Running air conditioners continuously

D. Ignoring window placement

Correct Answer: Option (B)

Short Explanation:

Using natural daylight and ventilation reduces the need for artificial lighting and cooling, directly conserving energy.

Question 226

What is 'green hydrogen', as distinct from conventional hydrogen production?

A. Hydrogen produced using coal

B. Hydrogen produced using renewable electricity, with no associated carbon emissions

C. Hydrogen extracted from petroleum only

D. A hydrogen compound found only in nature

Correct Answer: Option (B)

Short Explanation:

Green hydrogen is produced using renewable electricity sources, distinguishing it from carbon-intensive conventional hydrogen production methods.

Question 227

Which factor most directly explains India's rapid growth in solar capacity in recent years?

A. Declining global interest in renewables

B. Falling solar technology costs combined with strong government policy support

C. Reduced sunlight availability

D. Abandonment of climate targets

Correct Answer: Option (B)

Short Explanation:

A combination of falling technology costs and sustained government policy support has driven India's rapid solar capacity growth.

Question 228

What is the primary benefit of regular appliance servicing for energy efficiency?

A. It has no effect on energy consumption
B. Well-maintained appliances typically operate more efficiently, consuming less energy
C. It always increases energy consumption
D. It voids appliance warranties

Correct Answer: Option (B)

Short Explanation:
Regular servicing helps appliances operate at optimal efficiency, preventing the increased energy consumption that often accompanies poor maintenance.

Question 229

Which government scheme specifically targets solar-powered irrigation support for farmers?

A. PM-KUSUM Scheme
B. Namami Gange
C. Atal Bhujal Yojana
D. Swachh Bharat Mission

Correct Answer: Option (A)

Short Explanation:
The PM-KUSUM Scheme supports solar-powered irrigation for farmers, integrating renewable energy into agricultural practice.

Question 230

Why is India's simultaneous need to expand electricity access and reduce emissions considered a distinctive challenge?

A. These two goals are unrelated to each other
B. India must grow electricity supply for a developing economy while also transitioning to cleaner sources
C. India has no need to expand electricity access
D. Emission reduction has no connection to economic growth

Correct Answer: Option (B)

Short Explanation:
India faces the dual challenge of expanding electricity access for continued economic growth while simultaneously transitioning toward cleaner energy sources.

Question 231

What does 'kWh' (kilowatt-hour) measure?

A. Water consumption
B. Electricity consumption over time
C. Air quality levels
D. Vehicle emissions

Correct Answer: Option (B)

Short Explanation:
A kilowatt-hour is the standard unit used to measure and bill electricity consumption over a period of time.

Question 232

Which of the following would most reduce standby power waste in a household?

A. Leaving all chargers plugged in permanently

B. Unplugging chargers and devices when not actively in use

C. Increasing the number of plugged-in devices

D. Ignoring standby power draw entirely

Correct Answer: Option (B)

Short Explanation:

Unplugging devices when not in use eliminates unnecessary standby power draw, which can accumulate into meaningful energy waste over time.

Question 233

What is one criticism sometimes raised against large hydropower projects, despite being a renewable source?

A. They produce no electricity

B. They can carry significant ecological and social considerations, such as displacement and habitat disruption

C. They are the cleanest energy source with no drawbacks

D. They cannot generate any renewable power

Correct Answer: Option (B)

Short Explanation:

While renewable, large hydropower projects can involve ecological disruption and social displacement, distinguishing them from smaller-impact renewables.

Question 234

Which of the following best supports the claim that India's energy transition is among the fastest globally?

A. Stagnant renewable capacity over the past decade

B. Record annual capacity additions and early achievement of major national and international targets

C. No measurable change in India's energy mix

D. Declining investment in clean energy

Correct Answer: Option (B)

Short Explanation:

Record capacity additions and reaching major targets ahead of schedule support the characterisation of India's transition as unusually rapid.

Question 235

What is the primary purpose of energy audits in commercial or institutional buildings?

A. To increase energy consumption deliberately

B. To identify areas of energy waste and opportunities for efficiency improvement

C. To eliminate the need for electricity entirely

D. To replace the need for BEE ratings

Correct Answer: Option (B)

Short Explanation:

Energy audits systematically identify where a building is wasting energy, enabling targeted efficiency improvements.

Question 236

Which action would most effectively reduce a school's or office's energy consumption in common areas?

A. Installing motion-sensor or timer-based lighting
B. Leaving all lights on permanently
C. Removing natural lighting sources
D. Ignoring appliance maintenance

Correct Answer: Option (A)

Short Explanation:
Motion-sensor or timer-based lighting ensures energy is used only when spaces are actually occupied, reducing unnecessary consumption.

Question 237

What is the significance of India ranking third globally in installed renewable energy capacity?

A. It has no international significance
B. It reflects India's position among the world's leading nations in the renewable energy transition
C. It means India has the world's highest per capita renewable capacity
D. It only applies to solar power specifically

Correct Answer: Option (B)

Short Explanation:
Ranking third globally in installed renewable capacity places India among the world's leading nations in the ongoing energy transition.

Question 238

Which of these best reflects the concept of 'inversion' in a solar power system?

A. Converting DC electricity from panels into usable AC electricity
B. Converting AC electricity into DC electricity for storage
C. Reversing the direction of sunlight
D. Converting solar energy into wind energy

Correct Answer: Option (A)

Short Explanation:
An inverter converts the direct current (DC) electricity generated by solar panels into the alternating current (AC) electricity used by homes.

Question 239

What is one reason a rooftop solar system typically requires a net meter installation?

A. To measure only water usage
B. To accurately track and credit any surplus electricity sent back to the grid
C. To disconnect the system from the grid entirely
D. Net meters have no functional purpose

Correct Answer: Option (B)

Short Explanation:
A net meter tracks both electricity drawn from and sent back to the grid, enabling accurate billing credit for surplus solar generation.

Question 240

Which of the following best reflects a smart energy-saving habit for daily commuting?

A. Driving alone in a private vehicle for every trip

B. Carpooling or using public transport when feasible

C. Avoiding all vehicle maintenance

D. Idling the engine unnecessarily in traffic

Correct Answer: Option (B)

Short Explanation:

Carpooling or using public transport reduces per-person energy consumption and emissions compared to solo private vehicle use.

Question 241

Why does India's 2030 non-fossil capacity target being achieved five years early matter for global climate commitments?

A. It has no international relevance

B. It demonstrates that ambitious renewable energy targets are achievable ahead of schedule, informing global climate policy confidence

C. It means India has stopped investing in renewables

D. It only affects domestic policy

Correct Answer: Option (B)

Short Explanation:

Achieving major targets ahead of schedule builds international confidence that ambitious climate commitments are genuinely achievable.

Question 242

What is the main advantage of wind energy as a renewable source in coastal or open plain regions?

A. Wind energy requires no infrastructure

B. Consistent wind speeds in these regions make turbine-based generation particularly effective

C. Wind energy cannot be generated in open areas

D. Wind turbines function only indoors

Correct Answer: Option (B)

Short Explanation:

Coastal and open plain regions often have consistent wind speeds, making them particularly suitable for effective wind turbine-based electricity generation.

Question 243

Which of the following actions reflects responsible energy citizenship at a community level?

A. Discouraging solar adoption in housing societies
B. Advocating for and supporting rooftop solar adoption in residential communities
C. Ignoring shared infrastructure inefficiencies
D. Opposing all renewable energy initiatives

Correct Answer: Option (B)

Short Explanation:
Advocating for community-level rooftop solar adoption reflects proactive, responsible engagement with local renewable energy transition.

Question 244

What does 'non-fossil capacity' specifically include?

A. Only solar power
B. Combined renewable and nuclear power capacity
C. Only fossil fuel-based power
D. Only hydropower

Correct Answer: Option (B)

Short Explanation:
Non-fossil capacity refers to the combined total of renewable energy sources and nuclear power, both of which do not burn fossil fuels.

Question 245

Why is regular electricity bill review considered a useful energy-conservation practice?

A. It has no practical value
B. It helps identify unusual consumption spikes that may indicate inefficiency or waste
C. It only matters for large industries
D. It replaces the need for any other conservation habit

Correct Answer: Option (B)

Short Explanation:
Reviewing electricity bills regularly can reveal unusual consumption patterns, prompting investigation into potential inefficiencies or waste.

Question 246

Which combination best reflects India's dual strategy for a sustainable energy future?

A. Renewable expansion alone, without any conservation effort
B. Renewable energy expansion paired with energy conservation and efficiency measures
C. Conservation alone, without renewable investment
D. Neither renewable expansion nor conservation

Correct Answer: Option (B)

Short Explanation:
India's energy strategy combines expanding clean generation capacity with conservation and efficiency measures to reduce overall demand.

Question 247

What is a likely long-term outcome of sustained investment in energy-efficient appliances across Indian households?

A. No measurable national impact
B. A meaningful cumulative reduction in national electricity demand growth
C. Increased national electricity demand
D. No change in household electricity bills

Correct Answer: Option (B)

Short Explanation:
Widespread adoption of energy-efficient appliances can meaningfully reduce the growth of national electricity demand over time, even as usage increases.

Question 248

Which action should a household take first when noticing an appliance consuming unusually high electricity?

A. Ignore it and continue using it as normal
B. Check its BEE rating, age, and maintenance status for potential inefficiency
C. Immediately discard all household appliances
D. Assume it is a billing error only

Correct Answer: Option (B)

Short Explanation:
Investigating an appliance's rating, age, and maintenance status is a sensible first step in diagnosing unusually high electricity consumption.

Question 249

What is the main reason large-scale battery storage is becoming increasingly important alongside renewable energy expansion?

A. Batteries have no relevance to renewable energy
B. Storage helps address the intermittent nature of solar and wind generation, ensuring reliable supply
C. Batteries eliminate the need for any grid infrastructure
D. Storage is only relevant to electric vehicles

Correct Answer: Option (B)

Short Explanation:
Battery storage helps balance supply during periods when solar and wind generation is low, addressing the intermittency of these renewable sources.

Question 250

Which of the following best reflects a practical way schools can model energy conservation to students?

A. Leaving all classroom lights on overnight
B. Demonstrating natural lighting use and appliance switch-off habits during school hours
C. Avoiding any discussion of energy topics
D. Increasing unnecessary electronic equipment use

Correct Answer: Option (B)

Short Explanation:
Schools modelling practical habits like using natural light and switching off unused appliances reinforces energy conservation lessons for students.

Question 251

What is 'global warming'?

A. A daily weather fluctuation
B. The long-term rise in Earth's average surface temperature
C. A type of natural disaster
D. A seasonal rainfall pattern

Correct Answer: Option (B)

Short Explanation:
Global warming refers to the long-term increase in Earth's average surface temperature, primarily driven by greenhouse gas emissions.

Question 252

What is the 'greenhouse effect'?

A. A farming technique
B. A natural process where gases trap heat in the atmosphere, keeping Earth warm enough to sustain life
C. A type of pollution control system
D. A form of renewable energy

Correct Answer: Option (B)

Short Explanation:
The greenhouse effect is a natural process where certain gases trap heat in the atmosphere, which has been intensified by human emissions.

Question 253

Which of the following is a major greenhouse gas released by burning fossil fuels?

A. Oxygen
B. Carbon dioxide
C. Nitrogen
D. Helium

Correct Answer: Option (B)

Short Explanation:
Carbon dioxide is a major greenhouse gas released primarily through the burning of fossil fuels and deforestation.

Question 254

What is a 'carbon footprint'?

A. A type of shoe made from recycled materials
B. The total greenhouse gases generated by a person, product, or activity
C. A measurement of forest cover
D. A government tax on carbon

Correct Answer: Option (B)

Short Explanation:
A carbon footprint measures the total greenhouse gases generated, directly or indirectly, by an individual, product, or activity.

Question 255

What is the difference between climate 'mitigation' and 'adaptation'?

A. They mean the same thing
B. Mitigation reduces emissions; adaptation adjusts to unavoidable climate impacts
C. Mitigation only applies to industry; adaptation only applies to agriculture
D. Adaptation reduces emissions; mitigation adjusts to impacts

Correct Answer: Option (B)

Short Explanation:
Mitigation focuses on reducing or preventing emissions, while adaptation focuses on adjusting practices to cope with unavoidable climate impacts.

Question 256

What is India's national target year for achieving net-zero greenhouse gas emissions?

A. 2030
B. 2050
C. 2070
D. 2100

Correct Answer: Option (C)

Short Explanation:
India has committed to achieving net-zero emissions by 2070 under its Nationally Determined Contribution to the Paris Agreement.

Question 257

On how many days between January and November 2025 did India record extreme weather events, according to CSE data?

A. 150 of 334 days
B. 250 of 334 days
C. 331 of 334 days
D. All 365 days of the year

Correct Answer: Option (C)

Short Explanation:
India recorded extreme weather events on 331 of 334 days between January and November 2025, according to CSE's Climate India 2025 report.

Question 258

Which national body leads disaster management planning and response in India?

A. NTCA
B. National Disaster Management Authority (NDMA)
C. CPCB
D. BEE

Correct Answer: Option (B)

Short Explanation:
The NDMA is India's apex body for disaster management, responsible for planning, mitigation, response, and recovery.

Question 259

Which agency issues official weather warnings for cyclones and heatwaves in India?

A. India Meteorological Department (IMD)
B. Central Water Commission
C. Forest Survey of India
D. NTCA

Correct Answer: Option (A)

Short Explanation:
The India Meteorological Department is India's official agency responsible for weather forecasting and issuing hazard warnings.

Question 260

What is 'disaster risk reduction (DRR)'?

A. Ignoring natural hazards until they occur
B. Systematic efforts to reduce vulnerability to hazards through preparedness and resilient infrastructure
C. A type of insurance policy only
D. A method for increasing disaster frequency

Correct Answer: Option (B)

Short Explanation:
DRR involves systematic, proactive efforts — like early warning systems and resilient infrastructure — to reduce vulnerability to hazards.

Question 261

What is 'climate resilience'?

A. The ability to prevent all climate change
B. The capacity to anticipate, absorb, and recover from climate-related shocks
C. A type of renewable energy source
D. A government tax policy

Correct Answer: Option (B)

Short Explanation:
Climate resilience refers to a community's or system's capacity to withstand, adapt to, and recover from climate-related shocks and stresses.

Question 262

Which law establishes India's legal and institutional framework for disaster management?

A. Disaster Management Act, 2005
B. Environment (Protection) Act, 1986
C. Wildlife Protection Act, 1972
D. Energy Conservation Act, 2001

Correct Answer: Option (A)

Short Explanation:
The Disaster Management Act, 2005 establishes India's legal and institutional framework for disaster management, including the NDMA.

Question 263

What is Mission LiFE's connection to climate change response?

A. It has no connection to climate policy
B. It promotes individual behavioural change as a pillar of India's climate strategy
C. It is focused solely on wildlife conservation
D. It is an international disaster relief fund

Correct Answer: Option (B)

Short Explanation:
Mission LiFE positions mindful individual lifestyle choices as a core, complementary pillar of India's broader climate action strategy.

Question 264

Which state recorded the highest hydro-meteorological disaster death toll in India during 2024-25?

A. Kerala
B. Himachal Pradesh
C. Rajasthan
D. Punjab

Correct Answer: Option (B)

Short Explanation:
Himachal Pradesh recorded the highest death toll (408 deaths) from hydro-meteorological disasters in 2024-25, driven by cloudbursts and landslides.

Question 265

What does an 'early warning system' primarily achieve in disaster preparedness?

A. It prevents all natural disasters from occurring
B. It detects and communicates hazard risk before it strikes, allowing preparation
C. It has no practical function
D. It only applies to earthquakes

Correct Answer: Option (B)

Short Explanation:
Early warning systems detect potential hazards and communicate risk in advance, giving communities time to prepare and respond.

Question 266

According to CSE's Climate India assessments, how did extreme weather days change between 2022 and 2025?

A. They decreased steadily

B. They increased from 292 days (2022) to 331 days (2025, Jan-Nov)

C. They remained exactly the same

D. They dropped to zero

Correct Answer: Option (B)

Short Explanation:

Extreme weather days increased from 292 in 2022 to 331 (of 334 days, Jan-Nov) in 2025, showing an escalating trend.

Question 267

What best explains why the National Action Plan on Climate Change (NAPCC) includes multiple national missions?

A. Climate change affects only one sector

B. Climate change impacts multiple sectors — energy, water, agriculture, habitat — requiring a coordinated, multi-mission approach

C. NAPCC has only one mission

D. Missions are unrelated to climate policy

Correct Answer: Option (B)

Short Explanation:

NAPCC's eight missions reflect the fact that climate change affects multiple interconnected sectors, requiring a coordinated national response.

Question 268

Which of the following best describes a household's appropriate response to an official heatwave warning?

A. Continue intense outdoor activity as normal

B. Avoid outdoor activity during peak afternoon hours and stay hydrated

C. Ignore the warning entirely

D. Increase outdoor exposure deliberately

Correct Answer: Option (B)

Short Explanation:

Avoiding peak-hour outdoor activity and staying hydrated are appropriate precautions during an official heatwave warning.

Question 269

What is the primary purpose of a family emergency plan in disaster preparedness?

A. It has no practical use

B. It ensures household members know evacuation points, contacts, and procedures in advance of a disaster

C. It replaces the need for any government disaster response

D. It is only relevant for coastal households

Correct Answer: Option (B)

Short Explanation:

A family emergency plan ensures household members are prepared in advance, improving safety and response coordination during an actual disaster.

Question 270

Which of the following is an example of climate change 'adaptation' rather than 'mitigation'?

A. Switching to renewable energy

B. Building flood-resilient infrastructure in a vulnerable region

C. Reducing industrial emissions

D. Increasing forest cover to absorb carbon

Correct Answer: Option (B)

Short Explanation:

Building flood-resilient infrastructure adjusts to unavoidable climate impacts, making it an adaptation measure rather than emissions mitigation.

Question 271

What is a 'Nationally Determined Contribution (NDC)'?

A. A type of national disaster relief fund

B. A country's climate action targets submitted under the Paris Agreement

C. A local municipal tax

D. A wildlife conservation programme

Correct Answer: Option (B)

Short Explanation:

An NDC represents a country's self-determined climate action targets and commitments submitted under the Paris Agreement framework.

Question 272

Why might riverine states in eastern and northeastern India face disproportionate climate disaster risk?

A. They have no rivers

B. Their geography and population density near rivers make them more vulnerable to flooding

C. They experience no rainfall

D. They are located far from any water bodies

Correct Answer: Option (B)

Short Explanation:

Riverine states with high population density near major rivers face heightened flood risk, making them disproportionately vulnerable to climate-related disasters.

Question 273

Which action best reflects proactive household disaster preparedness?

A. Waiting until a disaster occurs to plan a response
B. Keeping an emergency kit with water, medicines, and a torch ready in advance
C. Ignoring official weather alerts
D. Assuming disasters will never affect their area

Correct Answer: Option (B)

Short Explanation:
Proactively preparing an emergency kit in advance ensures a household is ready to respond quickly and safely when a disaster occurs.

Question 274

What does 'net zero' mean in the context of climate policy?

A. Zero economic growth
B. A state where greenhouse gas emissions are balanced by removals from the atmosphere
C. Zero population growth
D. Zero industrial activity

Correct Answer: Option (B)

Short Explanation:
Net zero refers to a state where any remaining greenhouse gas emissions are balanced by an equivalent amount removed from the atmosphere.

Question 275

Which of these best reflects why 2025 was noted as a record-breaking year for India's climate data?

A. No climate records were broken
B. Multiple records were broken, including the warmest February in 124 years and among the driest Januaries since 1901
C. 2025 saw the coolest temperatures on record
D. Climate data collection stopped in 2025

Correct Answer: Option (B)

Short Explanation:
2025 saw multiple broken records, including India's warmest February in 124 years, reflecting escalating climate volatility.

Question 276

What is the primary function of State and District Disaster Management Authorities?

A. Setting national tax policy
B. Implementing disaster preparedness, response, and recovery at the state and local level
C. Managing international trade agreements
D. Regulating stock markets

Correct Answer: Option (B)

Short Explanation:
State and District Disaster Management Authorities implement disaster management activities locally, guided by NDMA's national framework.

Question 277

Why is 'compounding impact' a growing concern in India's climate disaster pattern?

A. Disasters never overlap or repeat

B. Communities face repeated, overlapping disasters with less time to recover between events

C. Compounding impact has no real-world relevance

D. Disasters are becoming less frequent

Correct Answer: Option (B)

Short Explanation:

As extreme weather events become more frequent, communities face overlapping disasters without adequate recovery time between them, compounding the harm.

Question 278

Which of the following best supports farmers in reducing climate-related agricultural risk?

A. Relying on a single crop variety only

B. Diversifying crops and using IMD agro-advisories for planting decisions

C. Ignoring seasonal weather forecasts

D. Avoiding any water-harvesting structures

Correct Answer: Option (B)

Short Explanation:

Crop diversification combined with using IMD's agro-advisories helps farmers make more climate-resilient planting decisions.

Question 279

What is the primary reason India's own historical carbon emissions are often discussed differently in climate negotiations compared to some other major economies?

A. India has never participated in climate negotiations

B. India's per capita emissions and historical contribution are comparatively lower relative to some developed economies

C. India has the world's highest total historical emissions

D. There is no distinction made in climate negotiations

Correct Answer: Option (B)

Short Explanation:

India's per capita and historical emissions are generally lower than some developed economies, a factor often raised in international climate equity discussions.

Question 280

Which of the following would most directly help reduce a community's vulnerability to flash floods?

A. Removing early warning systems

B. Investing in early warning systems and avoiding construction on natural drainage paths

C. Increasing construction on floodplains

D. Ignoring local hazard maps

Correct Answer: Option (B)

Short Explanation:

Early warning systems combined with avoiding construction on natural drainage paths directly reduce a community's vulnerability to flash flooding.

Question 281

What is one key feature of Mission LiFE's approach to climate change, as distinct from purely policy-driven approaches?

A. It focuses solely on industrial regulation

B. It emphasises individual behavioural change as a complementary pillar alongside policy and technology

C. It excludes any individual-level action

D. It has no relationship to household habits

Correct Answer: Option (B)

Short Explanation:

Mission LiFE distinctively emphasises individual behavioural change as an essential complement to policy and technological climate solutions.

Question 282

Which of the following best reflects the relationship between deforestation and climate change?

A. Deforestation has no climate impact

B. Deforestation reduces carbon absorption capacity and can contribute to increased greenhouse gas concentrations

C. Deforestation always reduces greenhouse gases

D. Forests have no role in the carbon cycle

Correct Answer: Option (B)

Short Explanation:

Forests absorb carbon dioxide; their removal both releases stored carbon and reduces future absorption capacity, contributing to climate change.

Question 283

What does the term 'extreme weather event' generally refer to?

A. Any typical daily weather pattern

B. A weather occurrence significantly outside the normal historical range

C. Only events lasting more than a month

D. Weather patterns limited to coastal regions

Correct Answer: Option (B)

Short Explanation:

Extreme weather events are occurrences — such as intense heatwaves or heavy rainfall — that fall significantly outside a region's normal historical weather range.

Question 284

Why is climate literacy increasingly considered an essential life skill rather than a specialist topic?

A. Climate change has no relevance to daily life

B. Understanding climate risks and responses helps individuals make safer, more informed everyday decisions

C. Only scientists need to understand climate change

D. Climate literacy has no practical application

Correct Answer: Option (B)

Short Explanation:

As climate change increasingly affects daily life through extreme weather, understanding it helps individuals make safer, better-informed decisions.

Question 285

Which is the most appropriate action for a citizen who sees new construction planned on a natural floodplain?

A. Ignore the proposal entirely

B. Raise concerns during the public consultation stage of the project's environmental clearance process

C. Support the construction without question

D. Assume floodplains have no ecological function

Correct Answer: Option (B)

Short Explanation:

Raising concerns during public consultation is an appropriate way for citizens to influence decisions that could increase community flood risk.

Question 286

What is one reason coldwaves and heatwaves in India are reportedly becoming less predictable in their seasonal timing?

A. Seasonal boundaries have always been unpredictable

B. Climate change is disrupting traditional seasonal patterns, causing earlier or more erratic onset of extreme temperature events

C. Seasonal weather has become perfectly predictable

D. There has been no change in seasonal weather patterns

Correct Answer: Option (B)

Short Explanation:

CSE assessments note a collapse of clear seasonal boundaries, with coldwaves and heatwaves arriving earlier or more erratically than historical patterns.

Question 287

Which of the following best reflects a 'compounding' climate risk scenario?

A. A single isolated rainfall event with no other impact

B. A flood followed shortly by a heatwave, leaving a community little time to recover between events

C. A year with no extreme weather at all

D. A drought occurring in complete isolation with full recovery time

Correct Answer: Option (B)

Short Explanation:

Compounding risk occurs when multiple disasters strike in close succession, leaving communities without adequate time to recover between events.

Question 288

What is the primary role of the Ministry of Environment, Forest and Climate Change (MoEFCC) regarding climate policy?

A. It has no role in climate policy

B. It coordinates India's national climate policy, including NAPCC and NDC commitments

C. It only manages wildlife sanctuaries

D. It regulates only air pollution, not climate policy

Correct Answer: Option (B)

Short Explanation:

MoEFCC coordinates India's overarching climate policy framework, including the National Action Plan on Climate Change and NDC commitments.

Question 289

Why does understanding both mitigation and adaptation matter for comprehensive climate action?

A. Only one approach is ever necessary

B. Some climate impacts are already unavoidable and require adaptation, while future risk requires ongoing mitigation

C. Mitigation and adaptation are identical concepts

D. Neither approach has practical value

Correct Answer: Option (B)

Short Explanation:

Comprehensive climate action requires both reducing future emissions (mitigation) and adjusting to impacts already underway (adaptation).

Question 290

Which of the following best reflects responsible civic behaviour during an official cyclone warning?

A. Ignoring evacuation guidance from local authorities

B. Following official evacuation guidance and moving valuables to safety in advance

C. Staying in a vulnerable coastal area regardless of warnings

D. Assuming warnings are always exaggerated

Correct Answer: Option (B)

Short Explanation:

Following official evacuation guidance and taking preparatory action reflects responsible, safety-conscious civic behaviour during a cyclone warning.

Question 291

What is a key reason the Internal Displacement Monitoring Centre (IDMC) tracks climate-related displacement in India?

A. Displacement has no connection to climate events

B. Extreme weather and disasters increasingly force people to relocate, requiring dedicated monitoring

C. IDMC tracks only political displacement

D. Climate displacement does not occur in India

Correct Answer: Option (B)

Short Explanation:

As extreme weather increasingly forces relocation, dedicated monitoring like IDMC's helps quantify and respond to climate-driven displacement.

Question 292

Which best reflects why India's climate vulnerability is described as disproportionately affecting certain regions?

A. All regions of India face identical climate risk

B. Geography, population density, and infrastructure vary regionally, creating uneven exposure to climate hazards

C. Climate risk is randomly distributed with no discernible pattern

D. Only coastal states face any climate risk

Correct Answer: Option (B)

Short Explanation:

Variations in geography, population density, and infrastructure across India's states create uneven exposure to different climate hazards.

Question 293

What is the most appropriate first action if a family receives an official flood warning for their low-lying area?

A. Ignore the warning and continue normal activities

B. Move important documents and valuables to higher ground and prepare to follow evacuation guidance

C. Wait until flooding begins before taking any action

D. Assume the warning does not apply to them

Correct Answer: Option (B)

Short Explanation:

Proactively securing valuables and preparing for possible evacuation are appropriate precautionary steps upon receiving an official flood warning.

Question 294

Which of the following best reflects the connection between Mission LiFE and disaster resilience?

A. The two concepts are entirely unrelated

B. Mindful individual choices, like reduced consumption, indirectly support broader climate resilience by addressing root causes of climate risk

C. Mission LiFE focuses only on disaster response, not everyday habits

D. Disaster resilience requires no connection to individual behaviour

Correct Answer: Option (B)

Short Explanation:

By encouraging mindful, lower-impact daily choices, Mission LiFE indirectly supports climate mitigation, which in turn reduces long-term disaster risk.

Question 295

Why is it inaccurate to think of climate change as only a 'coastal' or 'future' issue for India?

A. Climate change only affects coastal regions
B. Recent data shows extreme weather impacting inland, hill, and coastal regions alike, in the present day
C. Climate change has no measurable present-day impact
D. Only future generations will experience climate impacts

Correct Answer: Option (B)

Short Explanation:
Recent data shows extreme weather already affecting diverse regions across India, contradicting the notion that climate change is a distant, coastal-only concern.

Question 296

What is one practical way schools can build climate and disaster awareness among students?

A. Avoiding the topic entirely
B. Incorporating disaster preparedness drills and climate education into the curriculum
C. Focusing solely on unrelated subjects
D. Discouraging discussion of environmental topics

Correct Answer: Option (B)

Short Explanation:
Incorporating preparedness drills and climate education helps build practical awareness and readiness among students from an early age.

Question 297

Which of the following best reflects a mitigation action available to an individual household?

A. Building a stronger roof to withstand cyclones
B. Switching to renewable energy sources and reducing overall energy consumption
C. Relocating to a safer geographic area
D. Purchasing disaster insurance

Correct Answer: Option (B)

Short Explanation:
Switching to renewable energy and reducing consumption are mitigation actions that help reduce the household's contribution to future emissions.

Question 298

What long-term outcome does sustained investment in climate-resilient infrastructure aim to achieve?

A. Eliminating all future weather events
B. Reducing the human and economic toll of unavoidable climate-related disasters over time
C. Increasing vulnerability to disasters
D. Preventing any future infrastructure development

Correct Answer: Option (B)

Short Explanation:
Climate-resilient infrastructure aims to reduce the human and economic cost of disasters that cannot be entirely prevented, improving long-term outcomes.

Question 299

Which of the following best describes the purpose of India's Panchamrit commitments announced at COP26?

A. A set of unrelated trade agreements

B. A package of five climate commitments, including the 2070 net-zero target

C. A disaster relief fund only

D. A wildlife protection treaty

Correct Answer: Option (B)

Short Explanation:

India's Panchamrit commitments, announced at COP26, include five climate targets, most notably the 2070 net-zero emissions goal.

Question 300

Why is community-level check-in for vulnerable residents (such as the elderly) recommended during extreme heat events?

A. Vulnerable groups face no additional risk during heatwaves

B. Elderly and at-risk individuals are more susceptible to heat-related illness and may need additional support

C. Community check-ins have no practical value

D. Heatwaves only affect younger populations

Correct Answer: Option (B)

Short Explanation:

Elderly and other vulnerable individuals face higher risk of heat-related illness, making community check-ins a valuable protective measure during heatwaves.

Question 301

What are the three levels at which biodiversity operates?

A. Genetic, species, and ecosystem diversity

B. National, state, and local diversity

C. Plant, animal, and mineral diversity

D. Urban, rural, and coastal diversity

Correct Answer: Option (A)

Short Explanation:

Biodiversity operates at genetic, species, and ecosystem levels, each contributing to overall ecological resilience.

Question 302

How many globally recognised 'megadiverse' countries are there, including India?

A. 5

B. 10

C. 17

D. 50

Correct Answer: Option (C)

Short Explanation:

There are 17 globally recognised megadiverse countries, of which India is one, hosting a disproportionate share of world species.

Question 303

What is the highest level of protection for wildlife habitat in India's protected area system?

A. Community Reserve
B. Conservation Reserve
C. National Park
D. Buffer Zone

Correct Answer: Option (C)

Short Explanation:
National Parks offer the highest protection level, with no human settlement or resource extraction allowed.

Question 304

What is a 'wildlife sanctuary' distinguished by, compared to a national park?

A. It allows limited, regulated human activity while protecting specific species or habitats
B. It has zero legal protection
C. It is identical to a national park in every respect
D. It only exists outside India

Correct Answer: Option (A)

Short Explanation:
Wildlife sanctuaries protect specific species or habitats while allowing some regulated human activity, unlike the stricter national park category.

Question 305

What does the IUCN Red List track?

A. Government budgets
B. The global conservation status of species, from Least Concern to Extinct
C. National park boundaries
D. Water quality standards

Correct Answer: Option (B)

Short Explanation:
The IUCN Red List is the global inventory tracking the conservation status of species, helping prioritise protection efforts.

Question 306

Which law is India's primary wildlife protection legislation?

A. Wildlife Protection Act, 1972
B. Forest (Conservation) Act, 1980
C. Biological Diversity Act, 2002
D. Environment (Protection) Act, 1986

Correct Answer: Option (A)

Short Explanation:
The Wildlife Protection Act, 1972 is India's primary legislation for protecting wild animals, birds, and plants, and establishing protected areas.

Question 307

In which year was Project Tiger launched?

A. 1952
B. 1973
C. 1986
D. 2002

Correct Answer: Option (B)

Short Explanation:
Project Tiger was launched in 1973 with 9 reserves, following the alarming 1972 tiger census showing only 1,800 tigers remained.

Question 308

What was India's estimated wild tiger population in 2023?

A. 1,411
B. 2,000
C. 3,682
D. 5,000

Correct Answer: Option (C)

Short Explanation:
India's wild tiger population was estimated at 3,682 in 2023, a substantial recovery from the 2006 low of 1,411.

Question 309

Approximately what share of the world's wild tigers does India now host?

A. 10-15%
B. 30-40%
C. 70-75%
D. 95-100%

Correct Answer: Option (C)

Short Explanation:
India is home to an estimated 70-75% of the world's remaining wild tiger population, reflecting Project Tiger's success.

Question 310

Which body oversees Project Tiger and coordinates the All India Tiger Estimation?

A. National Tiger Conservation Authority (NTCA)
B. Wildlife Institute of India
C. Central Pollution Control Board
D. NDMA

Correct Answer: Option (A)

Short Explanation:
The National Tiger Conservation Authority oversees Project Tiger and coordinates the periodic All India Tiger Estimation.

Question 311

What is 'habitat fragmentation'?

A. Combining multiple small habitats into a large one

B. The breaking up of large continuous habitats into smaller, isolated patches

C. A method of afforestation

D. A wildlife breeding technique

Correct Answer: Option (B)

Short Explanation:

Habitat fragmentation refers to the division of large, continuous habitats into smaller, disconnected patches, often due to human development.

Question 312

Which of India's four biodiversity hotspots includes the Western Ghats?

A. It is one of the four hotspots itself

B. It is not a recognised hotspot

C. It is located outside India

D. It refers only to a marine reserve

Correct Answer: Option (A)

Short Explanation:

The Western Ghats is one of India's four internationally recognised biodiversity hotspots, alongside the Himalayas, Indo-Burma, and Sundaland.

Question 313

What does 'human-wildlife conflict' primarily arise from?

A. Excessive rainfall

B. Competition over shared space and resources as human settlements expand into natural habitats

C. Wildlife choosing to attack humans intentionally without cause

D. A surplus of natural resources

Correct Answer: Option (B)

Short Explanation:

Human-wildlife conflict typically arises from competition over shared space and resources as human development encroaches into natural habitats.

Question 314

Approximately how many individuals of the critically endangered Great Indian Bustard remain in the wild?

A. Under 5

B. 100-150

C. 1,000-1,500

D. 10,000+

Correct Answer: Option (B)

Short Explanation:

The Great Indian Bustard population is estimated at only 100-150 individuals, making it critically endangered, largely due to power line collisions.

Question 315

What is the primary threat to the Great Indian Bustard's survival?

A. Overfishing
B. Collisions with power lines
C. Ocean pollution
D. Excessive rainfall

Correct Answer: Option (B)

Short Explanation:
Collisions with power lines are the primary threat driving the Great Indian Bustard toward extinction.

Question 316

Which national park is known for having the highest tiger density of any protected area in the world?

A. Sundarbans National Park
B. Kaziranga National Park
C. Gir National Park
D. Ranthambore National Park

Correct Answer: Option (B)

Short Explanation:
Kaziranga National Park in Assam has the highest tiger density of any protected area globally, alongside a majority of the world's greater one-horned rhinoceros population.

Question 317

What is the Sundarbans uniquely known for regarding its tiger population?

A. It has no tigers at all
B. Its tigers are adapted to swimming and hunting in brackish tidal waters
C. Its tigers live exclusively in mountains
D. It is not a protected area

Correct Answer: Option (B)

Short Explanation:
The Sundarbans, the world's largest mangrove forest, hosts tigers uniquely adapted to swimming and hunting in brackish tidal environments.

Question 318

What is the International Big Cat Alliance (IBCA)?

A. A single-country conservation programme
B. A treaty-based intergovernmental body bringing together countries for global big cat conservation
C. A private zoo network
D. An anti-poaching app

Correct Answer: Option (B)

Short Explanation:
The IBCA, launched by India and formalised as a treaty-based body in 2025, brings together 27 countries to drive global big cat conservation.

Question 319

What is a 'biosphere reserve' designed to balance?

A. Tourism revenue and hunting rights
B. Conservation with sustainable use by local communities
C. Industrial growth and deforestation
D. Urban expansion and mining

Correct Answer: Option (B)

Short Explanation:
Biosphere reserves are designed to balance ecological conservation with sustainable resource use by local communities, recognised under UNESCO's MAB programme.

Question 320

What does a 'wildlife corridor' provide?

A. A tourist pathway only
B. A protected passage linking separated habitats for safe animal movement
C. A hunting zone
D. A boundary wall around a national park

Correct Answer: Option (B)

Short Explanation:
Wildlife corridors are protected passages that connect fragmented habitats, allowing animals to move safely between them.

Question 321

Which of the following is the most appropriate response upon witnessing wildlife products being sold illegally?

A. Purchase the item as a souvenir
B. Avoid purchasing and report it to the forest department or wildlife crime helpline
C. Ignore it completely
D. Encourage others to purchase similar items

Correct Answer: Option (B)

Short Explanation:
Avoiding purchase and reporting the activity helps forest authorities act against illegal wildlife trade and poaching.

Question 322

What does 'endemic species' mean?

A. A species found in every country
B. A species found naturally in only one specific geographic region
C. A species that has gone extinct
D. A domesticated animal species

Correct Answer: Option (B)

Short Explanation:
An endemic species is one found naturally in only one specific geographic region and nowhere else in the wild.

Question 323

Which of the following best explains why tiger recovery does not mean all Indian species are equally safe?

A. All species face identical conservation outcomes

B. Conservation success varies significantly by species, as seen with the critically endangered Great Indian Bustard despite tiger recovery

C. Tiger recovery guarantees safety for every other species automatically

D. There are no other endangered species in India

Correct Answer: Option (B)

Short Explanation:

Species-specific threats mean conservation success, like tiger recovery, does not automatically extend to other species facing different, unresolved threats.

Question 324

What is a 'keystone species'?

A. A species with no ecological role

B. A species that has a disproportionately large effect on its ecosystem relative to its abundance

C. A species found only in captivity

D. A species with no predators or prey

Correct Answer: Option (B)

Short Explanation:

A keystone species has an outsized influence on its ecosystem's structure and function relative to its population size.

Question 325

Which law regulates the diversion of forest land for non-forest use in India?

A. Forest (Conservation) Act, 1980

B. Wildlife Protection Act, 1972

C. Air Act, 1981

D. Biological Diversity Act, 2002

Correct Answer: Option (A)

Short Explanation:

The Forest (Conservation) Act, 1980 regulates the diversion of forest land for non-forest purposes, requiring government approval.

Question 326

What does the Biological Diversity Act, 2002 primarily protect?

A. Only tigers

B. India's biological resources and traditional knowledge from unauthorised use

C. Only marine ecosystems

D. Only urban green spaces

Correct Answer: Option (B)

Short Explanation:

The Biological Diversity Act, 2002 protects India's biological resources and associated traditional knowledge from unauthorised exploitation.

Question 327

Which international agreement regulates trade in endangered species, of which India is a signatory?

A. CITES
B. Paris Agreement
C. Kyoto Protocol
D. Montreal Protocol

Correct Answer: Option (A)

Short Explanation:
CITES (Convention on International Trade in Endangered Species) regulates international trade in endangered species, and India is a signatory.

Question 328

What percentage of India's geographical area is covered under its protected area network?

A. About 1%
B. About 5.32%
C. About 15%
D. About 33%

Correct Answer: Option (B)

Short Explanation:
India's protected area network of 1,014 sites covers approximately 5.32% of the country's total geographical area.

Question 329

Which of the following best describes the function of a 'buffer zone' around a tiger reserve?

A. It is identical to the core zone with no human activity allowed
B. It surrounds the core protected zone, allowing regulated, sustainable human use
C. It is entirely outside the reserve's management area
D. It has no defined boundaries

Correct Answer: Option (B)

Short Explanation:
A buffer zone surrounds the strictly protected core zone of a reserve, permitting limited, regulated human activity while supporting conservation.

Question 330

What is a primary reason citizen-science initiatives, like bird counts, matter for conservation?

A. They have no scientific value
B. They contribute valuable population and distribution data that supports conservation planning
C. They replace the need for professional research entirely
D. They only benefit tourism

Correct Answer: Option (B)

Short Explanation:
Citizen-science initiatives contribute valuable, large-scale observational data that supports professional conservation research and planning.

Question 331

Which of these best reflects an appropriate response to a wild animal straying into agricultural land near a village?

A. Direct confrontation with the animal
B. Alerting the local forest department promptly and avoiding direct confrontation
C. Ignoring the situation entirely
D. Retaliatory harm to the animal

Correct Answer: Option (B)

Short Explanation:
Alerting the forest department and avoiding direct confrontation ensures both human safety and appropriate, humane handling of the situation.

Question 332

What is the primary function of the Wildlife Institute of India (WII)?

A. Managing tax policy
B. Supporting wildlife science, training, and the National Wildlife Information System
C. Regulating air pollution
D. Managing municipal waste

Correct Answer: Option (B)

Short Explanation:
The WII is a premier research institution supporting wildlife science, training, and India's national wildlife data systems.

Question 333

Why are 'sacred groves' considered informal biodiversity conservation sites in parts of India?

A. They have no ecological function
B. Traditional community and religious practices have protected them from exploitation for generations
C. They are entirely man-made plantations
D. They receive no community involvement

Correct Answer: Option (B)

Short Explanation:
Sacred groves are community-protected forest patches preserved through cultural and religious tradition, functioning as informal, long-standing conservation sites.

Question 334

Which of the following is the most responsible behaviour for a tourist visiting a national park?

A. Feeding wild animals for photographs
B. Choosing a registered operator and maintaining safe, respectful distance from wildlife
C. Using flash photography close to animals
D. Straying from designated tourist zones

Correct Answer: Option (B)

Short Explanation:
Choosing responsible operators and maintaining safe distance minimises disturbance to wildlife while supporting sustainable, regulated tourism.

Question 335

What is 'afforestation', as distinct from 'reforestation'?

A. They are identical processes

B. Afforestation plants trees in areas without prior forest cover; reforestation restores previously forested land

C. Afforestation only occurs in deserts

D. Reforestation refers only to underwater ecosystems

Correct Answer: Option (B)

Short Explanation:

Afforestation involves planting trees in new areas without prior forest cover, while reforestation restores land that was previously forested.

Question 336

Why is genetic diversity within a species important for its long-term survival?

A. Genetic diversity has no bearing on survival

B. It builds resilience to disease, environmental change, and other stressors

C. Genetic diversity always weakens a species

D. It only matters for domesticated animals

Correct Answer: Option (B)

Short Explanation:

Greater genetic diversity within a species improves its resilience and adaptability to disease, environmental change, and other stressors.

Question 337

What is one reason poaching remains a persistent threat despite strong legal protections?

A. Poaching has been completely eliminated

B. High black-market demand for wildlife products continues to incentivise illegal activity despite enforcement efforts

C. Wildlife laws provide no penalties for poaching

D. Poaching is now fully legal in India

Correct Answer: Option (B)

Short Explanation:

Despite legal protections, high black-market demand for wildlife products continues to drive illegal poaching activity, requiring sustained enforcement.

Question 338

Which of the following best reflects the ecological value of pollinator-friendly native plants in a home garden?

A. They have no ecological benefit

B. They support local pollinator populations, contributing to broader biodiversity conservation

C. They attract only invasive species

D. They eliminate the need for any conservation elsewhere

Correct Answer: Option (B)

Short Explanation:

Native, pollinator-friendly plants support local pollinator populations, contributing modestly but meaningfully to broader biodiversity conservation efforts.

Question 339

What role do State Forest Departments play in India's wildlife conservation framework?

A. They have no operational role

B. They implement day-to-day protection, patrolling, and management of protected areas at the state level

C. They only handle national policy-making

D. They regulate international trade agreements

Correct Answer: Option (B)

Short Explanation:

State Forest Departments handle the practical, on-the-ground protection, patrolling, and management of protected areas within their states.

Question 340

Which of the following best explains why reporting suspected wildlife crime is an important citizen responsibility?

A. Citizen reports have no practical impact

B. Citizen reporting is often the first alert that enables forest departments to act against poaching and illegal trade

C. Only forest officials can detect wildlife crime

D. Reporting wildlife crime is illegal for private citizens

Correct Answer: Option (B)

Short Explanation:

Citizen vigilance and reporting frequently provide the first indication of illegal wildlife activity, enabling timely enforcement action.

Question 341

What is the ecological significance of mangrove forests like the Sundarbans beyond housing tigers?

A. They have no additional ecological function

B. They provide coastal protection, support fisheries, and sequester carbon

C. They only exist for tourism purposes

D. They have no connection to coastal communities

Correct Answer: Option (B)

Short Explanation:

Mangrove forests like the Sundarbans provide critical coastal protection, support fisheries, and play a significant role in carbon sequestration.

Question 342

Which of these best describes why India's biodiversity choices carry global significance?

A. India's biodiversity has no international relevance

B. As a megadiverse country hosting species found nowhere else, India's conservation decisions affect global biodiversity outcomes

C. Global biodiversity is unrelated to any single country's policy

D. India hosts no unique or endemic species

Correct Answer: Option (B)

Short Explanation:

As a megadiverse nation with unique, often endemic species, India's conservation choices have direct implications for global biodiversity.

Question 343

What is the primary purpose of 'conservation reserves' in India's protected area system?

A. To function identically to national parks

B. To serve as buffer zones adjoining protected areas, often on government land

C. To eliminate all community involvement

D. To permit unrestricted commercial development

Correct Answer: Option (B)

Short Explanation:

Conservation reserves typically serve as buffer zones adjoining stricter protected areas, often established on government land to extend habitat connectivity.

Question 344

Which best reflects the difference between a 'community reserve' and a 'conservation reserve'?

A. They are identical categories

B. Community reserves are managed with community participation, often on private or community land, while conservation reserves are typically on government land

C. Community reserves exist outside India

D. Conservation reserves are always larger than national parks

Correct Answer: Option (B)

Short Explanation:

Community reserves emphasise local community management, often on private or community land, distinguishing them from government-land conservation reserves.

Question 345

Why is responsible, low-impact ecotourism encouraged at wildlife reserves rather than unrestricted tourism?

A. Unrestricted tourism has no impact on wildlife

B. Responsible tourism minimises disturbance to wildlife behaviour and habitat while still allowing public engagement

C. Ecotourism eliminates all economic benefit

D. Wildlife reserves should have no visitors at all

Correct Answer: Option (B)

Short Explanation:

Responsible, low-impact tourism balances public engagement and conservation funding with minimising disturbance to sensitive wildlife and habitats.

Question 346

What was a key finding of India's 1972 tiger census that prompted the launch of Project Tiger?

A. Tiger numbers had reached an all-time high

B. Only around 1,800 tigers remained, revealing a conservation crisis

C. Tigers were found to be thriving without intervention

D. The census found no tigers remaining in India

Correct Answer: Option (B)

Short Explanation:

The 1972 census revealed a crisis, with only around 1,800 tigers remaining, directly prompting the launch of Project Tiger in 1973.

Question 347

Which of the following best reflects why camera traps and DNA analysis are used in tiger population monitoring?

A. These methods have no scientific value

B. They enable accurate, non-invasive population tracking essential for effective conservation planning

C. They are used only for entertainment purposes

D. They eliminate the need for any other conservation method

Correct Answer: Option (B)

Short Explanation:

Camera traps and DNA analysis provide accurate, non-invasive methods for tracking tiger populations, informing effective, evidence-based conservation planning.

Question 348

What is a practical way schools can support biodiversity awareness among students?

A. Avoiding any discussion of local wildlife

B. Encouraging participation in nature walks and tree-planting activities

C. Discouraging outdoor educational activities

D. Focusing exclusively on unrelated subjects

Correct Answer: Option (B)

Short Explanation:

Nature walks and tree-planting activities give students direct, practical exposure to biodiversity concepts, reinforcing classroom learning.

Question 349

Which best reflects why habitat corridors are increasingly prioritised in Indian conservation planning?

A. Corridors have no conservation value

B. Connecting fragmented habitats allows genetic exchange and safer movement, improving long-term species viability

C. Corridors increase human-wildlife conflict without benefit

D. Fragmented habitats pose no threat to species survival

Correct Answer: Option (B)

Short Explanation:

Habitat corridors reconnect fragmented landscapes, enabling genetic exchange and safer animal movement, both crucial for long-term species viability.

Question 350

What is the main reason the Central Government allocates specific annual funding to Project Tiger and Project Elephant?

A. These species require no ongoing conservation funding

B. Sustained financial support is necessary for habitat protection, anti-poaching efforts, and population monitoring

C. Funding is allocated randomly without justification

D. These programmes were discontinued after their initial launch

Correct Answer: Option (B)

Short Explanation:

Sustained annual funding supports ongoing habitat protection, anti-poaching patrols, and population monitoring essential to these flagship conservation programmes.

Question 351

Which article of the Indian Constitution lists the Fundamental Duties?

A. Article 21

B. Article 51A

C. Article 32

D. Article 19

Correct Answer: Option (B)

Short Explanation:

Article 51A of the Constitution lists the Fundamental Duties of Indian citizens.

Question 352

How many Fundamental Duties are listed under Article 51A?

A. Six

B. Nine

C. Eleven

D. Fifteen

Correct Answer: Option (C)

Short Explanation:

Article 51A lists eleven Fundamental Duties, ten added in 1976 and one more added in 2002.

Question 353

Which constitutional amendment introduced the Fundamental Duties?

A. 24th Amendment

B. 42nd Amendment

C. 73rd Amendment

D. 86th Amendment

Correct Answer: Option (B)

Short Explanation:

The 42nd Constitutional Amendment Act, 1976 introduced the original ten Fundamental Duties.

Question 354

Which amendment added the eleventh Fundamental Duty regarding education?

A. 44th Amendment
B. 74th Amendment
C. 86th Amendment
D. 101st Amendment

Correct Answer: Option (C)

Short Explanation:
The 86th Constitutional Amendment Act, 2002 added the eleventh Fundamental Duty on providing education for children aged six to fourteen.

Question 355

Which Fundamental Duty most directly relates to protecting public property?

A. Duty to pay taxes
B. Duty to safeguard public property and abjure violence
C. Duty to vote in elections
D. Duty to join the armed forces

Correct Answer: Option (B)

Short Explanation:
Article 51A(i) specifically requires citizens to safeguard public property and abjure violence.

Question 356

Are Fundamental Duties directly enforceable by courts in the same way as Fundamental Rights?

A. Yes, identically enforceable
B. No, they are generally non-justiciable unless backed by specific legislation
C. They are more enforceable than Fundamental Rights
D. Courts have no authority to reference them at all

Correct Answer: Option (B)

Short Explanation:
Fundamental Duties are generally non-justiciable, though courts have used them to interpret constitutional rights, and specific laws can make aspects enforceable.

Question 357

Which law prescribes penalties for causing damage to public property, including during riots?

A. Prevention of Damage to Public Property Act, 1984
B. Right to Information Act, 2005
C. Wildlife Protection Act, 1972
D. Energy Conservation Act, 2001

Correct Answer: Option (A)

Short Explanation:
The Prevention of Damage to Public Property Act, 1984 prescribes specific penalties for damaging public property, including during unlawful assembly.

Question 358

Which committee recommended the inclusion of Fundamental Duties in the Constitution?

A. Justice Verma Committee
B. Swaran Singh Committee
C. Sarkaria Commission
D. Finance Commission

Correct Answer: Option (B)

Short Explanation:
The Swaran Singh Committee recommended the inclusion of Fundamental Duties, which were subsequently added through the 42nd Amendment.

Question 359

What does the term 'public property' generally refer to?

A. Only privately owned homes
B. Assets owned collectively and funded by public money for shared community use
C. Only government employee salaries
D. Only foreign-owned assets

Correct Answer: Option (B)

Short Explanation:
Public property refers to assets like roads, parks, and government buildings, owned collectively and funded by public money for shared use.

Question 360

What is 'civic etiquette'?

A. A formal legal code
B. Everyday courtesies and considerate behaviours expected in shared public spaces
C. A type of government tax
D. A wildlife conservation term

Correct Answer: Option (B)

Short Explanation:
Civic etiquette refers to the everyday courtesies — like queuing and following traffic rules — expected in shared public spaces.

Question 361

What role do Resident Welfare Associations (RWAs) typically play in civic life?

A. They have no formal or informal function
B. They coordinate civic matters between residents and municipal authorities
C. They replace the judiciary
D. They set national tax policy

Correct Answer: Option (B)

Short Explanation:
RWAs are widely recognised community bodies that coordinate civic matters, like waste management or security, with municipal authorities.

Question 362

Which landmark Supreme Court case linked environmental protection to Article 51A(g) and the right to a pollution-free environment under Article 21?

A. M.C. Mehta v. Union of India
B. Kesavananda Bharati case
C. Indira Gandhi v. Raj Narain
D. Golaknath case

Correct Answer: Option (A)

Short Explanation:
M.C. Mehta v. Union of India is a landmark case connecting the Fundamental Duty to protect the environment (51A(g)) with the right to a pollution-free environment under Article 21.

Question 363

What did the Supreme Court reference in the Re Ramlila Maidan Incident case (2012) regarding citizens' obligations?

A. The right to vote
B. Article 51A(i)'s duty to respect public property
C. The right to education
D. The right to freedom of speech alone

Correct Answer: Option (B)

Short Explanation:
The Court referenced Article 51A(i), urging citizens to respect public property even amid criticism of state action during the incident.

Question 364

Which constitutional amendment strengthened urban local bodies (municipalities) as institutions of local self-government?

A. 42nd Amendment
B. 74th Amendment
C. 86th Amendment
D. 101st Amendment

Correct Answer: Option (B)

Short Explanation:
The 74th Constitutional Amendment Act, 1992 strengthened municipalities as institutions of local self-government in urban areas.

Question 365

What is the primary purpose of the Right to Information Act, 2005 in the context of civic responsibility?

A. To restrict citizen access to government data
B. To empower citizens to seek information from public authorities, supporting transparent governance
C. To eliminate local governance structures
D. To regulate private businesses only

Correct Answer: Option (B)

Short Explanation:
The RTI Act empowers citizens to request information from public authorities, supporting transparency and accountability in local governance.

Question 366

Which of the following best reflects responsible civic behaviour toward damaged public infrastructure?

A. Ignoring the damage entirely
B. Reporting it to the relevant municipal authority through proper channels
C. Causing further damage since it is already broken
D. Assuming someone else will always report it

Correct Answer: Option (B)

Short Explanation:
Reporting damaged infrastructure through proper municipal channels is the appropriate, responsible civic response.

Question 367

What does 'non-justiciable' mean in the context of Fundamental Duties?

A. They can be enforced by any citizen directly in court
B. They are not directly enforceable by courts unless backed by specific legislation
C. They have no legal status whatsoever
D. They apply only to government officials

Correct Answer: Option (B)

Short Explanation:
Non-justiciable means courts cannot directly enforce these duties, though specific legislation can make certain aspects legally enforceable.

Question 368

Which Fundamental Duty specifically encourages developing 'scientific temper and the spirit of inquiry'?

A. Article 51A(g)
B. Article 51A(h)
C. Article 51A(i)
D. Article 51A(a)

Correct Answer: Option (B)

Short Explanation:
Article 51A(h) encourages citizens to develop scientific temper, humanism, and the spirit of inquiry and reform.

Question 369

What is the significance of Part IV-A of the Indian Constitution?

A. It contains the Fundamental Rights
B. It contains the Fundamental Duties
C. It establishes the judiciary
D. It defines state boundaries

Correct Answer: Option (B)

Short Explanation:
Part IV-A of the Constitution specifically contains the Fundamental Duties listed under Article 51A.

Question 370

Which of the following best illustrates 'community participation' in civic life?

A. Avoiding all local meetings and initiatives
B. Attending local governance meetings and supporting neighbourhood clean-up drives
C. Ignoring public consultations entirely
D. Relying solely on the government without any personal involvement

Correct Answer: Option (B)

Short Explanation:
Active involvement in local meetings and community initiatives exemplifies meaningful community participation in civic life.

Question 371

Why are rights and duties placed together in India's constitutional design?

A. They are entirely unrelated concepts
B. To create a balance where rights empower citizens while duties remind them of responsibilities toward the community
C. Duties replace the need for rights entirely
D. Rights and duties serve identical functions

Correct Answer: Option (B)

Short Explanation:
The Constitution places rights and duties together to balance citizen empowerment with a reminder of collective responsibility.

Question 372

Which of the following is an example of 'volunteering' as a civic responsibility?

A. Ignoring local environmental initiatives
B. Participating in a tree plantation or clean-up drive
C. Avoiding all community engagement
D. Refusing to report civic violations

Correct Answer: Option (B)

Short Explanation:
Participating in initiatives like tree plantation or clean-up drives is a direct example of civic volunteering.

Question 373

What is the main function of a municipal corporation?

A. Managing national defence

B. Managing civic services like roads, sanitation, and street lighting at the city level

C. Setting national foreign policy

D. Managing the stock market

Correct Answer: Option (B)

Short Explanation:

Municipal corporations are the local governing bodies responsible for day-to-day civic services like roads, sanitation, and lighting.

Question 374

Which of the following best reflects 'civic sense'?

A. Complete disregard for public spaces

B. Awareness of and consideration for the needs of the wider community

C. Prioritising personal convenience over all public considerations

D. A term with no practical meaning

Correct Answer: Option (B)

Short Explanation:

Civic sense reflects an individual's awareness of and consideration for the shared needs of the broader community.

Question 375

Why does the Justice J.S. Verma Committee's 1999 review of Fundamental Duties remain relevant?

A. It has no ongoing relevance

B. It identified existing laws that could indirectly enforce specific Fundamental Duties, shaping their legal application

C. It abolished Fundamental Duties entirely

D. It only addressed unrelated criminal law matters

Correct Answer: Option (B)

Short Explanation:

The Committee's findings on indirect enforceability continue to inform how Fundamental Duties are interpreted and applied through specific legislation.

Question 376

What is the most appropriate response to witnessing someone vandalising a public bus shelter?

A. Join in the vandalism

B. Report the incident to municipal authorities through appropriate channels

C. Ignore it completely

D. Assume it is not a real violation

Correct Answer: Option (B)

Short Explanation:

Reporting vandalism to municipal authorities is the appropriate civic response, supporting accountability and repair.

Question 377

Which of the following best reflects why public property protection depends on citizen behaviour, not just government funding?

A. Government funding alone guarantees infrastructure remains functional

B. Public infrastructure requires ongoing responsible use by citizens to remain usable, regardless of funding levels

C. Citizens have no role in infrastructure maintenance

D. Public property maintains itself without any external input

Correct Answer: Option (B)

Short Explanation:

Even well-funded public infrastructure depends on responsible citizen use and behaviour to remain functional and usable long-term.

Question 378

What is a 'public grievance' in civic terms?

A. A private family dispute

B. A formal complaint raised by a citizen regarding a public service or civic issue

C. A type of criminal offence only

D. A political party manifesto

Correct Answer: Option (B)

Short Explanation:

A public grievance is a formal complaint a citizen raises regarding a public service or civic issue through appropriate channels.

Question 379

Which of the following best reflects the Fundamental Duty to 'promote harmony and the spirit of common brotherhood'?

A. Encouraging division among community groups

B. Encouraging respectful, inclusive behaviour toward all members of society

C. Ignoring social diversity entirely

D. Prioritising one community's interests over others

Correct Answer: Option (B)

Short Explanation:

This duty encourages citizens to foster harmony and inclusive, respectful behaviour across India's diverse communities.

Question 380

Why might a citizen's small act, like following a queue, be considered part of civic responsibility?

A. Small acts have no bearing on civic life
B. Everyday behaviours collectively shape the functioning and fairness of shared public spaces
C. Only large-scale actions matter for civic responsibility
D. Queuing has no connection to civic behaviour

Correct Answer: Option (B)

Short Explanation:
Everyday behaviours like queuing collectively contribute to fair, orderly functioning of shared public spaces, forming the basis of civic responsibility.

Question 381

What is the primary role of the Ministry of Home Affairs regarding public property protection?

A. It has no role in this area
B. It oversees the Prevention of Damage to Public Property Act, 1984 and related law and order matters
C. It manages forest conservation exclusively
D. It regulates only international trade

Correct Answer: Option (B)

Short Explanation:
The Ministry of Home Affairs oversees implementation of laws like the Prevention of Damage to Public Property Act, alongside broader law and order coordination.

Question 382

Which of the following best reflects a proactive approach to civic participation, rather than a reactive one?

A. Waiting for problems to arise before engaging
B. Actively attending community meetings and volunteering before issues escalate
C. Avoiding any civic involvement entirely
D. Only participating when personally inconvenienced

Correct Answer: Option (B)

Short Explanation:
Proactive civic participation involves engaging with community initiatives and governance before problems escalate, rather than only reacting afterward.

Question 383

What does the duty to 'strive towards excellence in individual and collective activity' under Article 51A(j) encourage?

A. Complacency in personal and community efforts
B. Active contribution to both personal growth and the nation's collective progress
C. Avoiding all forms of ambition
D. Prioritising individual gain over any collective benefit

Correct Answer: Option (B)

Short Explanation:
This duty encourages citizens to actively contribute to excellence both in their personal endeavours and in collective national progress.

Question 384

Why is teaching Fundamental Duties alongside Fundamental Rights considered valuable in schools?

A. Duties and rights are unrelated topics for education

B. It helps build a balanced understanding of the relationship between citizen empowerment and responsibility from an early age

C. Schools should not discuss constitutional matters

D. Only rights, not duties, matter for civic education

Correct Answer: Option (B)

Short Explanation:

Teaching both rights and duties together helps students develop a balanced understanding of civic empowerment and responsibility from an early age.

Question 385

Which of the following best reflects a Resident Welfare Association's typical role in waste management?

A. Setting national waste policy

B. Coordinating segregated door-to-door collection with municipal bodies at the local level

C. Replacing the need for any municipal service

D. Managing international trade in recyclables

Correct Answer: Option (B)

Short Explanation:

RWAs often play a practical, local coordinating role in waste segregation efforts, working alongside municipal collection systems.

Question 386

What is the broader significance of the 74th Constitutional Amendment for civic governance?

A. It abolished all local governance structures

B. It strengthened municipal bodies, enabling more effective local self-governance and civic service delivery

C. It transferred all local powers to the central government

D. It has no bearing on civic responsibility

Correct Answer: Option (B)

Short Explanation:

By strengthening municipal institutions, the 74th Amendment enabled more effective and accountable local self-governance and civic service delivery.

Question 387

Which of the following actions best demonstrates civic responsibility during a public consultation on a local infrastructure project?

A. Ignoring the consultation entirely

B. Reviewing the proposal and raising informed concerns or support during the consultation period

C. Assuming public consultations have no real impact

D. Waiting until after construction to raise objections

Correct Answer: Option (B)

Short Explanation:

Engaging meaningfully during the public consultation period is the appropriate and effective way to influence local infrastructure decisions.

Question 388

What is the primary distinction between a 'right' and a 'duty' in constitutional terms?

A. They are identical concepts with different names

B. A right empowers an individual, while a duty obligates them toward the community or state

C. Duties apply only to government officials

D. Rights have no connection to citizenship

Correct Answer: Option (B)

Short Explanation:

Rights empower individuals with protections and freedoms, while duties obligate them to act responsibly toward the community and state.

Question 389

Why does the Constitution's placement of duties alongside rights matter for interpreting Indian law?

A. It has no interpretive significance

B. Courts have used Fundamental Duties to inform the interpretation of Fundamental Rights and constitutional provisions

C. Duties override all rights automatically

D. Rights and duties are interpreted in complete isolation from each other

Correct Answer: Option (B)

Short Explanation:

Courts have referenced Fundamental Duties when interpreting the scope and application of Fundamental Rights, showing their interconnected constitutional role.

Question 390

Which of the following best reflects civic responsibility in the context of shared public transport?

A. Occupying more space than necessary
B. Being considerate of fellow passengers and following transport etiquette
C. Ignoring transport rules entirely
D. Prioritising personal comfort over shared courtesy

Correct Answer: Option (B)

Short Explanation:
Following transport etiquette and being considerate of fellow passengers reflects civic responsibility in shared public spaces.

Question 391

What is a practical first step for a citizen wanting to formally engage with local governance?

A. Avoiding all interaction with local bodies
B. Attending local municipal or ward meetings and understanding local grievance redressal mechanisms
C. Waiting indefinitely without taking any action
D. Assuming local governance has no accessible entry points

Correct Answer: Option (B)

Short Explanation:
Attending local meetings and understanding grievance redressal mechanisms are practical, accessible first steps for civic engagement.

Question 392

Which of the following best reflects why civic responsibility is described as a 'daily discipline' rather than an occasional act?

A. Civic responsibility only matters during elections
B. Everyday choices about public spaces and resources cumulatively shape community outcomes over time
C. Occasional large acts are more important than daily habits
D. Civic responsibility has no connection to daily life

Correct Answer: Option (B)

Short Explanation:
Community outcomes are shaped by the cumulative effect of everyday civic choices, not just occasional, large-scale actions.

Question 393

What is the appropriate civic response if a citizen witnesses queue-jumping or traffic rule violations in public?

A. Model good civic etiquette themselves, and where safe, gently note the shared rules
B. Ignore all such behaviour permanently
C. Adopt the same behaviour themselves
D. Escalate to physical confrontation immediately

Correct Answer: Option (A)

Short Explanation:
Modelling good behaviour and gently reinforcing shared norms, where safe and appropriate, reflects a constructive civic response.

Question 394

Which best reflects the constitutional intent behind requiring citizens to 'abjure violence' under Article 51A(i)?

A. To promote conflict resolution through violent means
B. To encourage peaceful, lawful means of expressing grievances and resolving disputes
C. To eliminate all forms of civic protest
D. To have no bearing on public order

Correct Answer: Option (B)

Short Explanation:
This duty encourages citizens to pursue peaceful, lawful avenues for expressing grievances rather than resorting to violence.

Question 395

Why is civic education about Fundamental Duties considered as important as education about Fundamental Rights?

A. Duties are more legally binding than rights
B. A balanced understanding of both fosters responsible citizenship and functional community life
C. Rights have no educational value
D. Only duties should be taught in schools

Correct Answer: Option (B)

Short Explanation:
Understanding both rights and duties together fosters responsible, balanced citizenship essential for functional community and national life.

Question 396

What is the most effective long-term strategy for sustaining well-maintained public spaces in a community?

A. Relying solely on periodic government-funded renovations
B. Combining adequate government investment with consistent, responsible citizen use and reporting
C. Ignoring citizen behaviour entirely in maintenance planning
D. Assuming public spaces require no ongoing attention

Correct Answer: Option (B)

Short Explanation:
Sustained maintenance of public spaces depends on combining government investment with consistent, responsible citizen behaviour and civic reporting.

Question 397

Which of the following best captures the relationship between Fundamental Duty 51A(g) and environmental civic responsibility?

A. The duty has no connection to environmental behaviour

B. It directly obligates citizens to protect and improve the natural environment, linking constitutional duty to everyday environmental action

C. Environmental protection is unrelated to constitutional duties

D. This duty applies only to government agencies

Correct Answer: Option (B)

Short Explanation:

Article 51A(g) directly links constitutional civic duty to environmental protection, providing a constitutional basis for everyday environmentally responsible behaviour.

Question 398

What is the most appropriate way for a citizen to escalate an unresolved civic complaint after initial reporting?

A. Give up after one attempt

B. Follow up through official grievance redressal channels or escalate to a higher municipal authority

C. Take matters into their own hands unlawfully

D. Assume nothing more can be done

Correct Answer: Option (B)

Short Explanation:

Following up through official grievance channels or escalating appropriately ensures unresolved civic issues receive continued attention.

Question 399

Why does India's constitutional framework avoid making Fundamental Duties directly enforceable by courts in most cases?

A. Duties were considered unimportant by the framers

B. Duties are generally framed as moral and civic obligations, with enforceability achieved through specific legislation rather than direct judicial action

C. Enforcing duties would violate all Fundamental Rights

D. There is no reason; it was an oversight

Correct Answer: Option (B)

Short Explanation:

Duties were framed as broader moral and civic obligations, with Parliament empowered to create specific enforceable legislation where needed, rather than direct judicial enforcement.

Question 400

Which of the following best reflects how a school can practically instil civic responsibility among students beyond classroom teaching?

A. Avoiding any hands-on civic activities
B. Organising student-led clean-up drives and civic awareness campaigns
C. Discouraging student involvement in community affairs
D. Limiting civic education to theoretical exams only

Correct Answer: Option (B)

Short Explanation:
Hands-on activities like student-led clean-up drives give practical civic experience that reinforces classroom learning on responsibility and community engagement.

Question 401

What does Mission LiFE stand for?

A. Lifestyle for Environment
B. Living in Full Ecology
C. Legal Initiative for Environment
D. Local Initiative for Energy

Correct Answer: Option (A)

Short Explanation:
Mission LiFE stands for 'Lifestyle for Environment', India's national movement promoting sustainable individual lifestyle choices.

Question 402

When was Mission LiFE officially launched?

A. 15 August 2021
B. 20 October 2022
C. 1 January 2023
D. 26 January 2024

Correct Answer: Option (B)

Short Explanation:
Mission LiFE was officially launched on 20 October 2022 at the Statue of Unity, Gujarat.

Question 403

Where was Mission LiFE launched, and in whose presence?

A. Delhi, in the presence of the President of India
B. Statue of Unity, in the presence of the UN Secretary-General
C. Mumbai, in the presence of the RBI Governor
D. Chennai, in the presence of state governors only

Correct Answer: Option (B)

Short Explanation:
Mission LiFE was launched at the Statue of Unity, Gujarat, in the presence of UN Secretary-General António Guterres.

Question 404

What are the three pillars of Mission LiFE?

A. Consumer, Community Member, Practitioner
B. Farmer, Industrialist, Politician
C. Producer, Distributor, Retailer
D. Student, Teacher, Parent

Correct Answer: Option (A)

Short Explanation:
Mission LiFE organises individual action around three pillars: Individual as a Consumer, Community Member, and Practitioner.

Question 405

Approximately how much lower is India's per capita carbon footprint compared to the global average?

A. About 10% lower
B. About 30% lower
C. About 60% lower
D. About 90% lower

Correct Answer: Option (C)

Short Explanation:
India's per capita carbon footprint is about 60% lower than the global average, reflecting traditional resource-conscious lifestyle practices.

Question 406

Which everyday activity typically contributes most to an individual's personal carbon footprint in urban India?

A. Reading books
B. Private vehicle transportation and household energy use
C. Drinking water
D. Walking short distances

Correct Answer: Option (B)

Short Explanation:
Private vehicle transportation and household energy consumption are typically among the largest contributors to an individual's personal carbon footprint in urban settings.

Question 407

When was the Green Credit Programme launched?

A. October 2020
B. October 2023
C. January 2025
D. October 2026

Correct Answer: Option (B)

Short Explanation:
The Green Credit Programme was launched on 13 October 2023 as a market-based mechanism rewarding voluntary environmental actions.

Question 408

How many categories does the Green Credit Programme cover?

A. Three
B. Five
C. Eight
D. Twelve

Correct Answer: Option (C)

Short Explanation:
The Green Credit Programme covers eight categories, including tree plantation, water conservation, and sustainable agriculture.

Question 409

Which of the following best describes a 'green building'?

A. Any building painted green
B. A structure designed to minimise environmental impact through efficient design and sustainable materials
C. A building with no windows
D. A building used exclusively for agriculture

Correct Answer: Option (B)

Short Explanation:
Green buildings are designed to minimise environmental impact through energy-efficient design, sustainable materials, and resource-conscious operation.

Question 410

Which of the following are recognised green building certification systems?

A. GRIHA, IGBC, and LEED
B. ISO, GST, and PAN
C. IMD, CPCB, and NDMA
D. RBI, SEBI, and IRDAI

Correct Answer: Option (A)

Short Explanation:
GRIHA and IGBC are India's own green building rating systems, alongside the internationally recognised LEED certification.

Question 411

What is India's approximate global rank in LEED-certified green buildings?

A. 1st
B. 3rd
C. 10th
D. 25th

Correct Answer: Option (B)

Short Explanation:
India ranks third globally in LEED-certified green buildings, reflecting significant growth in sustainable construction.

Question 412

What is the 'circular economy' concept?

A. An economy based solely on agriculture
B. An economic model minimising waste by keeping resources in use through reuse, repair, and recycling
C. A form of currency exchange
D. A type of stock market cycle

Correct Answer: Option (B)

Short Explanation:
A circular economy minimises waste by keeping resources in continuous use through strategies like reuse, repair, and recycling.

Question 413

Which of the following best reflects 'responsible consumption'?

A. Buying as much as possible regardless of need
B. Being mindful of what and how much one consumes, considering environmental and social impact
C. Ignoring product packaging entirely
D. Avoiding all forms of consumption

Correct Answer: Option (B)

Short Explanation:
Responsible consumption involves being mindful of purchasing decisions and their broader environmental and social footprint.

Question 414

What does Mission LiFE mean by 'Pro-Planet People'?

A. A government department
B. Individuals committed to adopting and promoting environment-friendly lifestyles
C. A type of renewable energy technology
D. An international trade agreement

Correct Answer: Option (B)

Short Explanation:
'Pro-Planet People' is Mission LiFE's term for individuals actively committed to sustainable, environment-friendly lifestyle choices.

Question 415

Where was the concept of LiFE first introduced by India's Prime Minister?

A. At the United Nations General Assembly in New York
B. At COP26 in Glasgow, in 2021
C. At the G7 Summit
D. At the World Economic Forum in Davos

Correct Answer: Option (B)

Short Explanation:
The concept of LiFE (Lifestyle for Environment) was first introduced by India's Prime Minister at COP26 in Glasgow in 2021.

Question 416

Which of the following is an example of sustainable transportation?

A. Driving alone in a private vehicle for every trip
B. Choosing cycling, walking, or public transport where feasible
C. Avoiding all forms of transport
D. Idling vehicle engines unnecessarily

Correct Answer: Option (B)

Short Explanation:
Choosing cycling, walking, or public transport reduces individual carbon emissions compared to relying solely on private vehicles.

Question 417

What is a key theme India integrated Mission LiFE into during its 2023 G20 Presidency?

A. One Earth, One Family, One Future
B. Unity in Diversity
C. Digital India for All
D. Make in India

Correct Answer: Option (A)

Short Explanation:
India integrated Mission LiFE into its G20 Presidency under the theme 'One Earth, One Family, One Future', building international momentum for sustainable lifestyles.

Question 418

Which of the following best reflects a 'plastic-free lifestyle' choice?

A. Using single-use plastic bags regularly
B. Carrying reusable bags, bottles, and containers
C. Avoiding all forms of packaging awareness
D. Ignoring plastic alternatives entirely

Correct Answer: Option (B)

Short Explanation:
Carrying reusable bags, bottles, and containers directly reduces dependence on single-use plastic in daily life.

Question 419

What is a 'smart city' concept centred on?

A. Eliminating all urban development
B. Integrating technology and sustainable planning to improve efficiency and quality of life
C. Building only luxury housing
D. Avoiding any public transport investment

Correct Answer: Option (B)

Short Explanation:
Smart cities integrate technology and sustainable planning across transport, energy, and waste systems to improve efficiency and liveability.

Question 420

Which ministry leads Mission LiFE and the Green Credit Programme in India?

A. Ministry of Finance

B. Ministry of Environment, Forest and Climate Change (MoEFCC)

C. Ministry of Defence

D. Ministry of External Affairs

Correct Answer: Option (B)

Short Explanation:

MoEFCC leads Mission LiFE and the Green Credit Programme, coordinating India's sustainable lifestyle policy.

Question 421

Why does Mission LiFE frame sustainability as a 'return to tradition' rather than a new concept for India?

A. Indian tradition has no relevant sustainable practices

B. Traditional Indian practices of moderation and resource-consciousness align closely with modern sustainability principles

C. Mission LiFE rejects all traditional practices

D. Sustainability has no historical roots anywhere

Correct Answer: Option (B)

Short Explanation:

Mission LiFE deliberately draws on traditional Indian values of conservation and moderation already embedded in cultural practice, rather than treating sustainability as entirely new.

Question 422

Which of the following best reflects sustainable shopping behaviour?

A. Buying only what is needed and favouring durable, repairable goods

B. Frequently discarding items to buy new versions

C. Ignoring product packaging and origin entirely

D. Prioritising the lowest price regardless of durability

Correct Answer: Option (A)

Short Explanation:

Buying only what is needed and choosing durable, repairable goods reflects mindful, sustainable shopping behaviour.

Question 423

What is the primary purpose of the Green Credit Programme's market-based structure?

A. To penalise all environmental activity

B. To reward individuals, industries, and institutions for voluntary environmental actions

C. To eliminate environmental regulation entirely

D. To restrict tree plantation activities

Correct Answer: Option (B)

Short Explanation:

The Green Credit Programme uses a market-based mechanism to reward voluntary environmental actions across defined categories.

Question 424

Which of the following government programmes offers incentives supporting certified-green housing development?

A. Pradhan Mantri Awas Yojana (PMAY)
B. Namami Gange
C. Atal Bhujal Yojana
D. Jal Jeevan Mission

Correct Answer: Option (A)

Short Explanation:
PMAY offers incentives, including tax benefits and low-interest loans, that support the development of sustainable, certified-green housing.

Question 425

What best describes 'Individual as a Practitioner' under Mission LiFE's three pillars?

A. Avoiding any professional sustainability effort
B. Applying sustainable practices within one's own profession or workplace
C. A pillar unrelated to individual action
D. A pillar focused only on government employees

Correct Answer: Option (B)

Short Explanation:
This pillar encourages individuals to apply sustainable practices specifically within their own professional context or workplace.

Question 426

Why might a household choose refill options for cleaning and personal care products?

A. Refill options have no environmental benefit
B. Refills reduce single-use packaging waste compared to buying new containers each time
C. Refill options are always more expensive with no benefit
D. Refills increase overall plastic consumption

Correct Answer: Option (B)

Short Explanation:
Choosing refill options reduces the generation of new single-use packaging waste compared to repeatedly purchasing new containers.

Question 427

Which of the following best reflects why reducing food waste is emphasised in sustainable living guidance?

A. Food waste has no environmental impact
B. Food waste contributes to unnecessary resource consumption and landfill methane emissions
C. Reducing food waste has no connection to sustainability
D. Food waste is unavoidable and cannot be reduced

Correct Answer: Option (B)

Short Explanation:
Reducing food waste addresses both the resources consumed in producing wasted food and the methane emissions generated when it decomposes in landfills.

Question 428

What is one practical way an office can reduce its environmental footprint, according to sustainable living principles?

A. Avoiding all discussion of sustainability
B. Setting up refill or reuse stations for common supplies
C. Increasing single-use plastic procurement
D. Ignoring energy-efficient equipment options

Correct Answer: Option (B)

Short Explanation:
Setting up refill or reuse stations for common office supplies is a practical step toward reducing an office's overall waste generation.

Question 429

Which of the following best illustrates a household reducing its carbon footprint through diet?

A. Increasing consumption of heavily processed, imported foods
B. Incorporating more plant-based meals and reducing food waste
C. Ignoring the environmental impact of food choices entirely
D. Avoiding any dietary consideration of sustainability

Correct Answer: Option (B)

Short Explanation:
Incorporating more plant-based meals and reducing food waste are recognised ways to lower a household's dietary carbon footprint.

Question 430

Why is 'Individual as a Community Member' considered a distinct pillar from 'Individual as a Consumer' in Mission LiFE?

A. The two pillars are identical in scope
B. It emphasises collective, local-level sustainable action beyond individual purchasing decisions
C. Community action has no relevance to sustainability
D. Only consumer behaviour matters for sustainability

Correct Answer: Option (B)

Short Explanation:
This pillar extends sustainability beyond individual purchases to encompass collective, community-level action and advocacy.

Question 431

What is the environmental rationale behind choosing loose produce over pre-packaged plastic-wrapped items?

A. Loose produce has no environmental advantage

B. It reduces unnecessary single-use plastic packaging waste

C. Pre-packaged items are always more sustainable

D. Loose produce increases plastic waste

Correct Answer: Option (B)

Short Explanation:

Choosing loose produce avoids unnecessary plastic packaging, directly reducing a household's contribution to plastic waste.

Question 432

Which of the following best reflects why India positioned Mission LiFE within its G20 agenda?

A. G20 has no relevance to environmental policy

B. To build international momentum and consensus around sustainable lifestyle-driven climate action

C. G20 exclusively addresses trade issues

D. Mission LiFE has no international dimension

Correct Answer: Option (B)

Short Explanation:

Integrating Mission LiFE into the G20 agenda helped build broader international momentum for lifestyle-driven approaches to climate action.

Question 433

What is a key benefit of choosing durable, repairable goods over disposable ones?

A. Durable goods always cost more with no offsetting benefit

B. They reduce the frequency of replacement, lowering overall resource consumption and waste generation over time

C. Disposable goods are always more sustainable

D. Durability has no bearing on sustainability

Correct Answer: Option (B)

Short Explanation:

Durable, repairable goods reduce how often items need replacing, lowering cumulative resource consumption and waste over their lifetime.

Question 434

Which of the following best reflects the concept of a 'water footprint'?

A. A physical footprint left near a water body

B. The total volume of freshwater used, directly and indirectly, by a person, product, or activity

C. A type of water pollution measurement only

D. A government water tax

Correct Answer: Option (B)

Short Explanation:

A water footprint measures total freshwater use, both direct and indirect (such as water used to produce goods), by a person, product, or activity.

Question 435

What role can schools play in promoting Mission LiFE principles among students?

A. Avoiding the topic of sustainability entirely

B. Running awareness sessions and encouraging practical sustainable habits like waste segregation

C. Discouraging any environmental discussion

D. Focusing exclusively on unrelated topics

Correct Answer: Option (B)

Short Explanation:

Schools can reinforce Mission LiFE principles through awareness sessions and practical activities that build sustainable habits among students.

Question 436

Why is sustainable living considered achievable at any income level, according to Mission LiFE's framing?

A. Sustainable living always requires significant financial investment

B. Many sustainable habits, like reducing waste and mindful consumption, are behavioural rather than purely cost-dependent

C. Only wealthy individuals can adopt sustainable habits

D. Sustainability is entirely dependent on expensive purchases

Correct Answer: Option (B)

Short Explanation:

Mission LiFE emphasises that many sustainable practices are behavioural choices — like reducing waste — achievable regardless of income level.

Question 437

Which of the following best reflects a green credit-eligible action under the programme's categories?

A. Increasing industrial emissions

B. Tree plantation and water conservation activities

C. Ignoring waste management practices

D. Avoiding any sustainable agriculture practices

Correct Answer: Option (B)

Short Explanation:

Tree plantation and water conservation are among the eight recognised categories eligible for green credits under the programme.

Question 438

What is one reason green buildings often reduce long-term operating costs despite potentially higher upfront costs?

A. Green buildings never reduce costs
B. Energy and water efficiency measures reduce ongoing utility expenses over the building's lifetime
C. Green buildings always cost the same to operate as conventional buildings
D. Certification has no bearing on operating costs

Correct Answer: Option (B)

Short Explanation:
Energy and water-efficient design in green buildings typically reduces ongoing utility costs, offsetting higher upfront investment over time.

Question 439

Which of the following best describes why individual lifestyle change is considered a 'complementary', not standalone, climate strategy under Mission LiFE?

A. Individual action alone is sufficient without any policy support
B. It works alongside policy and industrial action, not as a replacement for either
C. Mission LiFE rejects the need for any policy action
D. Individual behaviour has no connection to broader climate strategy

Correct Answer: Option (B)

Short Explanation:
Mission LiFE positions individual behavioural change as a complementary pillar alongside policy and technological climate solutions, not a substitute for either.

Question 440

What is an appropriate first step for someone wanting to begin a more sustainable lifestyle without feeling overwhelmed?

A. Attempting to change every habit simultaneously
B. Starting with one or two manageable habits, such as carrying reusable bags
C. Waiting until all habits can be changed at once
D. Avoiding any lifestyle change entirely

Correct Answer: Option (B)

Short Explanation:
Starting with a few manageable, specific habits is a practical and sustainable approach to building a greener lifestyle over time.

Question 441

Which of the following best supports the claim that India's traditional practices already embody sustainability principles?

A. Indian tradition has always encouraged excessive consumption

B. Practices like reusing containers, minimising waste, and communal sharing have long been part of everyday Indian life

C. Traditional practices have no connection to modern sustainability

D. Sustainability is entirely a Western import with no traditional roots

Correct Answer: Option (B)

Short Explanation:

Long-standing practices such as reusing items and minimising waste reflect resource-conscious values already embedded in traditional Indian life.

Question 442

What is the primary distinction between 'reduce' and 'responsible consumption' as sustainability concepts?

A. They are identical concepts

B. 'Reduce' focuses on lowering quantity consumed, while 'responsible consumption' also considers the broader impact and mindfulness of each purchase

C. Responsible consumption ignores quantity entirely

D. Reduce has no connection to consumption behaviour

Correct Answer: Option (B)

Short Explanation:

While 'reduce' emphasises lowering the amount consumed, 'responsible consumption' more broadly considers the mindfulness and impact behind each purchasing decision.

Question 443

Which of the following actions reflects a community-level sustainable living initiative?

A. A household composting alone with no community involvement

B. A neighbourhood organising a plastic-free market or vendor initiative

C. Avoiding any collective sustainability effort

D. Discouraging community participation in green initiatives

Correct Answer: Option (B)

Short Explanation:

Organising a plastic-free market or similar initiative reflects sustainable living applied at the community, rather than purely individual, level.

Question 444

Why does Mission LiFE emphasise measurable, specific actions rather than abstract environmental goals?

A. Abstract goals are always more effective

B. Specific, repeatable actions are easier for individuals to adopt and sustain than vague aspirations

C. Mission LiFE avoids providing any concrete guidance

D. Specific actions have no advantage over abstract goals

Correct Answer: Option (B)

Short Explanation:

Concrete, specific actions are more actionable and sustainable for individuals to adopt consistently compared to vague, abstract environmental aspirations.

Question 445

What is a reasonable way for a family to begin reducing their collective carbon footprint?

A. Ignoring the concept of carbon footprint entirely

B. Using an online carbon footprint calculator to identify and target their largest contributing categories

C. Assuming carbon footprint reduction requires no assessment

D. Avoiding any measurement or tracking of household habits

Correct Answer: Option (B)

Short Explanation:

Using a carbon footprint calculator helps a family identify their largest impact areas, enabling targeted, effective reduction efforts.

Question 446

Which of the following best reflects why India's lower per capita carbon footprint should not lead to complacency in sustainability efforts?

A. A lower footprint means no further action is needed

B. Rising incomes, urbanisation, and changing consumption patterns are steadily pushing India's per capita footprint upward

C. India's footprint can never increase from its current level

D. Sustainability efforts are irrelevant once a footprint is below average

Correct Answer: Option (B)

Short Explanation:

Despite a currently lower footprint, rising incomes and changing consumption patterns are pushing India's per capita emissions upward, making continued effort important.

Question 447

What is the most effective way for an individual to encourage sustainable habits among family or peers?

A. Criticising others harshly for unsustainable habits

B. Modelling consistent sustainable behaviour and sharing practical, specific tips

C. Avoiding any discussion of sustainability with others

D. Assuming others will adopt habits without any encouragement

Correct Answer: Option (B)

Short Explanation:

Modelling consistent sustainable behaviour and offering practical tips is a more effective way to encourage adoption among family and peers than criticism alone.

Question 448

Which of the following best reflects the long-term vision behind India's Smart Cities Mission, in relation to sustainable living?

A. Building cities with no regard for environmental impact

B. Integrating efficient transport, smart grids, and green infrastructure to improve sustainability and quality of life together

C. Focusing exclusively on luxury real estate development

D. Avoiding any technology integration in urban planning

Correct Answer: Option (B)

Short Explanation:

The Smart Cities Mission envisions integrating technology and sustainable infrastructure to jointly improve environmental outcomes and urban quality of life.

Question 449

Why might a company seek IGBC or GRIHA certification for a new office building despite additional upfront requirements?

A. Certification provides no tangible benefit

B. It demonstrates measurable environmental performance, potentially reducing long-term costs and supporting sustainability goals

C. Certification is purely symbolic with no practical use

D. These certifications are not relevant to commercial buildings

Correct Answer: Option (B)

Short Explanation:

Certification demonstrates measurable environmental performance and can reduce long-term operating costs, aligning with broader corporate sustainability goals.

Question 450

Which of the following best summarises the core message of Mission LiFE for an individual citizen?

A. Environmental responsibility belongs only to governments and industries

B. Everyday, mindful lifestyle choices are a meaningful and necessary part of the global climate response

C. Individual actions have no measurable effect on climate outcomes

D. Sustainability is only relevant to environmental professionals

Correct Answer: Option (B)

Short Explanation:

Mission LiFE's core message is that everyday, mindful individual choices form a meaningful and necessary complement to broader climate action.

Question 451

A citizen wants to build one new environmental habit per week rather than changing everything at once. What principle does this reflect?

A. Habits form best when adopted all at once

B. Gradual, sustained habit-building is more effective and durable than attempting everything simultaneously

C. Weekly habit changes have no proven benefit

D. Habits should never be planned in advance

Correct Answer: Option (B)

Short Explanation:

Gradual, structured habit-building is more likely to result in lasting behaviour change than attempting to adopt every habit simultaneously.

Question 452

Which of the following belongs on a 'Daily Environmental Checklist' rather than a less frequent checklist?

A. Checking the AQI before outdoor activity

B. Installing a rainwater harvesting system

C. Applying for a green building certification

D. Conducting a household energy audit

Correct Answer: Option (A)

Short Explanation:

Checking the daily AQI is a quick, everyday action suited to a daily checklist, unlike larger one-time projects like harvesting system installation.

Question 453

A household has started segregating waste but still occasionally forgets to turn off lights when leaving a room. What is the most appropriate next step?

A. Abandon the segregation habit since perfection wasn't achieved

B. Continue the segregation habit and add a reminder system to build the lighting habit gradually

C. Give up on all environmental habits entirely

D. Wait indefinitely without taking further action

Correct Answer: Option (B)

Short Explanation:

Building on an established habit while introducing supportive reminders for the next one reflects a practical, sustainable approach to habit formation.

Question 454

Why does a 'Final Responsible Citizen Checklist' recommend periodic review rather than a single one-time completion?

A. Habits never need reinforcement once formed

B. Periodic review helps sustain habits that can otherwise quietly lapse over time

C. One-time review is always sufficient

D. Reviewing checklists has no practical benefit

Correct Answer: Option (B)

Short Explanation:

Periodic review helps identify and reinforce habits that may have lapsed, supporting long-term consistency rather than a false sense of permanent completion.

Question 455

A family wants to reduce their environmental impact but has a limited budget. Which strategy aligns best with sustainable living principles covered across this category?

A. Assuming sustainability requires significant financial investment

B. Focusing on low-cost behavioural changes like reducing waste, conserving water, and mindful consumption

C. Avoiding any environmental effort due to budget constraints

D. Waiting until finances improve before taking any action

Correct Answer: Option (B)

Short Explanation:

Many effective sustainability habits are behavioural rather than costly, making them accessible regardless of a household's financial situation.

Question 456

Which combination of checklist themes would most directly reduce both a household's water bill and its water footprint?

A. Water Conservation and Home Sustainability checklists

B. Community Participation and Civic Etiquette only

C. Wildlife Conservation checklist alone

D. Air Quality checklist alone

Correct Answer: Option (A)

Short Explanation:

Combining water conservation habits with broader home sustainability practices most directly addresses both cost savings and reduced water footprint.

Question 457

A citizen wants to report a civic issue but does not know which authority to contact. What is the most appropriate first step?

A. Ignore the issue entirely

B. Identify the relevant local authority (municipal, pollution control board, or forest department) based on the issue type

C. Assume no authority is responsible for any civic issue

D. Wait for someone else to identify the right authority

Correct Answer: Option (B)

Short Explanation:

Identifying the correct relevant authority based on the specific issue ensures the report reaches the body best positioned to act on it.

Question 458

Which of the following best reflects the connection between the 'Pollution Prevention Checklist' and the 'Green Lifestyle Checklist'?

A. The two checklists are entirely unrelated

B. Reducing vehicle emissions (pollution prevention) and choosing sustainable transport (green lifestyle) reinforce each other

C. Only one of these checklists has any practical value

D. These checklists address completely separate environmental concerns with no overlap

Correct Answer: Option (B)

Short Explanation:

Sustainable transport choices simultaneously prevent pollution and reflect broader green lifestyle habits, showing how the checklists reinforce one another.

Question 459

A community wants to build collective environmental habits. Which approach reflects best practice from the 'Community Participation Checklist'?

A. Relying solely on individual household action with no coordination
B. Organising collective clean-up drives and encouraging neighbours to adopt shared green habits
C. Avoiding any group-based environmental initiatives
D. Assuming community involvement has no additional benefit beyond individual action

Correct Answer: Option (B)

Short Explanation:
Organised community initiatives amplify individual efforts and build shared accountability, reflecting the value of collective, coordinated civic action.

Question 460

Which of the following best reflects why sharing a single, focused checklist is often more effective than sharing an entire handbook when encouraging others?

A. Focused checklists are always less informative
B. A shorter, specific list is easier for others to understand and adopt than a comprehensive document
C. Comprehensive handbooks are always more persuasive
D. There is no difference in effectiveness between the two approaches

Correct Answer: Option (B)

Short Explanation:
A focused, specific checklist is more approachable and actionable for someone new to sustainable habits than an extensive comprehensive handbook.

Question 461

A household has successfully adopted waste segregation, water conservation, and energy-saving habits. What should their next area of focus likely be, based on the ten-checklist structure?

A. Abandoning all previous habits
B. Green lifestyle and community participation habits to broaden their impact beyond the household
C. Repeating only the same three habits indefinitely
D. Assuming no further progress is possible

Correct Answer: Option (B)

Short Explanation:
After establishing core household habits, expanding into green lifestyle and community-level participation broadens overall environmental impact.

Question 462

Why is it inaccurate to think that completing this category's ten modules means an individual's environmental learning is 'finished'?

A. Learning is complete once all modules are read

B. Environmental habits require ongoing practice and periodic review to remain effective, not a one-time completion

C. Modules have no ongoing relevance after being read once

D. There is nothing more to learn about the environment

Correct Answer: Option (B)

Short Explanation:

Sustained environmental responsibility depends on ongoing habit practice and review, not simply completing a one-time reading of educational content.

Question 463

A citizen has mastered the 'Daily Environmental Checklist' but struggles with the 'Home Sustainability Checklist'. What is the most constructive approach?

A. Abandon all further effort

B. Focus specifically on the Home Sustainability Checklist as a dedicated area of improvement

C. Assume mastery of one checklist means all others are automatically achieved

D. Ignore the challenge entirely

Correct Answer: Option (B)

Short Explanation:

Focusing dedicated attention on the specific checklist area that needs improvement reflects a targeted, practical approach to habit-building.

Question 464

Which of the following best reflects why 'Common Environmental Mistakes to Avoid' is a useful standalone reference?

A. It has no practical use compared to the other checklists

B. It offers a quick self-check against common pitfalls, useful for periodic review even after habits are established

C. Mistakes are irrelevant once initial habits are formed

D. This checklist duplicates all the other checklists exactly

Correct Answer: Option (B)

Short Explanation:

A quick-reference list of common mistakes helps individuals periodically self-check against pitfalls, even after other habits are established.

Question 465

A school wants to introduce sustainability checklists to students in an age-appropriate way. What is the most effective initial approach?

A. Presenting all ten checklists simultaneously in full detail

B. Starting with the simplest, most relatable checklist, like Daily Environmental habits, before introducing others

C. Avoiding checklists entirely in educational settings

D. Assuming children cannot engage with sustainability concepts

Correct Answer: Option (B)

Short Explanation:

Starting with the simplest, most relatable checklist helps build foundational engagement before introducing more complex themes to younger learners.

Question 466

Which of the following best illustrates applying the 'Reduce, Reuse, Recycle' principle within a broader daily checklist context?

A. Recycling being the very first action taken each day

B. Reducing consumption first, reusing where possible, and only then recycling remaining waste

C. Ignoring the order of these three principles entirely

D. Recycling and reducing being treated as identical actions

Correct Answer: Option (B)

Short Explanation:

Applying the hierarchy correctly means prioritising reduction and reuse before recycling, consistent with the broader waste management principles covered earlier in this category.

Question 467

A citizen notices their electricity and water bills have both decreased after adopting checklist habits. What does this most likely reflect?

A. A coincidental, unrelated change

B. The combined effect of consistent energy and water conservation habits from the respective checklists

C. Checklists have no measurable financial impact

D. Bills naturally decrease regardless of behaviour

Correct Answer: Option (B)

Short Explanation:

Consistent application of energy and water conservation habits from their respective checklists directly contributes to reduced utility costs.

Question 468

Why might a family choose to assign different checklist themes to different family members?

A. This approach has no practical benefit

B. Distributing focus areas makes the overall effort more manageable and encourages shared responsibility

C. Only one family member should ever be responsible for sustainability

D. Checklists cannot be divided among individuals

Correct Answer: Option (B)

Short Explanation:

Assigning different themes across family members distributes effort, builds shared ownership, and makes the overall goal more manageable.

Question 469

Which of the following best reflects the connection between Mission LiFE and the structure of this consolidated checklist module?

A. The two have no conceptual relationship

B. Both apply the same underlying principle of breaking large environmental goals into specific, repeatable individual actions

C. Mission LiFE rejects the use of checklists entirely

D. This module contradicts Mission LiFE's approach

Correct Answer: Option (B)

Short Explanation:

Both Mission LiFE and this checklist module apply the same principle: converting broad environmental goals into specific, repeatable, manageable actions.

Question 470

A citizen wants to track long-term progress across all ten checklist themes. What is the most appropriate method?

A. Reviewing the Final Responsible Citizen Checklist every few months

B. Reviewing checklists only once, immediately after learning about them

C. Avoiding any structured tracking method

D. Assuming progress does not need to be tracked

Correct Answer: Option (A)

Short Explanation:

Periodically revisiting the Final Responsible Citizen Checklist provides a structured way to track long-term progress across all ten themes.

Question 471

Which of the following best reflects why 'small, consistent habits' are emphasised over 'occasional large efforts' throughout this category?

A. Large efforts are always more effective than small habits
B. Consistent daily habits compound over time and are more sustainable than sporadic large actions
C. Small habits have no cumulative effect
D. Occasional large efforts require no behavioural change

Correct Answer: Option (B)

Short Explanation:
Small, consistent habits compound over time into meaningful impact and are generally more sustainable than infrequent, large one-off efforts.

Question 472

A citizen wants to reduce single-use plastic, conserve water, and participate in community clean-ups. Which set of checklists should they primarily reference?

A. Green Lifestyle, Water Conservation, and Community Participation checklists
B. Only the Wildlife Conservation checklist
C. Only the Civic Responsibility checklist
D. None of the checklists address these combined goals

Correct Answer: Option (A)

Short Explanation:
These three specific goals correspond directly to the Green Lifestyle, Water Conservation, and Community Participation checklist themes.

Question 473

Why does this category recommend keeping a checklist copy 'accessible at home or saved on your phone'?

A. Accessibility has no bearing on habit formation
B. Easy access supports consistent daily reference and reinforcement of habits
C. Checklists are only useful when memorised perfectly
D. Physical or digital access is irrelevant to habit-building

Correct Answer: Option (B)

Short Explanation:
Keeping checklists easily accessible supports consistent daily reference, reinforcing habits until they become automatic.

Question 474

Which of the following best reflects a 'application-based' understanding of the waste hierarchy within a checklist context?

A. Reciting the definition of Reduce, Reuse, Recycle without applying it

B. Actively choosing a reusable container over a disposable one during grocery shopping

C. Ignoring the hierarchy in daily decisions

D. Assuming the hierarchy only applies to industries

Correct Answer: Option (B)

Short Explanation:

Actively applying the hierarchy in a real decision, like choosing reusable over disposable packaging, reflects genuine practical application rather than rote recall.

Question 475

A citizen has been consistent with all ten checklists for six months. What would be the most appropriate next step in their environmental journey?

A. Assume no further growth is possible

B. Deepen their impact through mentoring others or engaging in more advanced community or policy-level participation

C. Abandon all established habits

D. Repeat only the easiest checklist indefinitely

Correct Answer: Option (B)

Short Explanation:

After establishing consistent habits, deepening impact through mentoring others or broader civic engagement reflects meaningful continued growth.

Question 476

Which of the following best explains why the 'Home Sustainability Checklist' includes both energy-efficient appliances and indoor plants?

A. These items have no thematic connection

B. Both contribute to a more resource-efficient, healthier home environment, reflecting the checklist's broader sustainability focus

C. Indoor plants have no connection to sustainability

D. Energy-efficient appliances are unrelated to home sustainability

Correct Answer: Option (B)

Short Explanation:

Both energy-efficient appliances and indoor plants contribute to a more resource-efficient and healthier home environment, aligning with the checklist's broader theme.

Question 477

A citizen wants to influence civic behaviour beyond their own household. Which checklist theme is most directly relevant?

A. Daily Environmental Checklist only

B. Community Participation Checklist

C. Home Sustainability Checklist only

D. None of the checklists address influence beyond the household

Correct Answer: Option (B)

Short Explanation:

The Community Participation Checklist specifically addresses extending environmental and civic influence beyond the individual household.

Question 478

Which best reflects why this category treats 'reporting environmental violations' as a recurring theme across multiple modules?

A. Reporting violations is irrelevant to environmental protection

B. Citizen reporting is a consistently important mechanism for enforcement across waste, water, air, and wildlife issues

C. Reporting only matters for wildlife-related issues

D. Violations should never be reported by individual citizens

Correct Answer: Option (B)

Short Explanation:

Citizen reporting plays a consistently important enforcement role across multiple domains — waste, water, air quality, and wildlife protection — explaining its recurring emphasis.

Question 479

A citizen wants to begin reducing their carbon footprint but is unsure where to start. Which approach best reflects the guidance from this category?

A. Attempting an extensive lifestyle overhaul immediately

B. Using a carbon footprint calculator to identify their largest impact category, then targeting it specifically

C. Ignoring carbon footprint entirely as too complex

D. Assuming carbon footprint has no relevance to individual action

Correct Answer: Option (B)

Short Explanation:

Using a calculator to identify the largest impact area allows for targeted, manageable first steps rather than an overwhelming full lifestyle change.

Question 480

Which of the following best reflects the relationship between individual checklists and India's broader national environmental policy, as covered across this category?

A. Individual checklists have no connection to national policy

B. Individual actions complement broader national missions and policies, such as Mission LiFE, NCAP, and Jal Jeevan Mission

C. National policy makes individual checklists unnecessary

D. Checklists exist independently of any national context

Correct Answer: Option (B)

Short Explanation:

Individual-level checklists complement and reinforce broader national environmental missions and policies covered throughout this category.

Question 481

A citizen has adopted strong waste segregation habits but wants to extend their impact to their apartment building. What is the most appropriate next step?

A. Keep the habit entirely private

B. Advocate for building-wide segregated collection through their Resident Welfare Association

C. Assume individual habits cannot scale to a building level

D. Discourage others from adopting similar habits

Correct Answer: Option (B)

Short Explanation:

Advocating through the RWA is a practical way to extend an individual's waste segregation habit into a building-wide, more impactful practice.

Question 482

Which of the following best reflects why 'checklists work by converting broad intentions into specific, repeatable actions'?

A. Broad intentions are always sufficient for behaviour change

B. Specific, concrete steps are easier to consistently execute than vague, abstract goals

C. Checklists have no advantage over general intentions

D. Repeatable actions have no bearing on long-term habit formation

Correct Answer: Option (B)

Short Explanation:

Specific, concrete steps are more consistently executable than vague intentions, which is why checklists are effective tools for habit formation.

Question 483

A family wants to celebrate progress without expecting perfection. Which mindset best reflects the guidance in this category?

A. Expecting flawless adherence to every checklist item immediately

B. Recognising and celebrating small, consistent wins rather than demanding perfection

C. Abandoning effort if perfection is not achieved

D. Assuming partial progress has no value

Correct Answer: Option (B)

Short Explanation:

Celebrating small, consistent progress rather than demanding immediate perfection supports sustained motivation and long-term habit formation.

Question 484

Which of the following best reflects why this category emphasises returning to earlier modules for 'context' when a habit feels unclear?

A. Earlier modules have no bearing on checklist items

B. Understanding the underlying reasoning and statistics behind a habit can reinforce motivation and correct application

C. Context has no impact on habit sustainability

D. Checklists are meant to be used without any supporting knowledge

Correct Answer: Option (B)

Short Explanation:

Understanding the reasoning and evidence behind a habit, as covered in earlier modules, can reinforce motivation and help ensure the habit is applied correctly.

Question 485

A citizen wants to reduce their household's environmental impact holistically. Which combination best reflects a comprehensive approach across this category?

A. Focusing on only one checklist indefinitely

B. Integrating habits from waste, water, energy, pollution prevention, and green lifestyle checklists together

C. Assuming a single habit change is sufficient for holistic impact

D. Avoiding integration across different checklist themes

Correct Answer: Option (B)

Short Explanation:

A holistic approach integrates habits across multiple checklist themes — waste, water, energy, pollution, and lifestyle — rather than relying on a single isolated change.

Question 486

Which of the following best reflects the purpose of including 'Common Environmental Mistakes to Avoid' alongside positive-action checklists?

A. Mistakes have no educational value

B. Highlighting common pitfalls helps reinforce correct habits and prevent regression into counterproductive behaviours

C. This checklist duplicates positive-action checklists exactly

D. Avoiding mistakes has no connection to building good habits

Correct Answer: Option (B)

Short Explanation:

Highlighting common mistakes complements positive-action checklists by helping individuals recognise and avoid counterproductive behaviours that could undermine their progress.

Question 487

A citizen wants to model responsible environmental behaviour for their children. Which approach is most effective, based on this category's guidance?

A. Explaining sustainability only in theoretical terms

B. Demonstrating consistent practical habits, like segregation and conservation, in daily household routines

C. Avoiding any environmental discussion with children

D. Assuming children cannot learn from observed behaviour

Correct Answer: Option (B)

Short Explanation:

Demonstrating consistent practical habits in daily routines is a more effective way to model responsible behaviour for children than theoretical discussion alone.

Question 488

Which of the following best explains why this category's final module avoids introducing significant new factual content?

A. New content would be too difficult to include

B. Its purpose is to consolidate and operationalise the knowledge and statistics already covered across the previous nine modules

C. The previous modules contained no useful content to consolidate

D. Consolidation modules serve no practical purpose

Correct Answer: Option (B)

Short Explanation:

The final module's purpose is to convert previously covered knowledge into a practical, actionable reference rather than introducing new factual content.

Question 489

A citizen wants to assess whether their environmental habits are genuinely sustained over time, not just recently adopted. What is the most appropriate method?

A. Assuming initial adoption guarantees permanence

B. Periodically reviewing the Final Responsible Citizen Checklist to confirm habits remain consistent

C. Avoiding any follow-up assessment

D. Assuming habits never need reassessment once started

Correct Answer: Option (B)

Short Explanation:

Periodic review against the Final Checklist helps confirm whether habits have genuinely become sustained practice rather than a temporary initial effort.

Question 490

Which of the following best reflects the value of pairing a new habit with an existing routine, as recommended in this category?

A. New habits are best formed with no connection to existing routines

B. Anchoring a new habit to an existing routine, like checking AQI while making morning tea, improves consistency

C. Existing routines have no bearing on new habit formation

D. Pairing habits with routines has no practical benefit

Correct Answer: Option (B)

Short Explanation:

Anchoring new habits to existing routines leverages established behaviour patterns, improving the consistency and likelihood of successful habit formation.

Question 491

A community wants to run a themed 'checklist of the month' campaign. What is the primary benefit of this approach?

A. It has no advantage over presenting all checklists at once

B. Focusing collective attention on one theme at a time makes adoption more manageable and measurable

C. Themed campaigns discourage community engagement

D. This approach contradicts effective habit-building principles

Correct Answer: Option (B)

Short Explanation:

Focusing on one themed checklist at a time makes collective adoption more manageable and allows progress to be more clearly measured.

Question 492

Which of the following best reflects why this category positions 'individual, household, community, and policy' as levels that work simultaneously, not separately?

A. Only one level of action ever matters at a time

B. Environmental responsibility functions more effectively when individual habits, household systems, community action, and policy reinforce each other

C. These levels operate in complete isolation with no interaction

D. Policy action makes individual or community effort unnecessary

Correct Answer: Option (B)

Short Explanation:

Environmental outcomes improve when individual, household, community, and policy-level actions reinforce one another, rather than functioning as isolated, separate efforts.

Question 493

A citizen has just completed all ten modules in this category. What is the most appropriate immediate next action, according to this module's guidance?

A. Consider their environmental learning journey complete and take no further action

B. Begin applying the Daily Environmental Checklist as an ongoing practice, not a one-time exercise

C. Discard the checklists as no longer relevant

D. Wait indefinitely before applying any of the learned habits

Correct Answer: Option (B)

Short Explanation:

The appropriate next step is to begin actively and consistently applying the checklists as an ongoing practice, not to treat the learning as finished.

Question 494

Which of the following best reflects why 'checklist of the month' or similar structured approaches are more effective for schools and communities than open-ended encouragement alone?

A. Structured approaches have no advantage over general encouragement

B. Structure and specific focus areas make progress easier to track, sustain, and reinforce collectively

C. Open-ended encouragement is always more effective

D. Structured campaigns discourage genuine engagement

Correct Answer: Option (B)

Short Explanation:

Structured, focused campaigns make it easier for groups to track, sustain, and collectively reinforce progress compared to vague, general encouragement.

Question 495

A citizen wants to ensure their environmental habits remain relevant as household circumstances change (e.g., moving to a new home). What is the most appropriate approach?

A. Assume habits automatically transfer without any need for reassessment

B. Reassess and adapt their checklist priorities to fit the new context, such as checking for rainwater harvesting feasibility

C. Abandon all previous habits when circumstances change

D. Assume checklists only apply to one's original home

Correct Answer: Option (B)

Short Explanation:

Reassessing and adapting checklist priorities to a new context ensures habits remain relevant and practical as circumstances change.

Question 496

Which of the following best summarises the core purpose of this consolidated module within the broader Environment & Civic Responsibility category?

A. To introduce entirely new environmental concepts unrelated to prior modules

B. To convert the knowledge gained across the category into a practical, ongoing reference for consistent action

C. To replace the need for any of the previous nine modules

D. To serve as a final examination with no practical application

Correct Answer: Option (B)

Short Explanation:

This module's core purpose is to consolidate prior learning into a practical, actionable reference that supports consistent, ongoing environmental behaviour.

Question 497

A citizen wants to double-check they are not overlooking any major theme before considering their green habits comprehensive. Which resource should they consult?

A. Only the Daily Environmental Checklist

B. The complete set of ten themed checklists covered in this module

C. A single, unrelated external source

D. No resource is necessary for this kind of review

Correct Answer: Option (B)

Short Explanation:

Reviewing the complete set of ten themed checklists ensures no major sustainability theme from across the category has been overlooked.

Question 498

Which of the following best reflects why this module encourages using checklists as 'posters or handouts' in schools and communities?

A. Visual, accessible formats have no impact on adoption

B. Visible, easy-to-reference formats reinforce daily awareness and consistent habit practice in shared spaces

C. Posters and handouts are purely decorative with no functional purpose

D. Only digital formats are effective for habit reinforcement

Correct Answer: Option (B)

Short Explanation:

Visible, accessible formats like posters reinforce daily awareness and make consistent habit practice easier in shared community or school spaces.

Question 499

What is the ultimate measure of success for this category's ten-module educational journey, according to its own stated goals?

A. The number of modules read

B. How much knowledge becomes consistent, everyday practice rather than remaining theoretical

C. Passing a final examination with no practical application

D. Memorising every statistic without applying any of them

Correct Answer: Option (B)

Short Explanation:

The stated goal of this category is for knowledge to translate into consistent daily habits, not simply to be read or memorised without application.

Question 500

Which of the following best reflects a citizen successfully integrating this entire category's lessons into a single, ordinary weekday?

A. Reciting facts about biodiversity with no accompanying action

B. Checking the AQI, segregating waste, conserving water, and choosing public transport, all within one day

C. Reading one module and taking no further action that day

D. Avoiding any environmental consideration during a typical weekday

Correct Answer: Option (B)

Short Explanation:

Combining multiple small, practical actions — checking AQI, segregating waste, conserving water, choosing sustainable transport — within a single day reflects genuine, integrated application of this category's lessons.
