JanGyan — Learn Without Limits

CITIZEN AWARENESS PLATFORM

Complete MCQ Practice Handbook

Category: Road Safety & Public Safety

500 carefully crafted multiple-choice questions covering every concept from this entire Road Safety & Public Safety series — with clear explanations, for confident, well-tested learning.

> *"A question you can answer confidently is knowledge you can actually rely on when it matters."*

Question 1

What is the primary goal of road safety as a discipline?

A. Increasing traffic speed

B. Reducing the risk of death, injury, or damage on roads

C. Reducing the number of vehicles on the road

D. Increasing the number of traffic police

Correct Answer: Option (B)

Short Explanation:

Road safety refers to the practices, rules, and systems designed to reduce the risk of death, injury, or damage on roads for everyone who uses them.

Question 2

According to MoRTH, which factor was linked to the highest share of road accident deaths in India in 2023?

A. Drunk driving

B. Overspeeding

C. Wrong-side driving

D. Mobile phone use

Correct Answer: Option (B)

Short Explanation:

MoRTH's 2023 report found that overspeeding alone was linked to about 68% of road accident deaths, making it the single largest cause.

Question 3

Approximately how many road accidents did India record in 2023, according to MoRTH?

A. Around 3 lakh

B. Around 4.8 lakh

C. Around 6 lakh

D. Around 8 lakh

Correct Answer: Option (B)

Short Explanation:

MoRTH recorded 4,80,583 road accidents in 2023, the highest number of fatalities ever recorded in a single year in India.

Question 4

Which road-user group accounted for the highest share of road accident deaths in India in 2023?

A. Pedestrians

B. Cyclists

C. Two-wheeler riders

D. Car occupants

Correct Answer: Option (C)

Short Explanation:

Two-wheeler riders accounted for the largest share of road accident deaths in 2023, at around 45%, followed by pedestrians.

Question 5

Highways make up roughly what share of India's total road network, yet account for over half of all accidents?

A. Around 1%

B. Around 5%

C. Around 15%

D. Around 25%

Correct Answer: Option (B)

Short Explanation:

Highways account for only around 5% of India's total road network but were responsible for over 53% of accidents and 59% of fatalities in 2023, reflecting the impact of higher speeds.

Question 6

A road safety officer wants to reduce fatalities on a stretch of highway where speed is the dominant risk factor but human error cannot be fully eliminated. Which principle best supports redesigning the road itself rather than only targeting driver behaviour?

A. The Right of Way principle

B. The Safe System (Safe System Approach)

C. The Golden Hour concept

D. The compoundable offence principle

Correct Answer: Option (B)

Short Explanation:

The Safe System Approach holds that since humans will inevitably make mistakes, the road system itself should be designed so that those mistakes do not result in death or serious injury.

Question 7

What does the term 'Black Spot' refer to in road safety?

A. A pothole on the road

B. A road stretch with a history of frequent or severe accidents

C. A poorly lit street lamp

D. A damaged traffic signal

Correct Answer: Option (B)

Short Explanation:

A black spot is a specific stretch of road with a documented history of frequent or severe accidents, often targeted for engineering improvements.

Question 8

Which age group accounted for around 66% of road accident victims in India, according to MoRTH data?

A. Below 18 years

B. 18–45 years

C. 46–60 years

D. Above 60 years

Correct Answer: Option (B)

Short Explanation:

MoRTH data shows that the 18–45 age group, often the working-age population, accounted for around 66% of road accident victims.

Question 9

What is the 'Golden Hour' in the context of road accidents?

A. The busiest traffic hour of the day

B. The first hour after a traumatic injury, critical for survival

C. The hour when most accidents are reported

D. The hour reserved for road safety awareness campaigns

Correct Answer: Option (B)

Short Explanation:

The Golden Hour is legally defined as the first hour after a traumatic injury, during which prompt medical treatment greatly improves the chances of survival.

Question 10

Which Indian state became the first to formally adopt a Vision Zero road safety programme?

A. Tamil Nadu

B. Kerala

C. Haryana

D. Gujarat

Correct Answer: Option (C)

Short Explanation:

Haryana launched India's first state-level Vision Zero programme in 2017, initially across ten districts before expanding statewide.

Question 11

A city wants to align its local road safety strategy with the philosophy behind Vision Zero. Which statement best reflects that philosophy?

A. Traffic fines should be increased until violations stop completely

B. No loss of life on the road is acceptable, and deaths are preventable, not inevitable

C. Only professional drivers should be allowed on public roads

D. Road speed limits should be maximised to reduce congestion

Correct Answer: Option (B)

Short Explanation:

Vision Zero is built on the principle that no traffic death is acceptable and that such deaths and serious injuries are preventable through better systems, not simply an unavoidable cost of mobility.

Question 12

Under the Motor Vehicles Act, which section makes helmet-wearing compulsory for riders and pillion passengers on two-wheelers?

A. Section 112

B. Section 129

C. Section 146

D. Section 185

Correct Answer: Option (B)

Short Explanation:

Section 129 of the Motor Vehicles Act makes wearing a protective helmet compulsory for both the rider and pillion passenger on a two-wheeler.

Question 13

What is the legal blood alcohol limit for driving in India under Section 185 of the Motor Vehicles Act?

A. 10 mg per 100 ml of blood

B. 30 mg per 100 ml of blood

C. 50 mg per 100 ml of blood

D. 80 mg per 100 ml of blood

Correct Answer: Option (B)

Short Explanation:

Section 185 sets the legal blood alcohol limit at 30 mg per 100 ml of blood; driving above this limit is an offence.

Question 14

What is the minimum age to obtain a licence to drive a car or geared two-wheeler in India?

A. 16 years

B. 18 years

C. 20 years

D. 21 years

Correct Answer: Option (B)

Short Explanation:

The minimum age to hold a licence for a car or a geared two-wheeler is 18 years, while a limited licence for a gearless two-wheeler up to 50cc may be issued from age 16.

Question 15

Who is legally protected from harassment under India's Good Samaritan guidelines?

A. Only doctors who treat accident victims

B. Any bystander who voluntarily helps an accident victim

C. Only the driver responsible for the accident

D. Only police officers at the scene

Correct Answer: Option (B)

Short Explanation:

Good Samaritan guidelines protect any bystander who voluntarily helps an accident victim from legal harassment, repeated questioning, or being forced to disclose their identity.

Question 16

What does the Cashless Treatment Scheme, 2025 primarily guarantee to road accident victims?

A. Free lifetime healthcare

B. Free treatment up to ₹1.5 lakh for the first seven days at designated hospitals

C. A one-time cash payment of ₹1.5 lakh

D. Free vehicle repair after an accident

Correct Answer: Option (B)

Short Explanation:

The Cashless Treatment Scheme, 2025 guarantees cashless emergency treatment of up to ₹1.5 lakh for the first seven days after an accident, at designated hospitals.

Question 17

Approximately what percentage of road accidents in 2022 occurred between 6 PM and 9 PM, according to MoRTH?

A. About 5%

B. About 10%

C. About 20%

D. About 35%

Correct Answer: Option (C)

Short Explanation:

MoRTH data for 2022 shows that around 20.4% of accidents occurred between 6 PM and 9 PM, making it the busiest and riskiest window of the day.

Question 18

Which of these is generally considered the most vulnerable type of road user, with no physical protection at all?

A. Bus passengers

B. Car drivers

C. Pedestrians

D. Truck drivers

Correct Answer: Option (C)

Short Explanation:

Pedestrians have no physical protective shell around them, making them among the most vulnerable road users during any collision.

Question 19

When is India's National Road Safety Month observed each year?

A. January

B. March

C. July

D. November

Correct Answer: Option (A)

Short Explanation:

MoRTH observes National Road Safety Month every January to raise public awareness about safe road behaviour and traffic rules.

Question 20

MoRTH data shows that rural areas accounted for about 68% of road deaths in 2022, compared to 32% in urban areas. What is the most reasonable explanation consistent with other MoRTH findings covered in this series?

A. Rural roads have far more traffic police than urban roads

B. Higher-speed highway stretches run largely through rural and semi-urban areas

C. Urban areas have no traffic laws

D. Rural residents do not use helmets or seatbelts at all

Correct Answer: Option (B)

Short Explanation:

Since highways carry a disproportionate share of accidents and fatalities due to higher speeds, and much of the highway network passes through rural and semi-urban stretches, this helps explain the higher rural share of deaths.

Question 21

Under the Motor Vehicles (Amendment) Act, 2019, what is the minimum compensation for an accident death, up from the earlier ₹25,000?

A. ₹50,000

B. ₹1 lakh

C. ₹2 lakh

D. ₹5 lakh

Correct Answer: Option (C)

Short Explanation:

The 2019 amendment raised the minimum compensation for accident death to ₹2 lakh, a significant increase from the earlier ₹25,000.

Question 22

Which Indian city recorded the highest number of road accidents among million-plus population cities in 2022?

A. Mumbai

B. Bengaluru

C. Delhi

D. Chennai

Correct Answer: Option (C)

Short Explanation:

Delhi recorded the highest number of road accidents (5,652) among Indian million-plus cities in 2022, and remains the only such city with over 1,000 road accident deaths in a year.

Question 23

What is a 'Road Accident' generally defined as?

A. Any vehicle breakdown on a public road

B. An unplanned, unexpected event on a public road resulting in death, injury, or damage

C. Any traffic jam lasting more than 30 minutes

D. Only accidents involving two or more vehicles

Correct Answer: Option (B)

Short Explanation:

A road accident is defined as an unplanned, unexpected event on a public road that results in death, injury, or damage.

Question 24

What was the total number of road accident deaths recorded in India in 2023?

A. 1,53,972

B. 1,68,491

C. 1,72,890

D. 1,80,320

Correct Answer: Option (C)

Short Explanation:

India recorded 1,72,890 road accident deaths in 2023, the highest ever recorded in a single year according to MoRTH.

Question 25

A district administration is choosing between two interventions with a fixed budget: better street lighting on a rural highway stretch, or a public awareness campaign on helmet use in the same district. Based on MoRTH's cause-of-accident data, which single intervention is most likely to have the largest direct impact on fatalities, all else equal?

A. The awareness campaign, since overspeeding is a behavioural issue unrelated to lighting

B. The lighting improvement, since darkness is the leading cause of all accidents

C. Neither, since black spot rectification is the only effective measure

D. It depends on whether the stretch is also a high-speed corridor, since overspeeding remains the leading cause nationally

Correct Answer: Option (D)

Short Explanation:

Since overspeeding is consistently the largest single contributor to road deaths, the effectiveness of either intervention depends heavily on whether excessive speed is also a major factor on that specific stretch — engineering and behavioural measures often need to be combined for the type of road involved.

Question 26

What does 'Fatality Rate' typically measure in road safety statistics?

A. Number of accidents per day

B. Number of road deaths per 10,000 registered vehicles

C. Number of vehicles manufactured per year

D. Number of traffic police per city

Correct Answer: Option (B)

Short Explanation:

Fatality rate is commonly expressed as the number of road deaths per 10,000 registered vehicles, allowing comparison across regions with different vehicle populations.

Question 27

Which of these is one of the five pillars of the UN Decade of Action for Road Safety 2021–2030?

A. Vehicle Manufacturing Growth

B. Post-Crash Response

C. Traffic Signal Standardisation

D. Toll Collection Efficiency

Correct Answer: Option (B)

Short Explanation:

Post-Crash Response is one of the five pillars of the UN Decade of Action for Road Safety, alongside Road Safety Management, Safer Roads and Mobility, Safer Vehicles, and Safer Road Users.

Question 28

Which of the following best describes a 'Traffic Violation'?

A. Any act of driving during peak hours

B. Breaking any rule under the Motor Vehicles Act, such as overspeeding or signal jumping

C. Driving a new vehicle for the first time

D. Parking a vehicle inside a private garage

Correct Answer: Option (B)

Short Explanation:

A traffic violation is any act that breaks a rule under the Motor Vehicles Act or its associated regulations, such as overspeeding or jumping a signal.

Question 29

What long-term national goal was set by the New Delhi Road Safety Declaration in February 2026?

A. Doubling the number of highways by 2030

B. Zero preventable road fatalities

C. Banning two-wheelers from national highways

D. Making all vehicles electric by 2030

Correct Answer: Option (B)

Short Explanation:

The New Delhi Road Safety Declaration set a long-term national goal of zero preventable road fatalities, aligned with the UN Decade of Action for Road Safety 2021–2030.

Question 30

Which of these road users is specifically responsible for using footpaths and zebra crossings wherever available?

A. Only truck drivers

B. Only cyclists

C. Pedestrians

D. Only bus drivers

Correct Answer: Option (C)

Short Explanation:

Pedestrians are expected to use footpaths and zebra crossings wherever available, and to avoid jaywalking or crossing at undesignated points.

Question 31

What was the approximate number of road accident injuries recorded in India in 2023?

A. 2,45,000

B. 3,10,500

C. 4,62,825

D. 5,20,000

Correct Answer: Option (C)

Short Explanation:

MoRTH recorded 4,62,825 road accident injuries in 2023, an increase over the previous year's figures.

Question 32

Comparing MoRTH's 2022 and 2023 data, road accidents, deaths, and injuries all increased year-on-year despite ongoing safety campaigns. What does this trend most strongly suggest about India's road safety challenge?

A. Road safety campaigns have had no measurable effect anywhere in India

B. Awareness alone, without matching gains in enforcement and infrastructure, has been insufficient to reverse the trend

C. Vehicle numbers must have decreased during this period

D. MoRTH stopped collecting accurate data after 2021

Correct Answer: Option (B)

Short Explanation:

A continued rise in accidents, deaths, and injuries despite awareness efforts suggests that education alone is not enough — sustained gains typically require it to be matched by stronger enforcement, engineering, and emergency response improvements.

Question 33

Which of the following is classified as a 'passenger' responsibility under road safety guidelines?

A. Setting the vehicle's speed

B. Wearing a seatbelt and not distracting the driver

C. Choosing the driving route

D. Repairing the vehicle's brakes

Correct Answer: Option (B)

Short Explanation:

Passengers are expected to wear seatbelts, avoid distracting the driver, and board or alight only at designated stops.

Question 34

According to MoRTH, which state recorded the highest number of road accident fatalities in both 2022 and 2023?

A. Tamil Nadu

B. Maharashtra

C. Uttar Pradesh

D. Karnataka

Correct Answer: Option (C)

Short Explanation:

Uttar Pradesh recorded the highest number of road accident fatalities in both the 2022 and 2023 MoRTH reports, followed by Tamil Nadu.

Question 35

What does 'Right of Way' mean in road safety?

A. The fastest route to a destination

B. The legal priority given to one road user to proceed before another

C. The right lane on a multi-lane highway

D. A road reserved only for VIP movement

Correct Answer: Option (B)

Short Explanation:

Right of way refers to the legal priority given to one road user to proceed before another, such as pedestrians at a zebra crossing.

Question 36

What is the primary purpose of a 'Road Safety Audit'?

A. To calculate vehicle insurance premiums

B. To formally and systematically check road design for safety risks

C. To issue driving licences

D. To collect toll payments

Correct Answer: Option (B)

Short Explanation:

A Road Safety Audit is a formal, systematic check of road design intended to identify and correct safety risks before or after construction.

Question 37

A newly built expressway shows a high accident rate concentrated at merge points despite meeting all design standards. Based on the Safe System Approach, what is the most appropriate next step?

A. Increase the speed limit so vehicles pass through merge points faster

B. Conduct a road safety audit of the merge points and re-engineer them for safer merging behaviour

C. Rely solely on driver education campaigns near the expressway

D. Close the expressway permanently

Correct Answer: Option (B)

Short Explanation:

Under the Safe System Approach, when a specific location repeatedly produces crashes despite meeting general standards, the appropriate response is to audit and re-engineer that location, since infrastructure design is expected to compensate for predictable human error.

Question 38

What is the main takeaway of the statement that 'awareness is the first layer of protection' in road safety?

A. Awareness alone guarantees safety in all situations

B. Knowing risks and rules is a necessary starting point, even though it must be combined with action

C. Awareness is less important than expensive safety equipment

D. Only new drivers need road safety awareness

Correct Answer: Option (B)

Short Explanation:

Awareness is described as a necessary first layer because a driver who does not understand a risk cannot act to avoid it — but awareness alone is not sufficient without consistent action.

Question 39

Which of the following best fits the definition of a 'Fatal Accident'?

A. Any accident involving a two-wheeler

B. An accident in which one or more people lose their lives

C. Any accident occurring on a national highway

D. An accident causing only vehicle damage

Correct Answer: Option (B)

Short Explanation:

A fatal accident is specifically defined as one in which one or more people lose their lives, distinguishing it from accidents causing only injury or property damage.

Question 40

MoRTH data shows two-wheeler riders account for the largest single share of road deaths (45%), while pedestrians are the second-largest group. A city government has limited funds and must choose one primary safety investment. Based purely on the scale of the two largest victim groups, which investment addresses the greatest combined share of fatalities?

A. Building more multi-storey car parking

B. Improving helmet compliance enforcement and separated pedestrian infrastructure together

C. Increasing the number of luxury bus routes

D. Reducing the price of car insurance

Correct Answer: Option (B)

Short Explanation:

Since two-wheeler riders and pedestrians together represent the two largest victim groups, addressing both helmet compliance and safe pedestrian infrastructure targets the largest combined share of fatalities.

Question 41

What is the core idea behind describing road safety as a 'shared system' involving road users, government, vehicle manufacturers, and emergency services?

A. Only the government is legally responsible for all accidents

B. Effective road safety depends on multiple stakeholders working together, not any single group alone

C. Vehicle manufacturers bear no responsibility for road safety

D. Emergency services are only relevant after an accident has already occurred

Correct Answer: Option (B)

Short Explanation:

Road safety is described as a shared system because rules, safe roads, reliable vehicles, and fast emergency response must all function together — no single stakeholder can ensure safety alone.

Question 42

Two towns have similar traffic volumes, but Town A enforces speed limits strictly while Town B relies only on speed limit signage without enforcement. Based on what MoRTH data shows about overspeeding's role in fatalities, which outcome is most likely?

A. Both towns will have identical fatality rates, since signage alone is sufficient

B. Town B is likely to see a higher fatality rate, since signage without enforcement rarely changes driver behaviour on its own

C. Town A will have a higher fatality rate due to stricter enforcement

D. Enforcement has no relationship with overspeeding-related fatalities

Correct Answer: Option (B)

Short Explanation:

Since overspeeding is the leading cause of road deaths, and unenforced signage is known to have limited effect on driver behaviour, Town B lacking enforcement is likely to see more overspeeding-related fatalities than Town A.

Question 43

What is the recommended first step for a pedestrian before crossing any road, according to safe crossing practice?

A. Start crossing immediately if no vehicle is visible

B. Use a zebra crossing, subway, or foot-over-bridge wherever available

C. Cross diagonally to save time

D. Wait for a vehicle to slow down before starting to cross anywhere

Correct Answer: Option (B)

Short Explanation:

Pedestrians are advised to use a zebra crossing, subway, or foot-over-bridge wherever available, rather than crossing at an undesignated point.

Question 44

What is the significance of the number '5%' frequently cited in relation to India's highways and road safety statistics?

A. Highways represent about 5% of vehicles on Indian roads

B. Highways make up about 5% of India's total road network but a much larger share of accidents

C. 5% of Indian drivers hold a valid licence

D. 5% of road accidents involve pedestrians

Correct Answer: Option (B)

Short Explanation:

Highways account for only around 5% of India's total road network, yet are responsible for a disproportionately large share of accidents and fatalities due to higher speeds.

Question 45

Which of these best describes 'Defensive Driving'?

A. Driving as fast as possible to avoid being hit from behind

B. Driving in a way that anticipates and avoids potential hazards

C. Driving only during daylight hours

D. Driving with headlights on at all times, regardless of visibility

Correct Answer: Option (B)

Short Explanation:

Defensive driving means driving in a way that anticipates and avoids potential hazards, rather than reacting only after a dangerous situation has already developed.

Question 46

Why does the Safe System Approach place responsibility on system designers (road engineers, policymakers) in addition to individual drivers?

A. Because drivers are never at fault in accidents

B. Because it assumes humans will inevitably make mistakes, and the system should prevent those mistakes from becoming fatal

C. Because engineers are legally liable for every accident

D. Because policymakers physically operate vehicles on the road

Correct Answer: Option (B)

Short Explanation:

The Safe System Approach assumes human error is inevitable, so responsibility is shared between road users and those who design and manage roads and vehicles, so that mistakes do not turn fatal.

Question 47

A state government is deciding how to measure the success of a new road safety initiative launched at the start of a year. Which combination of metrics would most reliably indicate genuine improvement, based on the statistics covered in this module?

A. Total number of driving licences issued that year

B. Year-on-year change in accidents, deaths, and injuries, alongside the fatality rate per 10,000 vehicles

C. Total kilometres of new highway constructed

D. Number of road safety posters displayed in public places

Correct Answer: Option (B)

Short Explanation:

Tracking year-on-year changes in accidents, deaths, injuries, and the fatality rate per vehicle gives a much more direct and reliable measure of genuine safety improvement than indicators like licences issued or posters displayed, which do not directly reflect outcomes.

Question 48

What is the main reason road safety is described as a 'life skill' rather than a technical subject only for professionals?

A. Because it only applies to professional drivers

B. Because every road user's daily choices directly affect their own and others' safety

C. Because it is taught only in driving schools

D. Because it has no connection to everyday behaviour

Correct Answer: Option (B)

Short Explanation:

Road safety is called a life skill because it depends on everyday choices made by every road user, not specialised knowledge reserved for professionals.

Question 49

Roughly how many road accident deaths does India's 2023 total of 1,72,890 correspond to, in terms of frequency?

A. Around one death every 30 minutes

B. Around one death every three minutes

C. Around one death every hour

D. Around one death every 10 minutes

Correct Answer: Option (B)

Short Explanation:

India's 1,72,890 road deaths in 2023 work out to roughly one death every three minutes, around the clock, illustrating the scale of the problem.

Question 50

A highway stretch has good lighting, well-maintained signage, and low rainfall year-round, yet still records a high fatality rate. Based on the four broad categories of accident causes, which category should investigators prioritise checking first, given the other three are largely ruled out?

A. Weather-related factors

B. Road environment factors

C. Human error and vehicle-related factors (such as speeding or poor vehicle maintenance)

D. None of the four categories, since the stretch is well-designed

Correct Answer: Option (C)

Short Explanation:

With road environment and weather-related causes largely ruled out by good lighting, signage, and low rainfall, investigators should prioritise human error (such as overspeeding) and vehicle-related factors, which remain the most likely explanations.

Question 51

On which side of the road do vehicles keep in India, under the 'Keep Left' principle?

A. Right

B. Left

C. Centre

D. Either side, as convenient

Correct Answer: Option (B)

Short Explanation:

India follows the 'Keep Left' principle, requiring drivers to stay as far to the left of the carriageway as possible, except when overtaking.

Question 52

What does a solid red traffic light mean?

A. Proceed with caution

B. Complete stop

C. Slow down only

D. Prepare to accelerate

Correct Answer: Option (B)

Short Explanation:

A red signal requires a complete stop behind the stop line or crosswalk, and vehicles must wait until the signal turns green.

Question 53

Under the national default speed limits notified by MoRTH, what is the maximum speed for cars (M1 category) on an expressway?

A. 80 km/h

B. 100 km/h

C. 120 km/h

D. 140 km/h

Correct Answer: Option (C)

Short Explanation:

The national default speed limit for cars on expressways is 120 km/h, as notified by MoRTH via S.O. 1522(E) in April 2018.

Question 54

What does a solid yellow line on a road indicate?

A. Overtaking is allowed with caution

B. No overtaking is allowed

C. The lane is reserved for buses

D. The road is one-way

Correct Answer: Option (B)

Short Explanation:

A solid yellow line means no overtaking is permitted from that side, regardless of how clear the road may appear.

Question 55

A driver approaches a junction where the traffic light is green, but a traffic police officer is signalling 'stop' with a raised hand. What should the driver do?

A. Proceed, since a green light has legal priority

B. Stop, since a police officer's signal overrides the automatic light signal

C. Sound the horn and proceed slowly

D. Wait for the light to turn red before deciding

Correct Answer: Option (B)

Short Explanation:

A traffic police officer's hand signal always overrides an automatic light signal, so the driver must stop despite the green light.

Question 56

What shape are most cautionary (warning) road signs in India?

A. Circle

B. Triangle

C. Rectangle

D. Octagon

Correct Answer: Option (B)

Short Explanation:

Cautionary or warning signs are triangular, with a red border and the apex pointing upward, alerting drivers to hazards ahead.

Question 57

Under Section 122 of the Motor Vehicles Act, what is prohibited?

A. Driving above the speed limit

B. Leaving a vehicle in a dangerous or obstructive parking position

C. Failing to wear a seatbelt

D. Driving without a valid PUC certificate

Correct Answer: Option (B)

Short Explanation:

Section 122 prohibits leaving a vehicle stationary on a public road in a manner that causes danger, obstruction, or inconvenience to other road users.

Question 58

According to the Rules of the Road Regulations, 1989, what is prohibited on a road marked 'One Way'?

A. Parking at any time

B. Driving against the marked direction of travel

C. Overtaking any vehicle

D. Using indicators

Correct Answer: Option (B)

Short Explanation:

It is an offence to drive against the marked direction of a one-way road, and equally an offence to reverse into one against its flow.

Question 59

A driver wants to overtake a truck ahead on a three-lane highway. The truck is signalling a right turn from the centre lane. According to overtaking regulations, from which side may the driver safely overtake in this specific situation?

A. Only from the right, as with all overtaking

B. From the left, since the truck is turning right and has signalled accordingly

C. Overtaking is not permitted in any case

D. Only if the truck comes to a complete stop first

Correct Answer: Option (B)

Short Explanation:

Overtaking from the left is permitted in specific safe situations, including when the vehicle ahead is turning right and signalling that intention, as in this case.

Question 60

What does a broken white line on a road typically indicate?

A. No lane changes allowed under any circumstance

B. Lane changing is permitted when safe

C. The road is closed ahead

D. A pedestrian crossing is near

Correct Answer: Option (B)

Short Explanation:

A broken white line indicates that changing lanes is permitted when it is safe to do so, unlike a solid white line which discourages lane shifting.

Question 61

What does a yellow or amber traffic light signal indicate?

A. Go faster to clear the intersection

B. Caution — prepare to stop if safe to do so

C. Stop immediately, no exceptions

D. Pedestrians may cross

Correct Answer: Option (B)

Short Explanation:

A yellow or amber light signals caution, meaning drivers should slow down and prepare to stop if it is safe to do so, since the signal is about to change.

Question 62

What colour and shape is a mandatory 'Stop' sign in India?

A. Blue circle

B. Green rectangle

C. Red octagon with white text

D. Yellow triangle

Correct Answer: Option (C)

Short Explanation:

The Stop sign is a red octagon with white text, one of only two mandatory sign shapes that break the usual circular pattern, for maximum recognisability.

Question 63

What is the national default speed limit for buses (M2/M3 category) on a 4-lane divided highway?

A. 60 km/h

B. 70 km/h

C. 90 km/h

D. 100 km/h

Correct Answer: Option (C)

Short Explanation:

The national default speed limit for buses (M2/M3 category, 9+ seats) on a 4-lane divided highway is 90 km/h, lower than the car limit of 100 km/h.

Question 64

What is the difference between a 'No Parking' sign and a 'No Stopping' sign?

A. There is no legal difference between the two

B. No Parking allows a brief stop with the driver present; No Stopping allows no halt at all

C. No Stopping only applies to two-wheelers

D. No Parking applies only at night

Correct Answer: Option (B)

Short Explanation:

A No Parking sign allows a brief stop to drop off or pick up passengers if the driver remains with the vehicle, while No Stopping does not permit any halt for any reason.

Question 65

A driver sees a broken yellow line on their side of the road but a solid yellow line on the opposing side. What does this combination most likely mean?

A. Neither side may overtake under any circumstances

B. The driver's side may overtake when safe, but oncoming traffic may not overtake at this point

C. Both sides may overtake freely

D. The road is closed to all traffic

Correct Answer: Option (B)

Short Explanation:

When a broken yellow line appears on one side and a solid line on the other, it means the vehicle on the broken-line side may overtake when safe, while the vehicle on the solid-line side may not, reflecting different visibility conditions for each direction.

Question 66

What is the minimum age to obtain a licence for a gearless two-wheeler up to 50cc in India?

A. 14 years

B. 16 years

C. 18 years

D. 21 years

Correct Answer: Option (B)

Short Explanation:

A limited licence for a gearless two-wheeler up to 50cc may be issued from age 16, without a pillion rider, under the Motor Vehicles Act.

Question 67

What is the penalty range for overspeeding under the Motor Vehicles (Amendment) Act, 2019?

A. ₹100 – ₹200

B. ₹1,000 – ₹4,000, varying by vehicle category

C. ₹10,000 flat fine for all vehicles

D. No monetary penalty, only licence suspension

Correct Answer: Option (B)

Short Explanation:

Overspeeding penalties range from about ₹1,000 to ₹4,000 depending on the vehicle category, under the Motor Vehicles (Amendment) Act, 2019.

Question 68

Under the Rules of the Road Regulations, where is overtaking generally prohibited?

A. On any straight, open highway

B. At junctions, bends, and pedestrian crossings

C. Only on single-lane rural roads

D. Only during night-time driving

Correct Answer: Option (B)

Short Explanation:

Overtaking is prohibited at junctions, bends, pedestrian crossings, and other locations where visibility or safety cannot be assured.

Question 69

What is the purpose of a 'Give Way' sign?

A. To indicate a mandatory stop at all times

B. To require yielding to traffic on the road being entered, if traffic is present

C. To mark a pedestrian-only zone

D. To indicate the end of a one-way road

Correct Answer: Option (B)

Short Explanation:

A Give Way sign requires a driver to yield to traffic on the road they are entering, but unlike a Stop sign, a full stop is only required if other traffic is actually present.

Question 70

A driver on a two-lane road wants to overtake a slow-moving cyclist. The road has no centre line markings at all, and the road ahead is clearly visible for a long distance with no oncoming traffic. What is the most appropriate action?

A. Never overtake, since there is no marking permitting it

B. Overtake with adequate clearance, since the road ahead is clearly visible and safe, applying general safe overtaking judgment

C. Wait for a solid line to appear before overtaking

D. Only overtake if a traffic police officer is present

Correct Answer: Option (B)

Short Explanation:

In the absence of markings, the underlying safety principle applies: overtake only when the road ahead is clearly visible and it can be done safely — which is satisfied here since there is no oncoming traffic and full visibility.

Question 71

What does a flashing red traffic light typically require a driver to do?

A. Proceed without stopping

B. Treat it like a Stop sign — stop completely, then proceed when safe

C. Ignore it and follow the previous signal

D. Only slow down, without stopping

Correct Answer: Option (B)

Short Explanation:

A flashing red light is treated exactly like a Stop sign: the driver must come to a complete stop and proceed only when it is safe to do so.

Question 72

What is the shape and colour of most informatory road signs on Indian highways?

A. Blue circle

B. Green rectangle with white text

C. Red triangle

D. Yellow octagon

Correct Answer: Option (B)

Short Explanation:

On highways and expressways, informatory signs such as destination boards use a green rectangular background with white lettering.

Question 73

What is the national default speed limit for goods vehicles (N category) on a municipal road?

A. 40 km/h

B. 50 km/h

C. 60 km/h

D. 70 km/h

Correct Answer: Option (C)

Short Explanation:

The national default speed limit for goods vehicles on municipal roads is 60 km/h, the same as the limit set for buses on such roads.

Question 74

What does a double white line on a road mean?

A. Lane changes are always permitted

B. The line must never be crossed under any circumstance

C. Only two-wheelers may cross it

D. It marks a temporary construction zone

Correct Answer: Option (B)

Short Explanation:

A double white line indicates a boundary that must never be crossed under any circumstance, often used to separate opposing lanes on higher-risk stretches.

Question 75

A learner driver is confused between a blue circular sign and a red circular sign, both instructing an action. What is the key distinguishing principle?

A. Blue signs are informatory and not legally binding; red signs are always mandatory

B. Both are equally non-binding suggestions

C. Red circles are mandatory and prohibit an action; blue circles are also mandatory but instruct a required, positive action

D. Colour has no legal significance in Indian traffic signs

Correct Answer: Option (C)

Short Explanation:

Both blue and red circular signs are mandatory and legally binding, but red circles prohibit an action ('don't'), while blue circles instruct a required action ('do'), such as a compulsory turn.

Question 76

What is 'Lane Discipline'?

A. Driving only in the rightmost lane at all times

B. Staying within a marked lane and changing lanes only when safe and signalled

C. Driving with headlights on during the day

D. Avoiding driving on highways altogether

Correct Answer: Option (B)

Short Explanation:

Lane discipline means staying within a single marked lane and changing lanes only after checking mirrors and signalling clearly.

Question 77

On a multi-lane road, what is the rightmost lane generally intended for?

A. Continuous cruising at any speed

B. Overtaking only, not continuous use

C. Parking during heavy traffic

D. Two-wheelers exclusively

Correct Answer: Option (B)

Short Explanation:

On multi-lane roads, the rightmost lane is intended for overtaking only; drivers should return to the left lane promptly after completing an overtake.

Question 78

What is the penalty for allowing a juvenile to drive a motor vehicle, under Section 199A?

A. No penalty, since the juvenile is not yet an adult

B. The vehicle owner or guardian is fined ₹25,000 and the registration may be cancelled

C. Only a verbal warning is issued

D. A fine of ₹500 is imposed on the juvenile

Correct Answer: Option (B)

Short Explanation:

Under Section 199A, the vehicle's owner or the juvenile's guardian can be fined ₹25,000, and the vehicle's registration may be cancelled.

Question 79

What is a 'Box Junction' road marking used for?

A. To mark a designated parking zone

B. To indicate an area that must never be blocked, even in heavy traffic

C. To mark a pedestrian-only street

D. To indicate a toll collection point

Correct Answer: Option (B)

Short Explanation:

A box junction is a yellow-grid marked area at an intersection that must never be blocked, even if a vehicle's exit is temporarily obstructed by traffic.

Question 80

At a busy intersection, a driver notices the box junction ahead is congested, but their own exit lane is temporarily clear. Traffic is moving slowly. What is the correct action?

A. Enter the box junction immediately since the exit lane is currently clear

B. Wait before entering the box junction until it is certain the exit can be cleared completely

C. Enter and stop inside the box junction if needed, since traffic is moving slowly

D. Sound the horn repeatedly to clear the junction

Correct Answer: Option (B)

Short Explanation:

A driver should never enter a box junction unless their exit is clear enough to complete the crossing without stopping inside it, even if the entry point looks momentarily clear.

Question 81

What is the purpose of a 'Stop Line' road marking?

A. To indicate where pedestrians may stand

B. To mark where a vehicle must come to a complete halt at a signal or stop sign

C. To show the boundary of a parking zone

D. To indicate a speed bump ahead

Correct Answer: Option (B)

Short Explanation:

A stop line is a thick white line marking where a vehicle must come to a complete halt at a signal-controlled junction or stop sign.

Question 82

What does the term 'Intersection' refer to in traffic terminology?

A. A one-way road

B. A point where two or more roads cross or meet

C. A pedestrian-only zone

D. A vehicle inspection checkpoint

Correct Answer: Option (B)

Short Explanation:

An intersection is a point where two or more roads cross or meet, often requiring signals, signs, or right-of-way rules to manage traffic safely.

Question 83

What is the national default speed limit for motorcycles on a 4-lane divided road?

A. 50 km/h

B. 60 km/h

C. 80 km/h

D. 100 km/h

Correct Answer: Option (C)

Short Explanation:

The national default speed limit for motorcycles on a 4-lane divided road is 80 km/h, the same as on expressways where permitted.

Question 84

What must a driver do before overtaking, according to safe overtaking practice?

A. Only check the rearview mirror

B. Signal, ensure the road ahead is clear, and not exceed the speed limit while overtaking

C. Sound the horn continuously throughout the overtaking manoeuvre

D. Overtake as quickly as possible regardless of visibility

Correct Answer: Option (B)

Short Explanation:

Before overtaking, a driver must signal their intention, confirm the road ahead is clear, and avoid exceeding the speed limit during the manoeuvre.

Question 85

A car is being overtaken by another vehicle on a two-lane road. What is the correct behaviour for the driver being overtaken?

A. Accelerate to prevent being overtaken

B. Maintain speed or slow slightly, without obstructing the overtaking vehicle

C. Move fully into the opposite lane to give more space

D. Flash headlights repeatedly to signal disapproval

Correct Answer: Option (B)

Short Explanation:

A driver being overtaken should not speed up or obstruct the overtaking vehicle; maintaining a steady or slightly reduced speed allows the manoeuvre to be completed safely.

Question 86

What is the primary purpose of road markings in general?

A. To decorate the road surface

B. To guide vehicle position and behaviour directly on the road surface

C. To indicate the age of the road

D. To replace the need for traffic signals entirely

Correct Answer: Option (B)

Short Explanation:

Road markings guide vehicle position and behaviour directly on the road surface, working alongside signals and signs to regulate traffic.

Question 87

What does a 'Give Way Line' (a broken line, sometimes with a triangle marking) require of a driver?

A. A complete stop regardless of traffic

B. Yielding to traffic on the main road, with a full stop not always mandatory

C. No action is required at a give way line

D. Only two-wheelers must observe it

Correct Answer: Option (B)

Short Explanation:

A give way line requires a driver to yield to traffic on the main road; unlike a stop line, a complete stop is not always mandatory unless traffic conditions require it.

Question 88

Which of these vehicle categories has the lowest national default speed limit on a 4-lane divided road?

A. Cars (M1)

B. Buses (M2/M3)

C. Three-wheeled vehicles

D. Motorcycles

Correct Answer: Option (C)

Short Explanation:

Three-wheeled vehicles have a national default speed limit of 50 km/h on a 4-lane divided road, lower than cars, buses, and motorcycles.

Question 89

What is the primary responsibility of a two-wheeler rider regarding pillion passengers?

A. No restriction applies to pillion riders

B. Ensuring the pillion passenger also wears a helmet and that only one pillion is carried

C. Pillion passengers do not need any safety gear

D. Pillion riders may sit sideways for comfort

Correct Answer: Option (B)

Short Explanation:

A two-wheeler rider must ensure the pillion passenger wears a helmet and that only one pillion passenger is carried, as carrying more is unsafe and illegal.

Question 90

A driver is approaching a signal-controlled intersection just as the light turns yellow, and they are already too close to stop safely without risking a rear-end collision. What is the safest course of action?

A. Slam the brakes regardless of the vehicle behind

B. Continue through the intersection at a steady speed, since stopping abruptly would be more dangerous

C. Swerve onto the footpath to avoid the intersection

D. Reverse away from the intersection

Correct Answer: Option (B)

Short Explanation:

When a vehicle is too close to stop safely as a signal changes, continuing through at a steady speed is safer than an abrupt, unsafe stop that risks a rear-end collision — a recognised exception to always stopping at yellow.

Question 91

What does a green traffic light mean?

A. Proceed, but only if the way ahead is actually clear and safe

B. Proceed at maximum possible speed

C. Stop and wait for pedestrians

D. Yield only to two-wheelers

Correct Answer: Option (A)

Short Explanation:

A green light means a driver may proceed, but only if the way ahead is actually clear and safe — it does not guarantee an automatically safe path.

Question 92

What is the primary legal source governing India's traffic rules and driver conduct?

A. The Indian Penal Code

B. The Motor Vehicles Act, 1988

C. The Right to Information Act

D. The Consumer Protection Act

Correct Answer: Option (B)

Short Explanation:

The Motor Vehicles Act, 1988, as amended, is India's primary law governing licensing, vehicle registration, traffic conduct, and penalties.

Question 93

What is the national default speed limit for cars on 'other roads' (non-highway, non-municipal) under MoRTH's 2018 notification?

A. 50 km/h

B. 60 km/h

C. 70 km/h

D. 90 km/h

Correct Answer: Option (C)

Short Explanation:

The national default speed limit for cars on other roads, same as municipal roads, is 70 km/h under the MoRTH notification.

Question 94

What is the correct sequence of colours in a standard traffic signal from top to bottom?

A. Green, Yellow, Red

B. Red, Yellow, Green

C. Yellow, Red, Green

D. Red, Green, Yellow

Correct Answer: Option (B)

Short Explanation:

The standard sequence from top to bottom in a traffic signal is Red, Yellow (Amber), and Green.

Question 95

A three-wheeler and a car are both travelling on a 4-lane divided highway. Based on national default speed limits, which statement is accurate?

A. Both vehicles share the same speed limit of 100 km/h

B. The car's limit (100 km/h) is double the three-wheeler's limit (50 km/h)

C. Three-wheelers are not permitted on 4-lane divided highways at all

D. The three-wheeler has a higher limit than the car

Correct Answer: Option (B)

Short Explanation:

On a 4-lane divided road, the car's national default limit is 100 km/h, while the three-wheeler's limit is 50 km/h — exactly double, reflecting the higher stability and safety margin of cars at speed.

Question 96

What must a driver do when approaching a pedestrian who is crossing at a zebra crossing?

A. Sound the horn to hurry them along

B. Stop and allow the pedestrian to cross, since pedestrians have the right of way there

C. Drive around the pedestrian without stopping

D. Only slow down if the pedestrian is a child

Correct Answer: Option (B)

Short Explanation:

Pedestrians have absolute right of way at a zebra crossing, and drivers must stop and allow them to finish crossing safely.

Question 97

What is the purpose of 'Chevron Markings' on a road?

A. To indicate a speed limit change

B. To guide traffic safely around a hazard or central island using arrow-shaped patterns

C. To mark reserved parking for emergency vehicles

D. To indicate a school zone

Correct Answer: Option (B)

Short Explanation:

Chevron markings are arrow-shaped patterns used to guide traffic safely around a hazard, curve, or central island.

Question 98

Which of these actions is prohibited when a 'No Entry' sign is displayed?

A. Parking near the sign

B. Entering that specific direction of the road with any vehicle

C. Walking past the sign as a pedestrian

D. Using a horn near the sign

Correct Answer: Option (B)

Short Explanation:

A No Entry sign, shown as a solid red circle with a white horizontal bar, prohibits any vehicle from entering that specific direction of travel.

Question 99

What is the recommended action when your vehicle's lane ends and merges with another lane?

A. Speed up and force your way into the other lane

B. Signal early, check mirrors and blind spots, and merge smoothly when safe

C. Stop completely until the other lane is empty

D. Sound the horn continuously while merging

Correct Answer: Option (B)

Short Explanation:

When a lane ends, the safe approach is to signal early, check mirrors and blind spots, and merge smoothly into the adjoining lane when it is safe to do so.

Question 100

A two-wheeler rider wants to enter a road marked with a blue circular 'Compulsory Ahead' sign, but their intended destination requires an immediate left turn just after the sign. What is the legally correct action?

A. Turn left immediately, ignoring the sign, since the destination requires it

B. Follow the compulsory-ahead instruction first, then find the next legal point to turn left

C. Turn left only if no traffic police officer is visible

D. Reverse back before reaching the sign

Correct Answer: Option (B)

Short Explanation:

A blue circular mandatory sign is a binding legal instruction, not a suggestion; the rider must follow it and find the next legal opportunity to reach their destination, rather than violating it directly.

Question 101

How many core categories of traffic signs exist under IRC standards in India?

A. Two

B. Three

C. Four

D. Five

Correct Answer: Option (B)

Short Explanation:

Indian traffic signs fall into three core categories: mandatory (regulatory), cautionary (warning), and informatory signs.

Question 102

What shape is a 'Give Way' sign in India?

A. Circle

B. Inverted triangle

C. Rectangle

D. Octagon

Correct Answer: Option (B)

Short Explanation:

The Give Way sign is an inverted triangle with a red border, one of only two sign shapes that break the usual circular pattern of mandatory signs.

Question 103

What colour is the 'No Entry' sign in India?

A. Solid red circle with a white horizontal bar

B. Blue circle with a white arrow

C. Yellow triangle with a black symbol

D. Green rectangle with white text

Correct Answer: Option (A)

Short Explanation:

The No Entry sign is a solid red circle with a white horizontal bar, indicating that no vehicle may enter in that direction.

Question 104

Approximately how many cautionary (warning) signs are officially codified under IRC standards in India?

A. About 10

B. About 20

C. About 40

D. About 100

Correct Answer: Option (C)

Short Explanation:

Around 40 cautionary signs are officially codified under IRC standards, all triangular with a red border and black symbols.

Question 105

A driver sees a blue circular sign with a white left-pointing arrow near a median. What is the correct interpretation?

A. It is an informatory sign with no binding force

B. Vehicles must pass to the left of the sign or median — a mandatory instruction

C. It indicates a parking area to the left

D. It marks a pedestrian crossing zone

Correct Answer: Option (B)

Short Explanation:

A blue circular 'Compulsory Keep Left' sign is a mandatory, legally binding instruction requiring vehicles to pass to the left of the sign or median, not merely informatory guidance.

Question 106

What is the standard colour and shape combination for a cautionary road sign?

A. Blue rectangle

B. Red circle

C. White triangle with a red border, apex up

D. Green octagon

Correct Answer: Option (C)

Short Explanation:

Cautionary signs are triangular, with a red border, white background, apex pointing upward, and a black symbol indicating the specific hazard.

Question 107

What does the 'Men at Work' cautionary sign indicate?

A. A permanent construction site with no traffic impact

B. Roadwork or construction activity ahead

C. A pedestrian-only zone

D. A school zone

Correct Answer: Option (B)

Short Explanation:

The 'Men at Work' sign is a cautionary sign warning drivers of roadwork or construction activity ahead, often paired with barricades and cones.

Question 108

What is the correct colour combination for a kilometre stone marking a National Highway?

A. Green top, white base

B. Yellow top, white base

C. Black top, white base

D. Orange top, white base

Correct Answer: Option (B)

Short Explanation:

National Highway kilometre stones have a yellow top and white base, indicating they are maintained by NHAI or MoRTH.

Question 109

A traveller notices the kilometre stone beside the road has a green top instead of yellow. What should they conclude, and what practical action follows?

A. They are on a National Highway and should expect a 120 km/h limit

B. They are on a State Highway, maintained by the state PWD, and should adjust their speed expectation to the lower state highway limit

C. They are on a rural PMGSY road with no speed limit

D. The colour has no practical significance

Correct Answer: Option (B)

Short Explanation:

A green-topped kilometre stone indicates a State Highway maintained by the state PWD, which may carry different (often lower) speed limits than a National Highway, so the traveller should adjust accordingly.

Question 110

What colour background is used for informatory destination signs on highways?

A. Blue

B. Green

C. Yellow

D. Red

Correct Answer: Option (B)

Short Explanation:

Destination and direction signs on highways use a green background with white lettering, distinguishing them from blue signs used on city roads.

Question 111

What does a triangular road sign generally represent?

A. A mandatory instruction

B. A cautionary warning of a hazard ahead

C. Purely decorative information

D. A toll collection point

Correct Answer: Option (B)

Short Explanation:

Triangular signs, with a red border and apex pointing up, represent cautionary warnings alerting drivers to hazards ahead.

Question 112

What is the shape of most mandatory (regulatory) signs in India, aside from Stop and Give Way?

A. Triangle

B. Circle

C. Rectangle

D. Pentagon

Correct Answer: Option (B)

Short Explanation:

Most mandatory signs are circular, typically with a red border on a white background, except for the two unique shapes used for Stop and Give Way.

Question 113

What does a 'No Parking' sign (single diagonal bar) allow, unlike a 'No Stopping' sign?

A. Nothing — both signs mean the same thing

B. A brief stop to drop off or pick up passengers, if the driver stays with the vehicle

C. Overnight parking only

D. Parking for commercial vehicles only

Correct Answer: Option (B)

Short Explanation:

A No Parking sign allows a brief stop to drop off or pick up passengers as long as the driver remains with the vehicle, while No Stopping does not allow any halt.

Question 114

Which body is responsible for standardising road sign design in India?

A. Bureau of Indian Standards (BIS)

B. Indian Roads Congress (IRC)

C. Reserve Bank of India (RBI)

D. National Highways Authority of India (NHAI) alone

Correct Answer: Option (B)

Short Explanation:

The Indian Roads Congress (IRC) is the body responsible for standardising the shape, colour, and placement of official road signs, primarily through IRC:67-2012.

Question 115

A driver approaches an intersection where a flagger at a construction site signals them to proceed, but a temporary sign a short distance earlier displayed 'Stop.' What should the driver do?

A. Always obey the static sign over any human signal

B. Follow the flagger's live signal, as it reflects the current, real-time situation and overrides the static sign

C. Stop regardless of either signal and wait for police

D. Ignore both and proceed based on personal judgment only

Correct Answer: Option (B)

Short Explanation:

A flagger's live hand signal always takes priority over a static posted sign, since it reflects the current, real-time situation at a construction or temporary zone.

Question 116

What is the purpose of a 'Route Marker' sign on a highway?

A. To indicate nearby fuel stations

B. To show the highway number the driver is currently travelling on

C. To mark a school zone

D. To indicate a toll booth ahead

Correct Answer: Option (B)

Short Explanation:

A route marker displays the number of the highway a driver is currently on, helping confirm they are travelling the correct route.

Question 117

What is a key feature that makes India's newer expressways, such as the Delhi–Mumbai Expressway, different from older highway signage?

A. They use no signage at all

B. They have introduced numbered exits and international-style green guide signage

C. They only use blue rectangular signs

D. They rely solely on GPS with no physical signs

Correct Answer: Option (B)

Short Explanation:

Newer access-controlled expressways have introduced numbered exits and international-style green guide signage, a step up from older highway signage conventions.

Question 118

What does a hand signal of an arm raised with the palm facing oncoming traffic typically mean, when given by a traffic police officer?

A. Go

B. Slow down

C. Stop

D. Turn right

Correct Answer: Option (C)

Short Explanation:

An arm raised with the palm facing oncoming traffic is the standard 'Stop' hand signal used by traffic police officers.

Question 119

A cyclist's rear light has stopped working, and they need to signal a stop to traffic behind them at dusk. What is the recommended self-signalling technique?

A. No signal is needed since cyclists are exempt from signalling

B. Extend an arm downward with the palm facing back to indicate slowing or stopping

C. Wave both arms overhead

D. Continue riding without any signal, relying on other road users to notice

Correct Answer: Option (B)

Short Explanation:

Cyclists and riders without functioning indicators should use manual hand signals — extending an arm downward with the palm facing back signals slowing down or stopping.

Question 120

What does a rectangular road sign with a blue background typically represent on city roads?

A. A cautionary hazard

B. An informatory sign, such as a hospital or petrol pump

C. A mandatory speed limit

D. A temporary construction warning

Correct Answer: Option (B)

Short Explanation:

Rectangular blue-background signs on city and district roads are informatory, providing facility information such as hospitals or petrol pumps.

Question 121

What is a 'Supplementary Plate' in relation to road signs?

A. A spare number plate for a vehicle

B. A smaller text board fitted below a main sign to add detail, like distance or timing

C. A type of mandatory sign

D. A licence plate used only on highways

Correct Answer: Option (B)

Short Explanation:

A supplementary plate is a smaller board fitted below a main sign to provide additional detail, such as distance, timing, or specific conditions.

Question 122

Which of these signs is an example of a mandatory (regulatory) sign?

A. School Ahead

B. Speed Limit sign

C. Petrol Pump sign

D. Hospital sign

Correct Answer: Option (B)

Short Explanation:

A Speed Limit sign, shown as a red circle with a number, is a mandatory sign since it is a legally enforceable instruction.

Question 123

What does 'Horn Prohibited' sign indicate, and where is it commonly placed?

A. No honking allowed; commonly placed near hospitals and schools

B. No parking allowed; placed near toll booths

C. No entry for two-wheelers; placed on highways

D. No U-turn allowed; placed at intersections

Correct Answer: Option (A)

Short Explanation:

The Horn Prohibited sign, a red circle with a crossed-out horn symbol, prohibits honking and is commonly placed near hospitals and schools.

Question 124

What is the correct interpretation of a road marking showing diagonal stripes in a hatched pattern?

A. A pedestrian crossing zone

B. An area that must not be entered by vehicles, often separating traffic flows or marking a merge zone

C. A designated cycling lane

D. A temporary parking zone

Correct Answer: Option (B)

Short Explanation:

Hatched markings are diagonally striped areas that vehicles must not enter, typically used to separate opposing traffic flows or mark a merge zone.

Question 125

A learner driver mixes up 'No Entry' and 'One Way' signs during a test. What is the clearest distinction between the two?

A. They mean exactly the same thing

B. No Entry closes a specific direction completely; One Way means the road remains open, but only in one direction

C. One Way applies only to two-wheelers

D. No Entry applies only at night

Correct Answer: Option (B)

Short Explanation:

No Entry means a specific direction is completely closed to vehicles, while One Way means the road itself stays open, but traffic may move only in one direction — the two are often placed together but mean different things.

Question 126

What is the purpose of 'Rumble Strips' on a road?

A. To decorate the road surface

B. To create vibration and sound alerting drowsy or distracted drivers

C. To mark a pedestrian crossing

D. To indicate a toll plaza ahead

Correct Answer: Option (B)

Short Explanation:

Rumble strips are raised strips that create vibration and sound to alert drowsy or distracted drivers, often placed before toll plazas or sharp curves.

Question 127

Which of the following is an example of a temporary road sign?

A. A permanent Stop sign

B. A 'Road Closed' or 'Diversion' board near construction

C. A National Highway route marker

D. A permanent Speed Limit sign

Correct Answer: Option (B)

Short Explanation:

Temporary signs, such as 'Road Closed' or 'Diversion' boards, communicate short-term changes like roadwork and are typically portable and high-visibility.

Question 128

What is the typical colour used for temporary construction signage in India, to ensure high visibility?

A. Blue

B. Orange or red, often with reflective strips

C. Black and white only

D. Pastel green

Correct Answer: Option (B)

Short Explanation:

Temporary signs use high-visibility orange or red colouring, often with reflective strips, so they remain visible even at night.

Question 129

What is a 'Guide Sign' another name for?

A. A mandatory sign

B. A cautionary sign

C. An informatory sign

D. A temporary sign

Correct Answer: Option (C)

Short Explanation:

'Guide sign' is another name for an informatory sign, which provides helpful directions or facility information without being legally enforceable in the same way as mandatory signs.

Question 130

A driver on an unfamiliar road sees a sign whose colour is faded beyond recognition, but the shape is clearly an octagon. What is the safest interpretation and action?

A. Ignore it since the colour cannot be confirmed

B. Treat it as a Stop sign, since the octagon shape alone is enough to identify it, and stop completely

C. Treat it as a Give Way sign, since colour cannot be confirmed

D. Proceed at normal speed since the sign cannot be read

Correct Answer: Option (B)

Short Explanation:

The octagon shape is deliberately unique to the Stop sign, precisely so it remains recognisable even when faded or damaged — the driver should treat it as a Stop sign and stop completely.

Question 131

What does the 'School Ahead' sign warn drivers about?

A. A toll booth ahead

B. A school is nearby and children may be crossing

C. A railway crossing ahead

D. A steep descent ahead

Correct Answer: Option (B)

Short Explanation:

The School Ahead cautionary sign warns drivers that a school is nearby and children may cross the road unpredictably.

Question 132

What is the shape of an 'Informatory' sign typically found on Indian roads?

A. Triangle

B. Circle

C. Rectangle

D. Inverted triangle

Correct Answer: Option (C)

Short Explanation:

Informatory signs are rectangular, using blue backgrounds on city roads and green backgrounds on highways.

Question 133

What does a 'Pedestrians Prohibited' sign indicate?

A. Pedestrians must cross only at marked points

B. Pedestrians may not use that stretch of road at all

C. Only elderly pedestrians are restricted

D. Pedestrians must wear reflective gear

Correct Answer: Option (B)

Short Explanation:

A Pedestrians Prohibited sign, a red circle with a crossed-out walking figure, indicates that pedestrians may not use that stretch of road at all, common on expressways.

Question 134

What is the correct colour for a kilometre stone on a rural or village road, often under the PMGSY scheme?

A. Yellow top, white base

B. Green top, white base

C. Orange top, white base

D. Black top, white base

Correct Answer: Option (C)

Short Explanation:

Rural or village roads, often maintained under the PMGSY scheme, use kilometre stones with an orange top and white base.

Question 135

A driver on a district road notices a black-topped kilometre stone, then later a stretch with an orange-topped one. What does this transition most likely indicate?

A. No change in road authority or type

B. A transition from a district/city road to a rural or PMGSY village road

C. A transition from a National Highway to an expressway

D. A malfunctioning or incorrectly installed marker

Correct Answer: Option (B)

Short Explanation:

A shift from black-topped (district/city road) to orange-topped (rural/PMGSY road) kilometre stones indicates the driver has moved from a district road onto a rural village road, which may have different conditions and lower design standards.

Question 136

What does a road symbol showing a bicycle typically mark?

A. A no-parking zone

B. A dedicated cycle lane or track

C. A pedestrian crossing

D. A bus-only lane

Correct Answer: Option (B)

Short Explanation:

A cycle symbol painted on the road marks a dedicated cycle lane or track for bicycle use.

Question 137

What is the main function of 'Directional Arrows' painted on a carriageway?

A. To indicate the age of the road surface

B. To show permitted lane movements, such as straight, turn, or merge

C. To mark pedestrian zones only

D. To indicate speed limits

Correct Answer: Option (B)

Short Explanation:

Directional arrows painted on the carriageway show permitted lane movements — straight ahead, turning, or merging — helping drivers position correctly in advance.

Question 138

What hand signal does a traffic police officer typically use to indicate 'Go'?

A. Arm raised, palm facing oncoming traffic

B. Arm extended, palm down, moved forward

C. Palm down, moved up and down repeatedly

D. Both arms crossed overhead

Correct Answer: Option (B)

Short Explanation:

The 'Go' signal is typically given with the arm extended, palm facing down, and moved forward in the direction traffic should proceed.

Question 139

Which of these signs would most likely be found near a hospital in a city?

A. A green rectangular highway destination sign

B. A blue square informatory sign with a bed and red cross symbol

C. A yellow triangular warning sign

D. A red octagonal Stop sign

Correct Answer: Option (B)

Short Explanation:

An informatory Hospital sign is typically a blue square with a bed and red cross symbol, indicating a hospital or medical facility nearby.

Question 140

A driver sees a road marking with a pedestrian symbol just before a set of alternating white stripes across the carriageway. What combined instruction does this represent?

A. A cycling lane only, unrelated to pedestrians

B. An upcoming zebra crossing where pedestrians have absolute right of way

C. A temporary construction detour

D. A restricted zone for pedestrians only, banning vehicles entirely

Correct Answer: Option (B)

Short Explanation:

The pedestrian symbol combined with alternating white stripes (the zebra crossing pattern) signals an upcoming pedestrian crossing where pedestrians have absolute right of way, and drivers must be prepared to stop.

Question 141

What is the primary purpose of an 'Informatory' sign?

A. To enforce a legal driving restriction

B. To provide directions, distances, and facility information

C. To indicate mandatory speed limits

D. To warn of an immediate hazard

Correct Answer: Option (B)

Short Explanation:

Informatory signs provide directions, distances, and facility information, helping drivers navigate rather than enforcing a legal restriction.

Question 142

What does the 'Compulsory Ahead' sign (blue circle, white arrow) require a driver to do?

A. Turn left only

B. Travel only in the direction shown by the arrow

C. Stop and wait for further instructions

D. Give way to all oncoming traffic

Correct Answer: Option (B)

Short Explanation:

A Compulsory Ahead sign is a positive mandatory instruction requiring the driver to travel only in the direction shown by the arrow.

Question 143

What is the significance of the IRC:67-2012 standard?

A. It governs vehicle emission norms

B. It is the Code of Practice for Road Signs in India

C. It sets vehicle insurance premiums

D. It regulates driving licence fees

Correct Answer: Option (B)

Short Explanation:

IRC:67-2012 is the Indian Roads Congress's Code of Practice for Road Signs, defining the shape, colour, symbol, and placement of official signs.

Question 144

What does a road sign showing a cow or animal silhouette inside a triangular border indicate?

A. A veterinary clinic ahead

B. Animals may be crossing or present on the road

C. A farming zone with no traffic

D. A prohibited zone for livestock transport vehicles

Correct Answer: Option (B)

Short Explanation:

The Cattle cautionary sign warns drivers that animals may be crossing or present on the road ahead, common in rural areas.

Question 145

A construction zone has cones channelling traffic into a single lane, a 'Men at Work' sign, and a diversion board — but no human flagger is present. How should a driver proceed?

A. Follow the static signage and markings carefully, since no flagger is present to override them

B. Ignore all signage since no flagger is present to enforce it

C. Wait indefinitely until a flagger appears

D. Proceed at normal highway speed since work zones without flaggers are not legally binding

Correct Answer: Option (A)

Short Explanation:

In the absence of a flagger, the static signage, cones, and diversion boards remain the binding guidance, and the driver should follow them carefully and reduce speed appropriately.

Question 146

Which shape is used for a 'Narrow Bridge' cautionary sign?

A. Circle

B. Triangle

C. Rectangle

D. Pentagon

Correct Answer: Option (B)

Short Explanation:

The Narrow Bridge sign is a triangular cautionary sign, warning that the bridge ahead is narrower than the approach road.

Question 147

What does the 'Width/Height Limit' mandatory sign indicate?

A. The minimum speed required on that stretch

B. Vehicles exceeding the stated dimension may not proceed

C. Only two-wheelers may use that road

D. The road is closed to all vehicles

Correct Answer: Option (B)

Short Explanation:

A Width/Height Limit sign, shown as a red circle with a numeric value, indicates that vehicles exceeding that dimension may not proceed on that stretch.

Question 148

What does a 'Ferry' informatory sign indicate to a driver?

A. A toll booth ahead

B. A water-crossing service ahead

C. A fuel station ahead

D. A railway station ahead

Correct Answer: Option (B)

Short Explanation:

A Ferry sign indicates a water-crossing service ahead, informing drivers of an alternative crossing method where roads do not continue directly.

Question 149

What does a triangular sign with a zigzag or curved arrow typically represent?

A. A speed limit change

B. A hairpin bend or series of curves ahead

C. A school zone

D. A no-overtaking zone

Correct Answer: Option (B)

Short Explanation:

A triangular sign with a zigzag or curved arrow represents a hairpin bend or a series of curves ahead, common in hilly terrain.

Question 150

A driver sees both a 'No Parking' sign (blue circle, single diagonal bar) and, a little further along, a 'No Stopping' sign (blue circle, double diagonal bar) on the same stretch of road. What should the driver conclude about this stretch?

A. Both signs are redundant and mean the same thing

B. The road transitions from an area allowing brief stops to a stricter zone where no halt is permitted at all

C. The second sign cancels the first, so stopping is allowed everywhere

D. Only commercial vehicles are affected by either sign

Correct Answer: Option (B)

Short Explanation:

Since No Parking permits a brief stop with the driver present while No Stopping permits no halt at all, the transition indicates the road moves from a zone allowing brief stops into a stricter zone where no stopping is permitted for any reason.

Question 151

What is the core principle of 'Defensive Driving'?

A. Driving as fast as traffic allows

B. Assuming other road users may make mistakes and keeping a safety margin

C. Only driving during daylight hours

D. Following the vehicle ahead as closely as possible

Correct Answer: Option (B)

Short Explanation:

Defensive driving assumes other road users may make mistakes and keeps enough space, speed, and attention in reserve to respond safely.

Question 152

What does the 'Scan' step in the Scan–Predict–Decide–Act cycle involve?

A. Accelerating past hazards quickly

B. Continuously checking the road and mirrors for hazards

C. Only checking the rearview mirror once per trip

D. Ignoring peripheral traffic

Correct Answer: Option (B)

Short Explanation:

The Scan step involves continuously checking the road and mirrors for hazards, forming the basis for anticipating and responding to danger.

Question 153

Why should headlights be dipped for oncoming traffic at night?

A. To save battery power

B. To avoid dazzling the oncoming driver and causing glare-related accidents

C. Because it is only a courtesy, not a rule

D. To improve fuel efficiency

Correct Answer: Option (B)

Short Explanation:

Dipping headlights avoids dazzling an oncoming driver, whose vision could otherwise be temporarily impaired, increasing accident risk — it is also a legal requirement under CMVR rules.

Question 154

What should a driver do if dazzled by an oncoming vehicle's high beam at night?

A. Flash their own high beam in response

B. Slow down and look toward the left edge of their lane rather than staring back

C. Close their eyes briefly

D. Stop the vehicle immediately in the middle of the road

Correct Answer: Option (B)

Short Explanation:

A dazzled driver should slow down and look toward the left edge of their lane rather than staring at the oncoming light, reducing the risk of losing control.

Question 155

A driver is on a highway at night when dense fog suddenly reduces visibility to near zero. What is the safest sequence of actions?

A. Switch to high beam and continue at reduced speed

B. Switch to fog lamps or low beam, slow down significantly, increase following distance, and pull over safely with hazard lights if visibility remains near zero

C. Stop immediately in the current lane with headlights off

D. Continue at normal speed since fog usually clears quickly

Correct Answer: Option (B)

Short Explanation:

In sudden dense fog, high beam worsens visibility by reflecting off fog droplets; the correct response is fog lamps or low beam, reduced speed, increased following distance, and pulling over safely if visibility remains near zero.

Question 156

What is 'Hydroplaning' (or aquaplaning)?

A. A tyre bursting due to overheating

B. A loss of tyre grip on a wet road due to a layer of water

C. A vehicle skidding on ice

D. A brake failure during heavy rain

Correct Answer: Option (B)

Short Explanation:

Hydroplaning occurs when a layer of water causes a vehicle's tyres to lose contact with the road surface, reducing control significantly.

Question 157

What is the recommended minimum following distance in good daylight conditions, according to Indian road safety guidance?

A. Half a second

B. One second

C. Two seconds

D. Five seconds

Correct Answer: Option (C)

Short Explanation:

Indian road safety guidance recommends a minimum two-second following gap in good daylight conditions, extended further in poor conditions.

Question 158

What is a truck's 'No-Zone'?

A. A zone where trucks are banned from driving

B. The large blind spot areas around a truck where other vehicles vanish from the driver's view

C. A designated truck parking area

D. A speed-restricted zone for heavy vehicles

Correct Answer: Option (B)

Short Explanation:

A truck's 'No-Zone' refers to the large blind spot areas — in front, behind, and along both sides — where other vehicles can disappear from the truck driver's view.

Question 159

A car has been travelling alongside a large truck for some time without overtaking or dropping back. Based on blind spot awareness principles, what risk does this create, and what is the correct action?

A. No risk exists as long as the car stays in its own lane

B. The car may be sitting in the truck's blind spot, invisible to the truck driver; the correct action is to either overtake promptly or drop back out of the blind spot

C. The truck driver is always responsible for spotting the car regardless of position

D. Lingering beside a truck is safer than overtaking or dropping back

Correct Answer: Option (B)

Short Explanation:

Lingering beside a truck risks sitting in its large blind spot, where the truck driver cannot see the car; the correct action is to complete the overtake promptly or drop back to a visible position.

Question 160

What does 'Tailgating' mean in driving terminology?

A. Loading cargo in the boot of a vehicle

B. Following another vehicle too closely for safe stopping

C. Driving with the tailgate open

D. Reversing into a parking spot

Correct Answer: Option (B)

Short Explanation:

Tailgating means following another vehicle too closely, leaving insufficient distance to stop safely if the vehicle ahead brakes suddenly.

Question 161

What is 'Reaction Time' in the context of driving?

A. The time a vehicle takes to reach top speed

B. The time a driver takes to notice and begin responding to a hazard

C. The time taken to fill fuel

D. The time a signal stays green

Correct Answer: Option (B)

Short Explanation:

Reaction time is the time a driver takes to notice a hazard and begin responding to it, a key factor in overall stopping distance.

Question 162

What is the primary risk associated with night driving?

A. Increased fuel consumption

B. Reduced visibility, headlight glare, and driver fatigue

C. Higher toll charges

D. Reduced tyre pressure

Correct Answer: Option (B)

Short Explanation:

Night driving's primary risks are reduced visibility, headlight glare from other vehicles, and increased driver fatigue.

Question 163

What is the correct action for a driver approaching a vehicle stopped ahead at a construction zone, when a flagger signals them to proceed but a static sign said 'Stop'?

A. Always follow the static sign over the flagger

B. Follow the flagger's live signal, since it reflects the current situation

C. Stop regardless and wait for police

D. Proceed only if no other vehicles are visible

Correct Answer: Option (B)

Short Explanation:

A flagger's live signal reflects the current, real-time situation and takes priority over a static posted sign.

Question 164

What should a driver do before overtaking on a highway?

A. Only check the side mirror

B. Ensure the road ahead is visible far enough to complete the manoeuvre and return safely

C. Sound the horn and overtake immediately

D. Overtake only if travelling below the speed limit

Correct Answer: Option (B)

Short Explanation:

Before overtaking, a driver should ensure the road ahead is visible far enough to complete the manoeuvre and return to the lane with a safe margin.

Question 165

A driver is turning left at a city intersection. Just as they begin the turn, they notice a two-wheeler approaching from behind on their left side. What is the safest course of action?

A. Continue the turn immediately since they had already signalled

B. Check the left mirror and blind spot carefully and yield to the two-wheeler before completing the turn

C. Speed up to complete the turn before the two-wheeler arrives

D. Turn right instead to avoid the two-wheeler entirely

Correct Answer: Option (B)

Short Explanation:

Two-wheelers undertaking on the left are a common cause of turning collisions in Indian cities; the safe response is to check mirrors and blind spots carefully and yield before completing the turn.

Question 166

What is the purpose of the 'Predict' step in defensive driving?

A. To predict fuel consumption for a trip

B. To anticipate what other road users might do next

C. To estimate arrival time only

D. To predict weather conditions before starting a journey

Correct Answer: Option (B)

Short Explanation:

The Predict step involves anticipating what other road users might do next, allowing the driver to prepare an appropriate response in advance.

Question 167

What is 'Glare' in the context of night driving?

A. A type of tyre wear

B. Temporary loss of vision caused by a bright light, such as an oncoming high beam

C. A dashboard warning light

D. A type of headlight bulb

Correct Answer: Option (B)

Short Explanation:

Glare is a temporary loss of vision caused by a bright light source, such as an oncoming vehicle's high beam, which can impair a driver's ability to see clearly.

Question 168

According to MoRTH data, what percentage of India's 2023 road deaths was linked to overspeeding?

A. 35%

B. 50%

C. 68%

D. 85%

Correct Answer: Option (C)

Short Explanation:

MoRTH's 2023 data shows overspeeding was linked to 68% of India's road deaths, the single largest contributing factor.

Question 169

A driver notices signs of drowsiness two hours into a highway drive: heavy eyelids and drifting concentration. What is the correct response, based on defensive driving principles?

A. Increase speed to reach the destination sooner and end the drive faster

B. Open the windows and turn up music to stay alert while continuing to drive

C. Pull over at the next safe location and rest, since fatigue impairs reaction time similarly to other impairments

D. Continue driving since two hours is within a safe limit regardless of symptoms

Correct Answer: Option (C)

Short Explanation:

Fatigue significantly impairs reaction time and judgement; the correct response to drowsiness is to pull over and rest rather than attempt to push through it.

Question 170

What is 'Stopping Distance' composed of?

A. Only the braking distance

B. Reaction distance plus braking distance

C. Only the reaction distance

D. The distance to the nearest fuel station

Correct Answer: Option (B)

Short Explanation:

Stopping distance is the total of reaction distance (covered while noticing and responding to a hazard) and braking distance (covered while the brakes slow the vehicle).

Question 171

What is 'Road Rage'?

A. A vehicle's top speed rating

B. Aggressive or hostile driver behaviour triggered by frustration or conflict

C. A type of road surface material

D. A government road-widening scheme

Correct Answer: Option (B)

Short Explanation:

Road rage refers to aggressive or hostile driver behaviour triggered by frustration or conflict with other road users.

Question 172

Which of these factors increases both reaction distance and braking distance?

A. Lower vehicle speed

B. Higher vehicle speed

C. New tyres

D. A recently serviced vehicle

Correct Answer: Option (B)

Short Explanation:

Higher vehicle speed increases both the distance covered during reaction time and the distance needed to brake, extending total stopping distance.

Question 173

What is the correct approach when overtaking a vehicle on a highway with multiple vehicles ahead?

A. Overtake all vehicles in a single continuous manoeuvre regardless of number

B. Avoid overtaking more than one vehicle at a time unless the road is clearly wide and empty

C. Always overtake from the left side only

D. Only overtake trucks, never cars

Correct Answer: Option (B)

Short Explanation:

Overtaking more than one vehicle at a time significantly increases risk and should be avoided unless the road is clearly wide and empty.

Question 174

What is the primary purpose of adjusting side mirrors correctly before driving?

A. To see the vehicle's own reflection

B. To maximise the area covered beyond the vehicle's own edge, reducing blind spots

C. To comply with vehicle registration rules only

D. To improve fuel efficiency

Correct Answer: Option (B)

Short Explanation:

Correctly adjusted side mirrors are set so the driver can just see the edge of their own vehicle, maximising the area covered beyond it and reducing blind spots.

Question 175

A driver is being overtaken by another vehicle on a two-lane road. What is the correct behaviour, and why?

A. Accelerate to prevent being overtaken, since it is a matter of pride

B. Maintain a steady or slightly reduced speed and avoid obstructing the manoeuvre, since interfering increases collision risk

C. Move fully into the opposing lane to assist the overtaking vehicle

D. Brake sharply to let the vehicle pass more quickly

Correct Answer: Option (B)

Short Explanation:

A driver being overtaken should maintain a steady or slightly reduced speed and avoid obstructing the manoeuvre; accelerating or interfering significantly increases the risk of a collision during the overtake.

Question 176

What is the safe approach for U-turns while driving?

A. Make U-turns anywhere convenient

B. Make U-turns only where explicitly permitted, with clear visibility in both directions

C. U-turns are never permitted under any circumstance

D. Only permitted for two-wheelers

Correct Answer: Option (B)

Short Explanation:

U-turns should be made only where explicitly permitted, and only after ensuring clear visibility in both directions before starting the manoeuvre.

Question 177

What is the recommended practice for driving on highways regarding rest breaks?

A. No breaks are needed if the driver feels fine

B. Take a break roughly every two hours on long journeys

C. Only take breaks after six hours of continuous driving

D. Breaks are only necessary for commercial drivers

Correct Answer: Option (B)

Short Explanation:

It is recommended to take a break roughly every two hours on long highway journeys to counter the effects of monotony and fatigue.

Question 178

What is the correct driving lane practice on a multi-lane highway?

A. Cruise continuously in the rightmost lane

B. Keep to the left except when overtaking, using the rightmost lane only for overtaking

C. Always stay in the leftmost lane regardless of speed

D. Lane choice does not matter on highways

Correct Answer: Option (B)

Short Explanation:

Drivers should keep to the left lane except when overtaking, using the rightmost lane only for overtaking before returning to the left.

Question 179

A driver approaches a toll plaza where vehicles are frequently changing lanes and slowing unpredictably. What is the most appropriate driving approach?

A. Maintain highway speed to pass through quickly

B. Approach with extra caution, reduced speed, and heightened awareness of unpredictable lane changes

C. Follow the vehicle ahead as closely as possible to prevent others from merging

D. Use the horn continuously while approaching

Correct Answer: Option (B)

Short Explanation:

Toll plazas require extra caution because vehicles frequently change lanes and slow unpredictably; reduced speed and heightened awareness reduce collision risk in this zone.

Question 180

What is the main risk of driving through standing water on a road?

A. Increased fuel consumption only

B. Hydroplaning, where tyres lose contact with the road surface

C. Faster braking response

D. Improved tyre grip

Correct Answer: Option (B)

Short Explanation:

Standing water increases the risk of hydroplaning, where a layer of water causes the tyres to lose contact with the road, reducing control.

Question 181

What does the 'Act' step in the Scan–Predict–Decide–Act cycle involve?

A. Ignoring the identified hazard

B. Acting smoothly and in good time based on the decided response

C. Waiting indefinitely without any action

D. Only acting after a collision occurs

Correct Answer: Option (B)

Short Explanation:

The Act step involves executing the decided response smoothly and in good time, completing the defensive driving cycle.

Question 182

What is 'Following Distance'?

A. The distance a vehicle travels in one day

B. The gap maintained between your vehicle and the one ahead

C. The distance to the nearest highway exit

D. The total length of a vehicle

Correct Answer: Option (B)

Short Explanation:

Following distance is the gap maintained between your vehicle and the one directly ahead, a key factor in avoiding rear-end collisions.

Question 183

What is the correct use of high beam headlights?

A. Always keep high beam on at night for maximum visibility

B. Use high beam only when no oncoming traffic is present, dipping for approaching vehicles

C. Use high beam only in fog for better visibility

D. High beam should never be used under any circumstance

Correct Answer: Option (B)

Short Explanation:

High beam should be used only when no oncoming traffic is present and dipped promptly as another vehicle approaches, to avoid dazzling other drivers.

Question 184

Why is it unsafe to remove a motorcycle rider's helmet immediately after a crash if they are conscious?

A. It is always safe to remove a helmet immediately

B. The helmet helps stabilise the neck, and removing it may risk worsening a spinal injury

C. Helmets have no effect on neck stability

D. Removing a helmet speeds up medical treatment in every case

Correct Answer: Option (B)

Short Explanation:

A helmet helps stabilise the neck of a conscious rider; removing it carelessly could worsen a potential spinal injury, so it should generally be left in place.

Question 185

A driver is approaching a school zone where children may be present, but no reduced speed limit sign is currently visible due to a missing sign. What is the appropriate driving behaviour?

A. Maintain the general road speed limit since no specific sign is visible

B. Voluntarily reduce speed and increase alertness, since children may still be present regardless of missing signage

C. Only slow down if children are physically visible on the road

D. Ignore the school zone entirely since it is not marked

Correct Answer: Option (B)

Short Explanation:

Defensive driving requires anticipating hazards even without explicit signage; a driver should voluntarily reduce speed near a known school zone regardless of a missing sign, since children may still be present.

Question 186

What is the safest response to being cut off suddenly by another vehicle?

A. Immediately retaliate by cutting the other vehicle off in return

B. Brake smoothly and increase following distance rather than reacting aggressively

C. Accelerate to close the gap and prevent the merge

D. Flash headlights repeatedly in anger

Correct Answer: Option (B)

Short Explanation:

The safest response to being cut off is to brake smoothly and increase following distance, avoiding aggressive retaliation that increases risk for everyone.

Question 187

What is a key difference between driving on highways versus city roads?

A. There is no meaningful difference in driving approach

B. Highways involve higher speeds and long monotonous stretches, while city roads involve dense mixed traffic and frequent stops

C. City roads always have higher speed limits than highways

D. Highways require no attention to lane discipline

Correct Answer: Option (B)

Short Explanation:

Highways involve higher legal speeds and long monotonous stretches that can dull attention, while city roads involve dense, mixed traffic with frequent stop-start conditions requiring patience.

Question 188

What is the safest driving etiquette when a vehicle wants to merge into your lane from a service road?

A. Speed up to close the gap and prevent merging

B. Allow the merging vehicle a fair gap rather than closing it deliberately

C. Merging vehicles have no right to be accommodated

D. Always force merging vehicles to wait indefinitely

Correct Answer: Option (B)

Short Explanation:

Good driving etiquette involves allowing a merging vehicle a fair gap rather than deliberately closing it, which reduces conflict and improves overall traffic flow.

Question 189

MoRTH data shows highways account for a disproportionately large share of accidents and fatalities relative to their length. What is the most likely underlying reason, based on principles covered in this series?

A. Highways have poorly maintained surfaces compared to city roads

B. Higher permitted speeds on highways increase the severity of any collision that occurs, even if the frequency of minor incidents is lower than in cities

C. Highways have significantly more traffic police than city roads

D. Highway drivers are statistically less experienced than city drivers

Correct Answer: Option (B)

Short Explanation:

Higher permitted speeds on highways increase the severity of collisions, meaning even a proportionally smaller number of incidents can result in a disproportionately higher share of serious injuries and fatalities.

Question 190

What does 'No-Zone' awareness primarily help prevent?

A. Vehicle theft

B. Collisions caused by driving in another vehicle's blind spot, especially near trucks and buses

C. Fuel wastage

D. Engine overheating

Correct Answer: Option (B)

Short Explanation:

No-Zone awareness helps prevent collisions caused by lingering in another vehicle's blind spot, which is especially large and dangerous around trucks and buses.

Question 191

What is the safest practice regarding mobile phone use while driving?

A. Use the phone freely as long as one hand remains on the wheel

B. Avoid handling the phone entirely; use voice guidance or pull over safely if needed

C. Only text at traffic signals

D. Phone use is safe as long as speed is below 40 km/h

Correct Answer: Option (B)

Short Explanation:

The safest practice is to avoid handling the phone entirely while driving, relying on voice guidance or pulling over safely if interaction is truly necessary.

Question 192

Which of the following best describes 'Driving Etiquette'?

A. Only the legal minimum required by traffic law

B. Courteous behaviour, such as using indicators and dipping headlights, that goes beyond strict legal requirements

C. A formal driving test conducted by RTOs

D. A vehicle maintenance schedule

Correct Answer: Option (B)

Short Explanation:

Driving etiquette refers to courteous behaviours — such as using indicators as a courtesy and dipping headlights unprompted — that go beyond the strict letter of the law.

Question 193

What should a driver do if their vehicle's lane is ending and merging into another lane on a highway?

A. Force their way in at the last possible moment

B. Signal early, check mirrors and blind spots, and merge smoothly well before the lane ends

C. Stop completely until the other lane clears fully

D. Increase speed dramatically to merge ahead of other vehicles

Correct Answer: Option (B)

Short Explanation:

Safe merging involves signalling early, checking mirrors and blind spots, and merging smoothly well before the lane physically ends, avoiding last-moment manoeuvres.

Question 194

What is the recommended tyre and lighting check before a long highway drive?

A. No check is necessary if the vehicle is relatively new

B. Check tyre pressure, tread depth, and confirm all lights are functioning correctly

C. Only check the fuel gauge before departure

D. Checks are only necessary for commercial vehicles

Correct Answer: Option (B)

Short Explanation:

Before a long highway drive, it is recommended to check tyre pressure and tread depth, and confirm all lights are functioning correctly, since these directly affect safety at higher speeds.

Question 195

A driver on a rain-soaked highway needs to brake suddenly to avoid a hazard, and the vehicle begins to hydroplane. What is the most appropriate response?

A. Brake harder immediately and turn the steering wheel sharply

B. Ease off the accelerator, avoid sudden braking or sharp steering, and allow the tyres to regain contact with the road

C. Accelerate to power through the water

D. Turn off the engine immediately while still moving

Correct Answer: Option (B)

Short Explanation:

During hydroplaning, sudden braking or sharp steering can worsen loss of control; the safer response is to ease off the accelerator and avoid abrupt inputs, allowing the tyres to regain grip.

Question 196

What is the safest approach for a driver feeling road rage building up during a traffic dispute?

A. Escalate the situation to assert authority

B. Stay calm, avoid confrontation, and disengage from the situation safely

C. Follow the other driver to continue the argument

D. Block the other vehicle's path to force a resolution

Correct Answer: Option (B)

Short Explanation:

Staying calm and disengaging safely is the recommended response to a traffic dispute, since road rage significantly increases the risk of a serious incident.

Question 197

What is the primary reason city driving requires more patience than speed?

A. City roads always have higher speed limits

B. Dense traffic, frequent stops, and pedestrians or two-wheelers appearing unpredictably require careful, patient driving

C. Patience has no real safety benefit in cities

D. City roads are generally safer than highways in every respect

Correct Answer: Option (B)

Short Explanation:

City driving involves dense, mixed traffic with frequent stops and unpredictable pedestrian or two-wheeler movement, making patience more valuable than speed for overall safety.

Question 198

What is the correct interpretation of the 'Decide' step in defensive driving?

A. Deciding the vehicle's final destination

B. Choosing the safest response after scanning and predicting potential hazards

C. Deciding which vehicle to purchase

D. Deciding fuel type before a trip

Correct Answer: Option (B)

Short Explanation:

The Decide step involves choosing the safest response after scanning the environment and predicting what other road users might do.

Question 199

A driver has adjusted their mirrors correctly and checks them regularly, yet still nearly changes lanes into another vehicle. What additional safety step, beyond mirror checks, is essential before every lane change?

A. No additional step is needed if mirrors are correctly adjusted

B. A quick shoulder check to cover the blind spot mirrors cannot show

C. Relying solely on the vehicle's indicator sound

D. Assuming other drivers will always avoid a lane change if unsafe

Correct Answer: Option (B)

Short Explanation:

Even correctly adjusted mirrors cannot eliminate blind spots entirely; a quick shoulder check before every lane change is essential to confirm the space is genuinely clear.

Question 200

What is the safest habit regarding vehicle indicators?

A. Use them only when a police officer is visible

B. Use them consistently before every turn or lane change, as a courtesy and a rule

C. Indicators are optional on empty roads

D. Only use indicators at night

Correct Answer: Option (B)

Short Explanation:

Indicators should be used consistently before every turn or lane change, both as a legal requirement and as a courtesy that helps other road users anticipate your movement.

Question 201

Which BIS standard must a legal protective helmet in India conform to?

A. IS 4151

B. IS 1077

C. AIS-145

D. IS 17017

Correct Answer: Option (A)

Short Explanation:

A legal protective helmet in India must conform to BIS standard IS 4151, confirmed by a genuine embossed ISI mark and licence number.

Question 202

Under which section of the Motor Vehicles Act is helmet-wearing compulsory for riders and pillion passengers?

A. Section 112

B. Section 129

C. Section 146

D. Section 185

Correct Answer: Option (B)

Short Explanation:

Section 129 makes wearing a protective helmet compulsory for both the rider and pillion passenger on a two-wheeler.

Question 203

By approximately how much does a genuine ISI helmet reduce the risk of fatal head injury?

A. About 10%

B. About 25%

C. About 42%

D. About 90%

Correct Answer: Option (C)

Short Explanation:

A genuine ISI-marked helmet reduces the risk of fatal head injury by roughly 42%, according to road safety data cited in this series.

Question 204

Under CMVR Rule 138(3), where must seatbelts be worn?

A. Only in the front seats

B. In all seats, front and rear

C. Only by the driver

D. Only in vehicles manufactured after 2020

Correct Answer: Option (B)

Short Explanation:

CMVR Rule 138(3) makes seatbelts mandatory for the driver and every passenger, front or rear.

Question 205

A parent is driving a 2-year-old child (weighing about 14 kg) in the rear seat without any restraint system, believing that holding the child on their lap is sufficient. Based on child restraint regulations, what is wrong with this approach?

A. Nothing is wrong, as long as an adult holds the child

B. A forward-facing seat with a five-point harness is required for a child of this age and weight, not being held on a lap

C. The child should be in the front seat instead

D. Only children over 4 years require any restraint at all

Correct Answer: Option (B)

Short Explanation:

Under CMVR Rule 138, a child in the 15-month to 4-year, up to ~18kg range requires a forward-facing seat with a five-point harness in the rear seat — being held on a lap does not meet this legal or safety requirement.

Question 206

What is an 'ISI Mark'?

A. A vehicle registration number

B. A BIS certification confirming a product meets a specified Indian Standard

C. A type of traffic signal

D. A driving licence category

Correct Answer: Option (B)

Short Explanation:

An ISI Mark is a certification from the Bureau of Indian Standards confirming that a product, such as a helmet or tyre, meets a specified Indian Standard.

Question 207

What is the primary function of an airbag in a vehicle?

A. To replace the need for a seatbelt entirely

B. To inflate rapidly and cushion an occupant during a collision, working together with a fastened seatbelt

C. To improve fuel efficiency

D. To prevent tyre punctures

Correct Answer: Option (B)

Short Explanation:

An airbag inflates rapidly upon sensing sudden deceleration, cushioning an occupant's head and chest — but it is designed to work together with a fastened seatbelt, not replace it.

Question 208

What is the minimum safe tyre tread depth for two- and three-wheeler tyres in India, according to ATMA and BIS guidance?

A. 0.4 mm

B. 0.8 mm

C. 1.6 mm

D. 2.5 mm

Correct Answer: Option (B)

Short Explanation:

The minimum safe tread depth for two- and three-wheeler tyres is 0.8 mm, indicated by the Tread Wear Indicator (TWI) bars.

Question 209

A vehicle has both a fastened seatbelt and functioning airbags, yet the occupant suffers more severe injuries than expected in a moderate collision. Investigators find the seatbelt was worn incorrectly, positioned across the stomach rather than the hips. What does this scenario best illustrate?

A. Airbags alone are always sufficient regardless of seatbelt positioning

B. Correct seatbelt positioning matters because both seatbelts and airbags are designed to work together as a coordinated system

C. Seatbelts have no real safety function when airbags are present

D. The vehicle's airbags must have malfunctioned

Correct Answer: Option (B)

Short Explanation:

This illustrates that seatbelts and airbags are designed as a coordinated system; incorrect seatbelt positioning can reduce the effectiveness of both restraints, even if the airbags themselves function correctly.

Question 210

What is the minimum tyre tread depth required for cars and other motor vehicles (not two/three-wheelers)?

A. 0.8 mm

B. 1.6 mm

C. 2.4 mm

D. 3.2 mm

Correct Answer: Option (B)

Short Explanation:

The minimum safe tread depth for cars and other motor vehicles is 1.6 mm, as indicated by the Tread Wear Indicator bars.

Question 211

What does a 'PUC Certificate' confirm about a vehicle?

A. That the vehicle has valid insurance

B. That the vehicle's emissions are within permitted limits

C. That the vehicle has passed a fitness test

D. That the vehicle's registration is up to date

Correct Answer: Option (B)

Short Explanation:

A Pollution Under Control (PUC) certificate confirms that a vehicle's emissions are within permitted limits and must be renewed periodically.

Question 212

What is the minimum age to hold a licence for a car or geared two-wheeler in India?

A. 16 years

B. 18 years

C. 20 years

D. 21 years

Correct Answer: Option (B)

Short Explanation:

The minimum age to hold a licence for a car or geared two-wheeler is 18 years.

Question 213

When must a private vehicle in India first undergo a mandatory fitness test?

A. Immediately upon registration

B. After 5 years

C. After 15 years from initial registration

D. Fitness tests are not required for private vehicles

Correct Answer: Option (C)

Short Explanation:

Private vehicles do not require a fitness certificate until 15 years from initial registration, after which it must be renewed every 5 years.

Question 214

How often must commercial vehicles undergo a fitness test once they are up to 8 years old?

A. Every year

B. Every 2 years

C. Every 5 years

D. Only once, at registration

Correct Answer: Option (B)

Short Explanation:

Commercial vehicles require a fitness test every 2 years up to 8 years of age, and annually thereafter.

Question 215

A car owner's vehicle is 16 years old and has failed its fitness test twice under the Vehicle Scrappage Policy, 2021. What is the most likely consequence?

A. No consequence, as private vehicles are exempt from scrapping rules

B. The vehicle may be classified as an End-of-Life Vehicle and lose its registration eligibility

C. The owner must simply pay a small renewal fee to continue using it

D. The vehicle automatically qualifies for a permanent registration extension

Correct Answer: Option (B)

Short Explanation:

Under the Vehicle Scrappage Policy, 2021, a private vehicle failing its fitness test twice can be classified as an End-of-Life Vehicle, affecting its eligibility to remain registered and legally on the road.

Question 216

Which section of the Motor Vehicles Act makes third-party insurance compulsory?

A. Section 129

B. Section 146

C. Section 161

D. Section 185

Correct Answer: Option (B)

Short Explanation:

Section 146 makes third-party insurance compulsory for every vehicle used on a public road.

Question 217

What is the penalty for driving an uninsured vehicle for a first offence, under Section 196?

A. No penalty for a first offence

B. Up to 3 months imprisonment and/or a ₹2,000 fine

C. A flat fine of ₹10,000 only

D. Immediate vehicle seizure with no fine

Correct Answer: Option (B)

Short Explanation:

Driving an uninsured vehicle is punishable under Section 196 with up to 3 months imprisonment and/or a ₹2,000 fine for a first offence, rising to ₹4,000 for a repeat offence.

Question 218

What is required for children aged 9 months to 4 years riding pillion on a two-wheeler, under the 2022 CMVR amendment?

A. No restraint is required at this age

B. A crash helmet and a safety harness

C. Only a seatbelt, as used in cars

D. A separate child-sized motorcycle

Correct Answer: Option (B)

Short Explanation:

Under the 2022 amendment to CMVR Rule 138, children aged 9 months to 4 years riding pillion must be secured with a crash helmet and a safety harness.

Question 219

A two-wheeler manufacturer is preparing to comply with new rules effective January 2026. What specific requirement must they meet regarding helmets at the point of sale?

A. No helmet-related requirement applies to manufacturers

B. They must supply two BIS-certified helmets — one for the rider, one for the pillion — with every new two-wheeler sold

C. They must supply only one helmet per two-wheeler sold

D. Helmets must be sold separately and are not the manufacturer's responsibility

Correct Answer: Option (B)

Short Explanation:

From January 2026, manufacturers must supply two BIS-certified helmets — one for the rider and one for the pillion — with every new two-wheeler sold.

Question 220

What is a 'Child Restraint System (CRS)'?

A. A toy fitted in the back seat

B. A certified seat designed to protect a child according to their age, weight, and height

C. A seatbelt reminder alarm

D. A childproof lock on rear doors

Correct Answer: Option (B)

Short Explanation:

A Child Restraint System is a certified seat designed to protect a child according to their specific age, weight, and height category.

Question 221

What standard governs child restraint systems sold in India?

A. AIS-072

B. AIS-145

C. IS 4151

D. IS 17017

Correct Answer: Option (A)

Short Explanation:

AIS-072 is the safety standard governing child restraint systems sold in India.

Question 222

From what age can a child be seated in the front seat of a car, according to child restraint rules?

A. Any age is permitted in the front seat

B. Children under 135 cm in height are prohibited from the front seat, regardless of exact age

C. From age 2 onwards

D. From age 10 onwards

Correct Answer: Option (B)

Short Explanation:

Children under 135 cm in height are prohibited from the front seat, regardless of their exact age, under the amended CMVR Rule 138.

Question 223

When did a driver-side airbag first become mandatory in India?

A. July 2015

B. July 2019

C. January 2022

D. January 2025

Correct Answer: Option (B)

Short Explanation:

A driver-side airbag became mandatory in India from July 2019, followed by a front-passenger airbag mandate from January 2022.

Question 224

What standard governs occupant safety features like airbags and seatbelt reminders in India?

A. AIS-072

B. AIS-145

C. IS 4151

D. BIS QCO

Correct Answer: Option (B)

Short Explanation:

AIS-145 is the Automotive Industry Standard covering airbags, seatbelt reminders, and related occupant safety features.

Question 225

A used car buyer is comparing two 2021-model cars: one has only a driver airbag, and the other has both driver and front-passenger airbags. Based on India's airbag mandate timeline, what does this difference most likely reflect?

A. A manufacturing defect in one of the cars

B. The timing of production relative to the January 2022 front-passenger airbag mandate

C. Random manufacturer choice unrelated to regulation

D. An error in vehicle registration

Correct Answer: Option (B)

Short Explanation:

Since the front-passenger airbag mandate took effect from January 2022 (with phased compliance from 2021), a 2021-model car may have been manufactured before full compliance, explaining the difference in airbag count between similar models.

Question 226

What is 'Active Safety' in vehicle safety terminology?

A. Features that protect occupants during a crash

B. Features that help avoid a crash in the first place, such as brakes and tyres

C. A type of insurance policy

D. A government road safety campaign

Correct Answer: Option (B)

Short Explanation:

Active safety refers to features that help avoid a crash in the first place, such as well-maintained brakes and tyres, as opposed to passive safety features.

Question 227

What must be checked periodically to ensure a vehicle remains legally compliant with emission norms?

A. The vehicle's paint condition

B. The PUC (Pollution Under Control) certificate

C. The vehicle's resale value

D. The number of previous owners

Correct Answer: Option (B)

Short Explanation:

The PUC certificate must be renewed periodically to confirm a vehicle's emissions remain within permitted legal limits.

Question 228

What is required under Section 157 of the Motor Vehicles Act after a vehicle is sold?

A. The buyer must reapply for a new driving licence

B. Insurance must be transferred within 14 days of the sale

C. The vehicle must be repainted

D. A new PUC certificate must be issued immediately

Correct Answer: Option (B)

Short Explanation:

Section 157 requires that a vehicle's insurance be transferred to the new owner within 14 days of its sale.

Question 229

A vehicle owner sells their car but forgets to transfer the insurance within the legally required period. Two months later, the new owner is involved in an accident. What complication does this delay most likely create?

A. No complication, since insurance always transfers automatically

B. Potential coverage and liability issues, since Section 157 requires transfer within 14 days of sale

C. The seller becomes permanently liable for all future accidents involving the vehicle

D. The new owner cannot legally drive the vehicle at all until insurance is transferred, even locally

Correct Answer: Option (B)

Short Explanation:

Failing to transfer insurance within the 14-day window required by Section 157 can create genuine coverage and liability complications for both the buyer and seller in the event of a claim.

Question 230

What is a 'Fitness Certificate' in relation to a vehicle?

A. A document proving a driver's physical fitness

B. Official confirmation that a vehicle meets safety and emission standards for continued road use

C. A gym membership discount for vehicle owners

D. A certificate issued only to electric vehicles

Correct Answer: Option (B)

Short Explanation:

A Fitness Certificate is official confirmation that a vehicle meets safety and emission standards for continued use on public roads.

Question 231

What is 'Passive Safety' in vehicle safety terminology?

A. Features that help avoid a crash

B. Features that protect occupants once a crash is already happening, such as seatbelts and airbags

C. A vehicle's fuel efficiency rating

D. A vehicle's resale value

Correct Answer: Option (B)

Short Explanation:

Passive safety refers to features that protect occupants once a crash is already occurring, such as seatbelts, airbags, and child restraint systems.

Question 232

What does 'TWI' stand for in the context of tyre safety?

A. Tyre Warranty Index

B. Tread Wear Indicator

C. Tyre Weight Instruction

D. Traffic Warning Indicator

Correct Answer: Option (B)

Short Explanation:

TWI stands for Tread Wear Indicator, a marker inside a tyre's grooves showing it has reached its minimum safe tread depth.

Question 233

Since when has an ISI mark been mandatory on tyres sold in India?

A. 1998

B. 2005

C. 2011

D. 2018

Correct Answer: Option (C)

Short Explanation:

An ISI mark has been mandatory on pneumatic tyres sold in India since May 2011, under a BIS Quality Control Order.

Question 234

What documents should a driver be able to produce during a routine check, according to this series?

A. Only the driving licence

B. Registration Certificate (RC), Driving Licence, Insurance Certificate, and PUC Certificate

C. Only proof of vehicle purchase

D. Only a government-issued photo ID

Correct Answer: Option (B)

Short Explanation:

A driver should be able to produce four core documents: the Registration Certificate, Driving Licence, Insurance Certificate, and PUC Certificate, physically or digitally.

Question 235

A traffic officer refuses to accept a driver's insurance certificate shown via the mParivahan app, insisting only a physical copy is valid. Based on official clarifications covered in this series, is the officer correct?

A. Yes, only physical documents are ever legally valid

B. No — DigiLocker and mParivahan documents are legally equivalent to physical originals under the Information Technology Act, 2000, and must be accepted

C. Only driving licences can be shown digitally, not insurance

D. Digital documents are valid only for two-wheelers

Correct Answer: Option (B)

Short Explanation:

A Press Information Bureau clarification confirms that documents on DigiLocker or mParivahan are legally equivalent to physical originals, and traffic authorities are required to accept them.

Question 236

What is the recommended action if a driver notices a dashboard warning light while driving?

A. Ignore it if the vehicle still runs normally

B. Address it promptly rather than ignoring it

C. Only address it during the next scheduled service, regardless of severity

D. Disconnect the dashboard light manually

Correct Answer: Option (B)

Short Explanation:

Dashboard warning lights should be addressed promptly rather than ignored, since they often indicate developing issues that can affect vehicle safety.

Question 237

What is the correct action if a tyre's tread has worn down to the level of the TWI bars?

A. Continue using the tyre until a puncture occurs

B. Replace the tyre, since it has reached its minimum safe tread depth

C. Only replace it if visible cracks are present

D. Rotate the tyre to the front instead of replacing it

Correct Answer: Option (B)

Short Explanation:

Once a tyre's tread wears down to the level of the TWI bars, it has reached its minimum safe depth and should be replaced regardless of other visible condition.

Question 238

What is the purpose of engaging a vehicle's handbrake fully when parking on a slope?

A. To improve fuel efficiency

B. To prevent the vehicle from rolling unintentionally

C. To reduce tyre wear

D. To charge the vehicle's battery

Correct Answer: Option (B)

Short Explanation:

Fully engaging the handbrake when parking on a slope, along with turning the wheels toward the kerb, helps prevent the vehicle from rolling unintentionally.

Question 239

A vehicle inspection reveals worn brake pads, a tyre near its TWI limit, and an expired PUC certificate. Which combination of risk types does this scenario best illustrate?

A. Only a legal compliance risk, with no safety implication

B. Both an active safety risk (worn brakes and tyres affecting crash avoidance) and a legal compliance risk (expired PUC)

C. Only a safety risk, with no legal implication

D. Neither a safety nor a legal risk, since none of these are urgent

Correct Answer: Option (B)

Short Explanation:

Worn brake pads and a near-limit tyre represent active safety risks that reduce the ability to avoid a crash, while an expired PUC certificate represents a separate legal compliance risk — together illustrating how safety and legal issues can compound.

Question 240

What is the purpose of a Registration Certificate (RC)?

A. To confirm a driver's identity only

B. To legally identify a vehicle and its ownership record

C. To confirm insurance coverage

D. To confirm emission compliance

Correct Answer: Option (B)

Short Explanation:

A Registration Certificate legally identifies a vehicle and records its ownership, issued by the jurisdictional Regional Transport Office.

Question 241

What is the validity period of a Learner's Licence (LL) in India?

A. 3 months

B. 6 months

C. 1 year

D. 2 years

Correct Answer: Option (B)

Short Explanation:

A Learner's Licence is valid for 6 months from the date of issue.

Question 242

What must a Learner's Licence holder display while driving?

A. A 'P' sign

B. An 'L' sign, and drive accompanied by a full licence holder

C. No specific sign is required

D. A red triangle on the vehicle roof

Correct Answer: Option (B)

Short Explanation:

A Learner's Licence holder must display an 'L' sign and drive accompanied by a full licence holder in the same vehicle class.

Question 243

What is the minimum age requirement for a Heavy Motor Vehicle (HMV) licence in India?

A. 16 years

B. 18 years

C. 20 years

D. 25 years

Correct Answer: Option (C)

Short Explanation:

The minimum age for a Heavy Motor Vehicle licence, for vehicles over 7,500 kg, is 20 years, along with a separate commercial/transport licence requirement.

Question 244

What is an International Driving Permit (IDP) used for?

A. To drive faster than local speed limits abroad

B. To allow an Indian licence holder to drive in select countries abroad

C. To replace the need for a domestic driving licence entirely

D. To obtain a discount on vehicle insurance

Correct Answer: Option (B)

Short Explanation:

An International Driving Permit allows an Indian licence holder to drive legally in select countries abroad, alongside their domestic licence.

Question 245

A new driver holds a Learner's Licence issued 20 days ago and wants to take the permanent licence driving test immediately. Is this permitted?

A. Yes, the test can be taken at any time after receiving the Learner's Licence

B. No — a Learner's Licence must generally be held for at least 30 days before taking the permanent licence test

C. Yes, but only if accompanied by a driving instructor during the test

D. No, a Learner's Licence holder must wait a full year before testing

Correct Answer: Option (B)

Short Explanation:

A Permanent Driving Licence is generally issued only after holding a Learner's Licence for at least 30 days and then passing the required driving test.

Question 246

What is the minimum compensation for accidental death under the Motor Vehicles (Amendment) Act, 2019?

A. ₹25,000

B. ₹50,000

C. ₹1 lakh

D. ₹2 lakh

Correct Answer: Option (D)

Short Explanation:

The 2019 amendment raised the minimum compensation for accidental death to ₹2 lakh, a significant increase from the earlier ₹25,000.

Question 247

What is the fine range for wrong parking (Section 122) under recent penalty structures?

A. ₹100 – ₹200

B. ₹500 (light vehicle) – ₹1,500 (heavy vehicle), plus towing charges

C. ₹5,000 flat for all vehicles

D. No fine, only a warning

Correct Answer: Option (B)

Short Explanation:

Wrong parking under Section 122 typically carries a fine of ₹500 for light vehicles and up to ₹1,500 for heavy vehicles, plus possible towing charges.

Question 248

What is 'DigiLocker' primarily used for in the context of vehicle documents?

A. Making online insurance payments only

B. Storing legally valid digital copies of documents like the DL, RC, and insurance certificate

C. Booking driving test appointments

D. Filing traffic challans

Correct Answer: Option (B)

Short Explanation:

DigiLocker is a government platform for storing legally valid digital copies of documents such as the driving licence, RC, insurance, and PUC certificate.

Question 249

A rider is stopped for a routine check and has a valid licence, RC, and insurance, but their PUC certificate expired two weeks ago. Based on this series, what is the most accurate consequence?

A. No consequence, since PUC is not a legal requirement

B. The rider can be fined for not having a valid PUC certificate, since it must be renewed periodically to remain compliant

C. The vehicle must be permanently deregistered

D. Only commercial vehicles require a valid PUC certificate

Correct Answer: Option (B)

Short Explanation:

A PUC certificate must be kept valid through periodic renewal; an expired certificate is a genuine compliance failure that can attract a fine, even if all other documents are in order.

Question 250

What is the general rule regarding tyres on the same axle of a vehicle?

A. They can be of any size or type

B. They should match in size and type

C. Only the front axle tyres need to match

D. Tyre matching is only relevant for commercial vehicles

Correct Answer: Option (B)

Short Explanation:

Tyres on the same axle should match in size and type to maintain balanced handling and braking performance.

Question 251

Since Indian traffic keeps to the left, in what order should a pedestrian look before crossing a road?

A. Left, then right

B. Right, then left, then right again

C. Straight ahead only

D. Left, then straight ahead

Correct Answer: Option (B)

Short Explanation:

Since traffic keeps to the left in India, the nearest lane of oncoming vehicles approaches from the right, so pedestrians should look right, then left, then right again before crossing.

Question 252

At a zebra crossing, who generally has the right of way?

A. Vehicles turning left

B. Pedestrians on or entering the crossing

C. Two-wheelers only

D. Whichever party arrives first

Correct Answer: Option (B)

Short Explanation:

Pedestrians on or clearly entering a zebra crossing have the right of way, and drivers are legally required to give way to them.

Question 253

According to MoRTH data, what share of India's total road deaths do pedestrian fatalities represent annually?

A. About 5%

B. About 17%

C. About 35%

D. About 50%

Correct Answer: Option (B)

Short Explanation:

Pedestrian fatalities account for over 17% of India's total road deaths annually, according to MoRTH data.

Question 254

What landmark ruling did the Supreme Court make in June 2026 regarding footpaths?

A. Footpaths are optional infrastructure for municipalities

B. Safe, demarcated footpath access is a fundamental right under Article 21

C. Only cyclists have a right to footpath access

D. Footpaths must be removed from all national highways

Correct Answer: Option (B)

Short Explanation:

In June 2026, the Supreme Court declared that the right to walk on a safe, demarcated footpath is part of the fundamental right to life under Article 21 of the Constitution.

Question 255

A pedestrian is about to cross at a marked zebra crossing when a vehicle approaches without slowing down. Based on the legal framework covered in this series, what is the most accurate description of the situation?

A. The pedestrian has no right of way until they are fully across the road

B. The vehicle is violating the pedestrian's right of way, and Rule 8 of the Rules of the Road Regulations requires drivers to slow down at such crossings

C. The pedestrian must always wait for all vehicles to pass regardless of the crossing

D. Zebra crossings only apply during daylight hours

Correct Answer: Option (B)

Short Explanation:

Rule 8 requires drivers to slow down when approaching a pedestrian or zebra crossing, and pedestrians on or entering the crossing have the right of way — the approaching vehicle is violating this rule.

Question 256

What colour must Indian school buses be painted, according to Supreme Court guidelines?

A. White with blue stripes

B. Golden yellow with a green horizontal stripe

C. Red with white stripes

D. Silver with black stripes

Correct Answer: Option (B)

Short Explanation:

Supreme Court guidelines require school buses to be painted golden yellow with a green horizontal stripe, along with 'SCHOOL BUS' displayed prominently.

Question 257

What is the maximum speed a school bus in India may travel, enforced through a mandatory speed governor?

A. 20 km/h

B. 40 km/h

C. 60 km/h

D. 80 km/h

Correct Answer: Option (B)

Short Explanation:

School buses must carry a speed governor capped at 40 km/h, as required by Supreme Court safety guidelines.

Question 258

What must a driver do at an unguarded ('unmanned') railway level crossing, under Section 131 of the Motor Vehicles Act?

A. Proceed without stopping if no train is visible

B. Stop the vehicle, and have someone check both directions on foot (or check personally if alone) before crossing

C. Only stop if a barrier is physically present

D. Sound the horn continuously and cross immediately

Correct Answer: Option (B)

Short Explanation:

Section 131 requires a driver to stop at an unguarded crossing and have someone check both directions on foot, or check personally if travelling alone, before proceeding.

Question 259

A driver approaches a fully staffed ('manned') railway level crossing and assumes no personal caution is needed since it is staffed. Based on real incidents covered in this series, why is this assumption risky?

A. Manned crossings are always completely safe with zero risk

B. Serious accidents have occurred even at fully staffed crossings, such as the July 2026 Murshidabad accident, showing personal vigilance is still essential

C. Manned crossings do not legally require any driver caution

D. Only unmanned crossings pose any real risk

Correct Answer: Option (B)

Short Explanation:

The July 2026 Murshidabad accident, where a train struck a vehicle at a manned crossing, illustrates that even staffed crossings require personal vigilance and cannot be assumed to be entirely risk-free.

Question 260

What is the standard advice regarding railway crossings, often summarised as three words?

A. Run, Jump, Cross

B. Stop, Look, Listen

C. Honk, Accelerate, Cross

D. Wait, Reverse, Detour

Correct Answer: Option (B)

Short Explanation:

'Stop, Look, Listen' is the standard safety guidance at railway crossings, given that trains require far more distance to stop than road vehicles.

Question 261

What must passengers do behind on a metro platform before a train arrives?

A. Stand as close to the edge as possible

B. Stand behind the marked yellow line until the train has fully stopped

C. Sit on the platform floor

D. Wait near the train doors regardless of markings

Correct Answer: Option (B)

Short Explanation:

Metro passengers must stand behind the marked yellow line until the train has come to a complete stop, for safety.

Question 262

What is a 'Passenger Emergency Alarm (PEA)' on a metro train meant for?

A. Requesting a metro staff member for directions

B. Genuine emergencies only, since misuse is a punishable offence

C. General passenger comfort requests

D. Reporting minor delays

Correct Answer: Option (B)

Short Explanation:

The Passenger Emergency Alarm is meant only for genuine emergencies; using it without a valid reason is a punishable offence under metro operating rules.

Question 263

What penalty can apply for carrying prohibited items, such as explosives or firearms, into metro premises?

A. A verbal warning only

B. Up to 4 years imprisonment and/or a ₹5,000 fine

C. A ₹100 fine only

D. No specific penalty exists

Correct Answer: Option (B)

Short Explanation:

Carrying prohibited items like explosives or firearms into metro premises can attract up to 4 years imprisonment and a fine of ₹5,000, under the Metro Railway (Operation and Maintenance) Act, 2002.

Question 264

What feature do many state transport departments now mandate in app-based cabs and autos for passenger safety?

A. A built-in music system

B. A GPS-linked panic button connecting to a control room

C. Complimentary bottled water

D. A digital fare calculator only

Correct Answer: Option (B)

Short Explanation:

Many state transport departments mandate a GPS-linked panic button in app-based cabs and autos, which sends an SOS signal with location data to a control room.

Question 265

A passenger boards an app-based cab at night and notices the vehicle's registration number does not match the number shown in the app. What is the most appropriate response?

A. Board anyway since minor mismatches are usually harmless

B. Decline to board that vehicle and verify with the app or platform before proceeding

C. Confront the driver aggressively before boarding

D. Board and simply note the mismatch for later, without further action

Correct Answer: Option (B)

Short Explanation:

A registration mismatch is a genuine safety red flag; the safest response is to decline boarding and verify the correct vehicle through the app or platform before proceeding.

Question 266

Is wearing a helmet legally mandatory for adult cyclists in India nationwide?

A. Yes, it is mandatory nationwide

B. No, it is not nationally mandated, but strongly recommended for safety

C. Only mandatory for cyclists over 60 years old

D. Only mandatory on national highways

Correct Answer: Option (B)

Short Explanation:

India does not nationally mandate helmets for adult cyclists, but wearing one is strongly recommended since head injury risk is not reduced simply by lower speed.

Question 267

In which direction should cyclists ride relative to traffic flow?

A. Against the flow of traffic for better visibility

B. With the flow of traffic, never against it

C. Either direction is equally acceptable

D. Only in designated cycling hours

Correct Answer: Option (B)

Short Explanation:

Cyclists must ride in the direction of traffic flow, never against it, to remain predictable to other road users.

Question 268

Based on Kerala's pedestrian safety data cited in this series, which group made up nearly half of all pedestrian deaths in a recent year?

A. Children under 10

B. Senior citizens

C. Tourists

D. Cyclists

Correct Answer: Option (B)

Short Explanation:

In Kerala's pedestrian death data, nearly half of all recorded pedestrian deaths involved senior citizens, reflecting their higher vulnerability due to slower reaction time and mobility.

Question 269

A city wants to reduce pedestrian fatalities among senior citizens near a busy market. Based on this series, which intervention most directly addresses their specific vulnerability?

A. Increasing the speed limit near the market for faster traffic flow

B. Installing signal-controlled or guarded crossings and allowing extra crossing time near the market

C. Removing all footpaths to simplify road design

D. Banning senior citizens from visiting the market

Correct Answer: Option (B)

Short Explanation:

Since senior citizens have slower reaction time and walking speed, signal-controlled or guarded crossings with sufficient crossing time directly address their specific vulnerability, unlike measures that ignore this need.

Question 270

What is 'Tactile Paving' designed to assist with?

A. Improving vehicle traction on wet roads

B. Helping visually impaired pedestrians navigate safely

C. Marking VIP parking zones

D. Indicating a bus-only lane

Correct Answer: Option (B)

Short Explanation:

Tactile paving is textured ground surfacing designed to help visually impaired pedestrians navigate footpaths and crossings safely.

Question 271

What is a 'Foot-Over-Bridge (FOB)'?

A. A bridge exclusively for vehicles

B. An elevated pedestrian crossing structure over a road or railway track

C. A type of railway level crossing

D. A pedestrian waiting shelter

Correct Answer: Option (B)

Short Explanation:

A Foot-Over-Bridge is an elevated pedestrian crossing structure built over a road or railway track, allowing safe crossing without conflicting with traffic.

Question 272

What is the recommended action if you are running to catch a moving bus?

A. Run alongside and jump on once matched in speed

B. Let it go and wait for the next one, since running after a moving bus is a common cause of injury

C. Ask the driver to slow down while running

D. Only attempt this if wearing suitable footwear

Correct Answer: Option (B)

Short Explanation:

It is recommended to let a moving bus go and wait for the next one, since running after a moving bus is a common and entirely avoidable cause of injury.

Question 273

What is 'Encroachment' in the context of footpaths?

A. A government scheme to widen footpaths

B. Unauthorised occupation of public space, such as a footpath, by vendors or parked vehicles

C. A type of pedestrian crossing signal

D. A tax levied on footpath users

Correct Answer: Option (B)

Short Explanation:

Encroachment refers to the unauthorised occupation of public space, such as a footpath, often by vendors, parked vehicles, or construction material, forcing pedestrians onto the road.

Question 274

What legal framework primarily governs safety and conduct rules across India's metro systems?

A. The Motor Vehicles Act, 1988

B. The Metro Railway (Operation and Maintenance) Act, 2002

C. The Indian Railways Act, 1989

D. The Information Technology Act, 2000

Correct Answer: Option (B)

Short Explanation:

The Metro Railway (Operation and Maintenance) Act, 2002 governs safety and conduct rules across India's metro systems, including the Delhi Metro.

Question 275

A footpath near a busy market is fully occupied by vendor stalls, forcing pedestrians to walk on the road. Based on the Supreme Court's June 2026 ruling, what obligation does this situation place on the local municipal authority?

A. No obligation exists, since vendors have priority over pedestrians

B. The municipal authority is obligated to ensure the footpath remains genuinely accessible, since safe footpath access is now a fundamental right

C. The obligation applies only to state governments, not municipal bodies

D. The ruling applies only to newly constructed roads, not existing ones

Correct Answer: Option (B)

Short Explanation:

Since the Supreme Court's June 2026 ruling recognised safe footpath access as a fundamental right under Article 21, municipal and urban local bodies are obligated to ensure footpaths remain genuinely accessible, including addressing encroachment.

Question 276

What is a 'Level Crossing'?

A. A pedestrian crossing painted with white stripes

B. A point where a road crosses a railway track at the same level

C. An elevated highway interchange

D. A parking area near a railway station

Correct Answer: Option (B)

Short Explanation:

A level crossing is a point where a road crosses a railway track at the same level, which may be staffed ('manned') or unstaffed ('unmanned').

Question 277

By when did Indian Railways eliminate all unmanned broad-gauge level crossings?

A. April 2010

B. April 2015

C. April 2019

D. April 2023

Correct Answer: Option (C)

Short Explanation:

Indian Railways eliminated all unmanned broad-gauge level crossings by April 2019, significantly reducing crossing-related accidents.

Question 278

According to NCRB data cited in this series, roughly how many railway crossing accidents were recorded in India between 2014 and 2024?

A. About 2,500

B. About 10,000

C. About 22,695

D. About 50,000

Correct Answer: Option (C)

Short Explanation:

NCRB data records 22,695 railway crossing accidents between 2014 and 2024, with Uttar Pradesh and West Bengal reporting the highest numbers.

Question 279

A city has successfully eliminated all unmanned railway crossings within its limits, yet crossing-related accidents continue to occur at some staffed crossings. What does this indicate about the overall safety strategy needed?

A. Elimination of unmanned crossings alone is sufficient to prevent all crossing accidents

B. Even with unmanned crossings eliminated, driver vigilance and possibly further engineering measures remain necessary at staffed crossings too

C. Staffed crossings should be converted back to unmanned status

D. No further action is needed once unmanned crossings are eliminated

Correct Answer: Option (B)

Short Explanation:

Since accidents can still occur at staffed crossings, eliminating unmanned crossings alone is not sufficient — continued driver vigilance and potentially further engineering improvements remain necessary even at staffed crossings.

Question 280

What is 'Public Service Vehicle' a term for?

A. Any government-owned vehicle

B. A vehicle licensed to carry passengers for hire, such as a bus, taxi, or auto-rickshaw

C. A police patrol vehicle only

D. A vehicle used exclusively for emergency services

Correct Answer: Option (B)

Short Explanation:

A Public Service Vehicle is any vehicle licensed to carry passengers for hire, including buses, taxis, and auto-rickshaws.

Question 281

What is the recommended behaviour when boarding or alighting from a bus?

A. Move quickly without holding any support

B. Hold the handrail while boarding, moving inside, and alighting

C. Board only from the rear door regardless of design

D. Alight while the bus is still moving to save time

Correct Answer: Option (B)

Short Explanation:

Passengers should hold the handrail while boarding, moving inside, and alighting from a bus, to reduce the risk of falls.

Question 282

Which seats on public transport are typically reserved for senior citizens, pregnant women, and persons with disabilities?

A. Seats nearest the driver only

B. Priority seats, often located near doors or the front of the vehicle

C. Seats at the very back only

D. No specific seats are reserved on Indian public transport

Correct Answer: Option (B)

Short Explanation:

Priority seats, often located near doors or at the front, are reserved for senior citizens, pregnant women, and persons with disabilities on most public transport.

Question 283

What should a passenger do before boarding an app-based cab or auto, according to safety best practice?

A. Nothing specific is required

B. Verify that the vehicle registration number and driver details match what is shown in the app

C. Only check the fare estimate

D. Pay the full fare in advance before boarding

Correct Answer: Option (B)

Short Explanation:

Passengers should verify that the vehicle registration number and driver details match what is shown in the app before boarding, especially at night.

Question 284

What is required under newer state rules, such as Chandigarh's Motor Vehicle Aggregator Rules, 2025, before a driver can operate on a ride-sharing platform?

A. No specific requirement beyond owning a vehicle

B. Driver verification and clearance of pending traffic challans

C. A minimum of 10 years of driving experience

D. Ownership of at least two vehicles

Correct Answer: Option (B)

Short Explanation:

Newer state aggregator rules, such as Chandigarh's 2025 rules, require driver verification and clearance of pending traffic challans before a driver can operate on a ride-sharing platform.

Question 285

A commuter regularly walks to a bus stop along a road with no footpath, forcing them onto the carriageway. Based on the principles in this series, which two issues does this situation combine?

A. Only a personal inconvenience with no legal dimension

B. A road safety risk for the pedestrian and a potential violation of their fundamental right to safe footpath access

C. A vehicle registration issue and an insurance issue

D. A cycling safety issue unrelated to pedestrians

Correct Answer: Option (B)

Short Explanation:

This situation combines a direct road safety risk (walking on the carriageway) with a potential violation of the pedestrian's fundamental right to safe footpath access, as recognised by the Supreme Court in June 2026.

Question 286

What should a pedestrian avoid doing while crossing a road, based on WHO-cited research?

A. Walking at a steady pace

B. Using a mobile phone while crossing

C. Making eye contact with drivers

D. Using a marked crossing

Correct Answer: Option (B)

Short Explanation:

The WHO notes that distracted pedestrians using phones are around four times more likely to be involved in an accident, so phone use while crossing should be avoided.

Question 287

What is the recommended practice for school transport safety regarding attendants?

A. Attendants are optional and rarely required

B. A trained attendant should be present on school buses, alongside required safety equipment

C. Only the driver needs to be present, with no additional staff

D. Attendants are required only for buses carrying fewer than 10 students

Correct Answer: Option (B)

Short Explanation:

Supreme Court guidelines require a trained attendant to be present on school buses, alongside equipment such as first-aid boxes, fire extinguishers, and emergency exits.

Question 288

What is one of the main reasons footpaths in Indian cities are frequently unusable, according to this series?

A. Footpaths are never constructed in Indian cities

B. Encroachment by vendors, parked vehicles, and construction material

C. Footpaths are reserved exclusively for cyclists

D. Municipal bodies are legally barred from maintaining footpaths

Correct Answer: Option (B)

Short Explanation:

Footpaths are frequently encroached upon by vendors, parked vehicles, and construction material, forcing pedestrians onto the carriageway despite footpaths technically existing.

Question 289

A metro passenger presses the Passenger Emergency Alarm because they missed their intended stop and want the train to stop again. What is the correct assessment of this action?

A. This is an appropriate use of the alarm, since it caused personal inconvenience

B. This is a misuse of the alarm, since it is reserved for genuine emergencies and misuse is a punishable offence

C. The alarm has no real consequence for non-emergency use

D. Missing a stop is legally classified as an emergency

Correct Answer: Option (B)

Short Explanation:

The Passenger Emergency Alarm is reserved strictly for genuine emergencies; using it to address a missed stop is a misuse of the system and can be a punishable offence.

Question 290

What is the safe practice for cyclists riding at night?

A. No special precautions are needed if roads are well-lit

B. Use reflective clothing and functioning lights

C. Ride only on footpaths at night

D. Remove reflectors to reduce weight

Correct Answer: Option (B)

Short Explanation:

Cyclists riding at night should use reflective clothing and functioning lights to remain visible to other road users, regardless of street lighting.

Question 291

What is a 'Vulnerable Road User'?

A. Any road user driving an old vehicle

B. A road user with little or no protective shell around them during a crash, such as a pedestrian or cyclist

C. Only professional drivers

D. Only vehicle owners without insurance

Correct Answer: Option (B)

Short Explanation:

A vulnerable road user is one with little or no protective shell during a crash, including pedestrians, cyclists, and groups like children and senior citizens.

Question 292

What does the 'School Ahead' cautionary sign indicate to drivers?

A. A toll booth is nearby

B. A school is nearby and children may cross unpredictably

C. A railway crossing is nearby

D. A hospital is nearby

Correct Answer: Option (B)

Short Explanation:

The 'School Ahead' cautionary sign warns drivers that a school is nearby and children may cross the road unpredictably, requiring reduced speed.

Question 293

What is India's approximate share of global road fatalities, despite owning only about 1% of the world's registered vehicles?

A. About 2%

B. About 11%

C. About 25%

D. About 40%

Correct Answer: Option (B)

Short Explanation:

India accounts for roughly 11% of the world's road fatalities despite owning barely 1% of the world's registered vehicles, highlighting a disproportionate safety burden.

Question 294

What is the correct interpretation of 'Right of Way' for traffic already inside a roundabout, relative to traffic entering it?

A. Entering traffic always has priority

B. Traffic already inside the roundabout generally has priority over traffic entering it

C. Right of way does not apply to roundabouts

D. Only two-wheelers have priority in roundabouts

Correct Answer: Option (B)

Short Explanation:

Traffic already inside a roundabout generally has the right of way over traffic attempting to enter it, helping maintain a continuous, safer flow.

Question 295

A city is deciding between two safety investments: hiring more traffic police for general enforcement, or specifically training more crossing guards near schools during arrival and dismissal times. Considering the vulnerability of children as road users, which choice most directly reduces child pedestrian risk?

A. General traffic police enforcement, since it covers a broader area

B. Crossing guards near schools during arrival and dismissal, since this directly targets the times and locations of highest child pedestrian risk

C. Neither option has any measurable effect on child safety

D. Only infrastructure changes, not personnel, can improve child pedestrian safety

Correct Answer: Option (B)

Short Explanation:

Since children are most exposed during school arrival and dismissal times near school zones, dedicated crossing guards at those specific times and locations more directly reduce child pedestrian risk than broader general enforcement.

Question 296

What is the purpose of a 'Give Way Line' near a main road junction?

A. To mark a permanent parking zone

B. To require yielding to traffic on the main road, without always requiring a full stop

C. To indicate a mandatory full stop at all times

D. To mark a pedestrian-only zone

Correct Answer: Option (B)

Short Explanation:

A give way line requires a driver to yield to traffic on the main road, but unlike a stop line, a complete stop is only required if traffic conditions make it necessary.

Question 297

What is the recommended precaution for family members of senior citizens regarding road crossings?

A. No special precaution is needed beyond general awareness

B. Identify and consistently use the nearest signal-controlled crossing or foot-over-bridge, even if it takes longer

C. Encourage senior citizens to cross as quickly as possible to minimise exposure time

D. Avoid allowing senior citizens to walk outside at all

Correct Answer: Option (B)

Short Explanation:

Family members are advised to help identify and consistently use the nearest signal-controlled crossing or foot-over-bridge for senior citizens, even if it takes a little longer, rather than rushing across busy roads.

Question 298

What is the primary reason a flagger's live signal takes priority over a static sign at a construction or accident zone?

A. Flaggers have no real legal authority

B. A flagger's signal reflects the current, real-time situation, which a static sign cannot adjust to

C. Static signs are always outdated by definition

D. Flaggers are only present at night

Correct Answer: Option (B)

Short Explanation:

A flagger's live signal reflects the current, real-time situation at a construction or emergency zone, which a static sign cannot adjust to, giving it priority.

Question 299

A city introduces smart zebra crossings with LED lighting and motion sensors at several high-risk intersections. Based on pilot results cited in this series, what outcome would be a reasonable, evidence-based expectation?

A. No measurable change in pedestrian accidents

B. A reduction in pedestrian accidents of up to around 30% at those locations, based on similar pilot results

C. A guaranteed 100% elimination of pedestrian accidents

D. An increase in accidents due to driver confusion

Correct Answer: Option (B)

Short Explanation:

Pilot smart zebra crossings using LED lighting, motion sensors, and similar features have reduced pedestrian accidents by up to around 30% in trial locations, making this a reasonable, evidence-based expectation.

Question 300

What is the safest action if a pedestrian crossing signal turns red while you are already partway across a road?

A. Reverse back to the starting side immediately

B. Continue to the nearest safe point, since stopping mid-road creates a greater hazard

C. Stop and remain standing in the middle of the road

D. Run diagonally to the nearest footpath, ignoring vehicles

Correct Answer: Option (B)

Short Explanation:

If a signal changes while a pedestrian is already partway across, continuing to the nearest safe point is generally safer than reversing or stopping in the middle of moving traffic.

Question 301

What is the 'Golden Hour' legally defined as, under Section 2(12-A) of the Motor Vehicles Act?

A. The busiest hour of traffic each day

B. The first hour following a traumatic injury

C. The hour reserved for emergency vehicle testing

D. The final hour before a hospital closes

Correct Answer: Option (B)

Short Explanation:

The Golden Hour is legally defined as the first hour following a traumatic injury, when prompt medical care offers the best chance of survival.

Question 302

Which number is India's unified emergency helpline?

A. 100

B. 108

C. 112

D. 1073

Correct Answer: Option (C)

Short Explanation:

112 is India's unified emergency number, connecting to police, fire, and ambulance services under the Emergency Response Support System.

Question 303

Does India's 112 emergency number work without a SIM card?

A. No, a working SIM is always required

B. Yes, it can work without a SIM card and on a locked phone

C. Only on government-issued phones

D. Only during daytime hours

Correct Answer: Option (B)

Short Explanation:

112 can work even without a SIM card, on a locked phone, or with limited network availability, making it accessible in emergencies.

Question 304

What does the Cashless Treatment Scheme, 2025 guarantee to road accident victims?

A. Free treatment for life

B. Free treatment of up to ₹1.5 lakh for the first seven days at designated hospitals

C. A cash reward of ₹1.5 lakh

D. Free ambulance transport only, with no treatment coverage

Correct Answer: Option (B)

Short Explanation:

The Cashless Treatment Scheme, 2025 guarantees free treatment of up to ₹1.5 lakh for the first seven days after an accident, at designated hospitals.

Question 305

An accident victim reaches a non-designated private hospital 20 hours after the accident and receives initial stabilisation there before being referred elsewhere. Based on the Cashless Treatment Scheme, 2025, is this initial stabilisation likely covered?

A. No, only designated hospitals are ever covered under any circumstance

B. Yes, initial stabilisation at a non-designated hospital is covered, and the victim reached care within the required 24-hour window

C. No, since more than 12 hours had passed

D. Coverage depends solely on the victim's nationality

Correct Answer: Option (B)

Short Explanation:

The scheme covers initial stabilisation even at a non-designated hospital, and since the victim reached care within 24 hours of the accident, they would qualify for coverage under the scheme's conditions.

Question 306

What does the 'D' in the DRSABC first-aid framework stand for?

A. Distance

B. Danger

C. Direction

D. Delay

Correct Answer: Option (B)

Short Explanation:

The 'D' in DRSABC stands for Danger — checking that the scene is safe before approaching a victim.

Question 307

What is the correct CPR compression-to-breath ratio for an adult, according to Indian Red Cross Society guidance?

A. 15 compressions to 2 breaths

B. 30 compressions to 2 breaths

C. 50 compressions to 1 breath

D. 10 compressions to 5 breaths

Correct Answer: Option (B)

Short Explanation:

The correct CPR ratio for an adult is 30 chest compressions followed by 2 rescue breaths, repeated as needed.

Question 308

What legal protection do India's Good Samaritan guidelines provide?

A. Financial compensation to helpers only

B. Protection from harassment and repeated questioning for those who help accident victims

C. Automatic immunity from all legal proceedings, regardless of circumstances

D. Protection only for licensed medical professionals

Correct Answer: Option (B)

Short Explanation:

Good Samaritan guidelines protect bystanders who help accident victims from harassment, repeated questioning, and being compelled to disclose their identity.

Question 309

A bystander wants to help an accident victim but hesitates, worried about being detained by police for questioning. Based on the legal framework established after SaveLIFE Foundation vs. Union of India (2016), is this concern justified?

A. Yes, and bystanders should generally avoid helping to prevent legal trouble

B. No — Good Samaritan guidelines specifically protect helpers from harassment and cannot compel them to disclose their identity

C. Only doctors are protected from such concerns

D. Protection only applies if the police are already present at the scene

Correct Answer: Option (B)

Short Explanation:

Following SaveLIFE Foundation vs. Union of India (2016), Good Samaritan guidelines were given binding legal force specifically to protect helpers from harassment, removing the basis for this common hesitation.

Question 310

What is a 'Zero FIR'?

A. An FIR that cannot be filed under any circumstances

B. An FIR that can be filed at any police station, regardless of jurisdiction, and later transferred

C. An FIR with no legal validity

D. An FIR filed only for cases with zero injuries

Correct Answer: Option (B)

Short Explanation:

A Zero FIR can be filed at any police station regardless of where the incident occurred, and is later transferred to the appropriate station with jurisdiction.

Question 311

What is 'e-DAR' in the context of road accidents?

A. A type of emergency ambulance

B. MoRTH's electronic Detailed Accident Report system, a standardised digital accident record

C. A private insurance company

D. A driving licence renewal portal

Correct Answer: Option (B)

Short Explanation:

e-DAR is MoRTH's electronic Detailed Accident Report system, creating a standardised digital record of road accidents used for reporting and claims.

Question 312

What is the Motor Accident Claims Tribunal (MACT) primarily used for?

A. Issuing driving licences

B. Handling third-party compensation claims arising from motor vehicle accidents

C. Renewing vehicle registration

D. Conducting vehicle fitness tests

Correct Answer: Option (B)

Short Explanation:

MACT is a specialised tribunal that handles third-party compensation claims arising from motor vehicle accidents.

Question 313

What is 'No-Fault Liability' compensation under Section 140 of the Motor Vehicles Act?

A. Compensation only available after a lengthy court trial

B. Interim compensation available without first having to prove who was at fault

C. A type of vehicle insurance premium discount

D. Compensation only for vehicle damage, not injury

Correct Answer: Option (B)

Short Explanation:

No-fault liability under Section 140 allows victims to claim interim compensation — ₹50,000 for death or ₹25,000 for permanent disability — without first proving who was at fault.

Question 314

What compensation is available from the Solatium Fund for a hit-and-run death, for accidents on or after 1 April 2022?

A. ₹25,000

B. ₹50,000

C. ₹1 lakh

D. ₹2 lakh

Correct Answer: Option (D)

Short Explanation:

The Solatium Fund provides ₹2 lakh for death in hit-and-run cases occurring on or after 1 April 2022, under Section 161 of the Motor Vehicles Act.

Question 315

A hit-and-run victim's family receives ₹1.5 lakh under the Cashless Treatment Scheme during initial hospital care, and the victim later succumbs to injuries. When filing a Solatium Fund claim for the ₹2 lakh death compensation, what should the family expect?

A. They will receive the full ₹2 lakh in addition to the ₹1.5 lakh already received

B. The ₹1.5 lakh already paid under the Golden Hour scheme will be deducted from the final ₹2 lakh Solatium payout

C. The Cashless Treatment Scheme payment has no relationship to the Solatium Fund claim

D. They must return the ₹1.5 lakh before filing any Solatium claim

Correct Answer: Option (B)

Short Explanation:

Any amount already received under the Golden Hour cashless treatment scheme is deducted from the final Solatium Fund payout, so the family would receive the difference, not the full amount again.

Question 316

Who processes a Solatium Fund claim for a hit-and-run accident?

A. The vehicle's insurance company directly

B. The Claims Inquiry Officer (CIO), typically the officer in charge of the relevant police station

C. The Ministry of Finance

D. The victim's employer

Correct Answer: Option (B)

Short Explanation:

Solatium Fund claims are processed by the Claims Inquiry Officer, typically the officer in charge of the police station where the FIR was registered.

Question 317

What should NOT be done if a helmet is on a conscious motorcycle rider involved in a crash?

A. Leave it in place, since it helps stabilise the neck

B. Remove it immediately regardless of the rider's condition

C. Loosen the strap only, without full removal

D. Replace it with a different helmet

Correct Answer: Option (B)

Short Explanation:

A helmet should not be removed from a conscious rider, since it helps stabilise the neck; removing it carelessly could worsen a potential spinal injury.

Question 318

What is the appropriate first-aid response to severe bleeding from a limb wound?

A. Apply a tourniquet immediately as the first response in all cases

B. Apply firm, direct pressure with a clean cloth, elevating the limb if no fracture is suspected

C. Wash the wound thoroughly with water before doing anything else

D. Leave the wound uncovered to allow air exposure

Correct Answer: Option (B)

Short Explanation:

The first response to severe bleeding is firm, direct pressure with a clean cloth, with the limb elevated if no fracture is suspected; a tourniquet is used only as a last resort for severe, uncontrolled bleeding.

Question 319

At an accident scene, a victim is unconscious but breathing normally, with no signs suggesting a spinal injury. What is the appropriate first-aid position?

A. Leave them flat on their back with no adjustment

B. Place them in the recovery position to keep the airway clear

C. Sit them upright immediately

D. Move them to a standing position to check for injuries

Correct Answer: Option (B)

Short Explanation:

An unconscious but breathing victim, without suspected spinal injury, should be placed in the recovery position to help keep the airway clear and reduce the risk of choking.

Question 320

What is the recommended first step when arriving at an accident scene, before helping any victim?

A. Immediately move the victim to safety regardless of surroundings

B. Check that the scene itself is safe to approach — traffic, fire, fuel leaks

C. Call the victim's family first

D. Take photographs before doing anything else

Correct Answer: Option (B)

Short Explanation:

The first step at any accident scene is to check that it is safe to approach, considering hazards like oncoming traffic, fire, or fuel leaks, before attempting to help.

Question 321

What is the 'Rahveer' scheme designed to encourage?

A. Faster ambulance response times only

B. Good Samaritans helping accident victims within the golden hour, rewarded with ₹25,000

C. Vehicle owners to buy better insurance

D. Hospitals to reduce treatment costs

Correct Answer: Option (B)

Short Explanation:

The Rahveer scheme rewards Good Samaritans who help accident victims within the golden hour with ₹25,000, encouraging faster bystander response.

Question 322

What historic case established that hospitals cannot refuse emergency treatment to accident victims?

A. S. Rajaseekaran vs. Union of India

B. Parmanand Katara vs. Union of India

C. SaveLIFE Foundation vs. Union of India

D. Vishaka vs. State of Rajasthan

Correct Answer: Option (B)

Short Explanation:

Parmanand Katara vs. Union of India (1989) established that no hospital can lawfully refuse emergency treatment to an injured person on procedural grounds.

Question 323

What ruling did the Supreme Court make in S. Rajaseekaran vs. Union of India (2025)?

A. That road accidents should not be reported to police

B. That timely trauma care during the golden hour is part of the fundamental right to life under Article 21

C. That all vehicles must carry first-aid kits by law

D. That hospitals may charge accident victims in advance

Correct Answer: Option (B)

Short Explanation:

In S. Rajaseekaran vs. Union of India (2025), the Supreme Court ruled that timely trauma care during the golden hour is part of the fundamental right to life under Article 21, directly prompting the Cashless Treatment Scheme.

Question 324

What documents are typically required for a Solatium Fund claim?

A. Only a self-declaration form

B. FIR copy, medical records, and identity proof

C. Only the vehicle's registration certificate

D. A court order is required before any documents can be submitted

Correct Answer: Option (B)

Short Explanation:

A Solatium Fund claim typically requires the FIR copy, medical records, and identity proof, submitted to the Claims Inquiry Officer.

Question 325

A family wants to pursue both a Solatium Fund claim and a separate MACT claim for a higher amount, for the same hit-and-run incident. Is this generally possible?

A. Yes, both can always be pursued simultaneously without restriction

B. Generally no — accepting Solatium Fund compensation typically means the family cannot also pursue a separate MACT claim for a higher amount

C. Yes, but only if the vehicle is later identified

D. No, neither claim is ever possible for hit-and-run cases

Correct Answer: Option (B)

Short Explanation:

Accepting Solatium Fund compensation generally precludes also pursuing a separate MACT claim for a higher amount, since the two are largely mutually exclusive paths.

Question 326

What items should a basic roadside emergency kit include?

A. Only a spare tyre

B. A first-aid kit, torch, warning triangle, basic tools, water, and emergency numbers

C. Only a fire extinguisher

D. Only a mobile phone charger

Correct Answer: Option (B)

Short Explanation:

A basic roadside emergency kit should include a first-aid kit, torch, warning triangle or cones, basic tools, drinking water, and a list of emergency numbers.

Question 327

What is the NHAI Highway Helpline number for breakdowns or accidents on national highways?

A. 100

B. 108

C. 1033

D. 1091

Correct Answer: Option (C)

Short Explanation:

1033 is the NHAI Highway Helpline, specifically for breakdowns, accidents, and hazards on national highways.

Question 328

What does Section 134 of the Motor Vehicles Act require of a driver involved in an accident?

A. To leave the scene immediately to avoid liability

B. To give information and render reasonable assistance to the injured

C. To only inform their insurance company

D. To pay compensation directly at the scene

Correct Answer: Option (B)

Short Explanation:

Section 134 requires a driver involved in an accident to give information about the accident and render reasonable assistance to any injured person.

Question 329

A road accident victim's family wants to know why the government introduced the Cashless Treatment Scheme so long after the Golden Hour provision was first written into law. Based on this series, what directly triggered its actual implementation?

A. A routine annual budget allocation with no specific trigger

B. The Supreme Court's 2025 ruling in S. Rajaseekaran vs. Union of India, which directed the government to implement the scheme by a set deadline

C. A private hospital lobbying campaign

D. An international treaty obligation

Correct Answer: Option (B)

Short Explanation:

Although the Golden Hour provision existed in law earlier, it was the Supreme Court's 2025 ruling in S. Rajaseekaran vs. Union of India that directly forced the government to finally notify and implement the Cashless Treatment Scheme.

Question 330

What is the correct way to open a suspected unconscious victim's airway if a spinal injury is possible?

A. Tilt the head back fully as with a standard airway check

B. Use a jaw thrust rather than a head tilt

C. Do not attempt to open the airway under any circumstance

D. Turn the victim onto their stomach immediately

Correct Answer: Option (B)

Short Explanation:

When a spinal injury is suspected, a jaw thrust should be used instead of the standard head-tilt method, to avoid worsening a potential neck injury while still opening the airway.

Question 331

What should be shared with emergency services when calling 112 for an accident?

A. Only the caller's name

B. Exact location, number of people injured, and their apparent condition

C. Only the vehicle's registration number

D. Only the time of day

Correct Answer: Option (B)

Short Explanation:

When calling for emergency help, it is important to clearly share the exact location, number of injured people, and their apparent condition, such as consciousness and breathing.

Question 332

What is the recommended action before touching or moving an accident victim, if you have access to gloves?

A. Gloves are unnecessary and can be skipped

B. Wash hands or use gloves if available, to reduce infection risk for both helper and victim

C. Only use gloves if the victim appears unwell

D. Gloves should only be used by medical professionals

Correct Answer: Option (B)

Short Explanation:

Washing hands or using gloves if available before helping a victim reduces infection risk for both the helper and the injured person.

Question 333

What is the typical timeframe within which a hospital must be paid after a cashless treatment claim is approved, under the 2025 scheme?

A. Within 24 hours

B. Within 10 days

C. Within 30 days

D. Within 90 days

Correct Answer: Option (B)

Short Explanation:

Under the Cashless Treatment Scheme, 2025, hospitals must be paid within 10 days of claim approval.

Question 334

What is the recommended maximum compression depth during adult CPR?

A. 1–2 cm

B. 5–6 cm

C. 10–12 cm

D. 15 cm or more

Correct Answer: Option (B)

Short Explanation:

The recommended compression depth during adult CPR is about 5–6 cm, delivered at a rate of 100–120 compressions per minute.

Question 335

A bystander performing CPR on an unresponsive accident victim is unsure whether to continue after a few minutes without a response. Based on standard first-aid guidance, what is the correct approach?

A. Stop immediately after one minute if there is no visible improvement

B. Continue CPR until professional help arrives, the person shows signs of life, or the bystander is physically unable to continue

C. Stop only if the bystander feels the person is beyond help

D. CPR should only be attempted for exactly 30 seconds

Correct Answer: Option (B)

Short Explanation:

Standard first-aid guidance is to continue CPR until professional help arrives, the person shows signs of life, or the bystander becomes physically unable to continue, rather than stopping prematurely based on a fixed short time.

Question 336

What organisation publishes the Indian First Aid Manual referenced in this series?

A. World Health Organization

B. Indian Red Cross Society

C. Ministry of Home Affairs

D. National Highways Authority of India

Correct Answer: Option (B)

Short Explanation:

The Indian Red Cross Society publishes the Indian First Aid Manual, a key reference for basic first-aid guidance in India.

Question 337

What is the recommended response if visibility drops to near zero due to fog while driving, in relation to accident prevention?

A. Continue driving at normal speed to clear the area faster

B. Pull over safely, switch on hazard lights, and wait rather than continuing to drive

C. Switch to high beam and proceed cautiously

D. Follow the vehicle ahead as closely as possible for guidance

Correct Answer: Option (B)

Short Explanation:

If visibility drops to near zero, the safest response is to pull over safely, switch on hazard lights, and wait rather than continuing to drive, reducing the risk of a collision.

Question 338

What is the primary purpose of collecting witness contact details at an accident scene?

A. To assign blame immediately at the scene

B. To support later reporting, insurance claims, and legal processes

C. To determine the exact speed of vehicles involved

D. Witness details are not useful for any purpose

Correct Answer: Option (B)

Short Explanation:

Collecting witness contact details supports later reporting, insurance claims, and legal processes, since witnesses may not remain at the scene indefinitely.

Question 339

An accident victim's family wants to claim compensation quickly, but the responsible vehicle fled the scene and cannot be traced despite police efforts. Which compensation pathway is specifically designed for this exact situation?

A. A standard MACT claim against the identified driver

B. The Solatium Fund, which compensates hit-and-run victims without requiring the vehicle to be identified

C. No compensation is available if the vehicle cannot be traced

D. Only private insurance can address this situation

Correct Answer: Option (B)

Short Explanation:

The Solatium Fund is specifically designed for situations where the responsible vehicle cannot be traced, providing compensation without requiring vehicle identification.

Question 340

What is the correct approach if you are unsure whether an accident victim has a spinal injury?

A. Move them to a more comfortable position immediately

B. Assume a spinal injury is possible and avoid unnecessary movement until professional help arrives

C. Only worry about spinal injury if the person is unconscious

D. Sit the person upright to check for pain

Correct Answer: Option (B)

Short Explanation:

When in doubt, it is safest to assume a spinal injury is possible in any high-speed collision or fall, and avoid unnecessary movement of the victim until professional help arrives.

Question 341

What is the meaning of 'ERSS' in relation to India's emergency helpline system?

A. Emergency Road Safety System

B. Emergency Response Support System

C. Electronic Rescue Signal System

D. Emergency Registration and Safety Service

Correct Answer: Option (B)

Short Explanation:

ERSS stands for Emergency Response Support System, the Ministry of Home Affairs initiative behind India's unified 112 emergency number.

Question 342

What is the recommended action for a driver who witnesses a road accident while driving past?

A. Continue driving without stopping to avoid delays

B. Stop safely if possible, call 112, and help if it is safe to do so

C. Only stop if requested by another driver

D. Take a photo and continue without further involvement

Correct Answer: Option (B)

Short Explanation:

A driver who witnesses an accident should stop safely if possible, call 112, and help if it is safe to do so, supported by Good Samaritan legal protections.

Question 343

What is the correct definition of a 'Good Samaritan' in Indian road safety law?

A. Only a licensed doctor who provides medical aid

B. A bystander who voluntarily helps an accident victim, protected by law from harassment

C. A traffic police officer at the scene of an accident

D. An insurance agent processing a claim

Correct Answer: Option (B)

Short Explanation:

A Good Samaritan is any bystander who voluntarily helps an accident victim, and is legally protected from harassment under Good Samaritan guidelines.

Question 344

What is the primary reason human reaction time (about 2.5 seconds) is often inadequate at railway crossings?

A. Trains always stop instantly when a driver reacts

B. Trains travelling at 100–120 km/h require far more distance to stop or for a driver to safely judge their speed and distance

C. Reaction time has no relevance to railway crossing safety

D. Railway crossings do not require any driver reaction at all

Correct Answer: Option (B)

Short Explanation:

Trains travelling at 100–120 km/h cover significant distance very quickly, and a typical human reaction time of about 2.5 seconds is often inadequate to correctly judge a train's true speed and safely react.

Question 345

A witness to an accident wants to help but does not know first aid and is worried about doing more harm than good. Based on this series, what is the most appropriate action they can still take?

A. Do nothing at all, since only trained professionals should ever help

B. Call 112 immediately, ensure scene safety, and provide comfort and reassurance to the victim while waiting for trained help, without attempting unfamiliar medical procedures

C. Attempt full CPR regardless of training, since any action is better than none

D. Move the victim to a hospital themselves without waiting for an ambulance

Correct Answer: Option (B)

Short Explanation:

Even without first-aid training, a witness can meaningfully help by calling 112 immediately, ensuring scene safety, and providing comfort to the victim, without attempting unfamiliar medical procedures that could cause harm.

Question 346

What is the correct action if an accident victim's bleeding does not stop with direct pressure?

A. Remove the pressure and try a different, unrelated technique

B. Maintain firm pressure, consider elevating the limb, and use a tourniquet only as a last resort for severe limb bleeding

C. Wait several minutes before trying any further action

D. Apply ice directly to the open wound

Correct Answer: Option (B)

Short Explanation:

If bleeding does not stop with direct pressure, maintaining firm pressure and elevating the limb is the next step, with a tourniquet used only as a last resort for severe, uncontrolled limb bleeding, noting the time it was applied.

Question 347

What is the primary function of the National Health Authority (NHA) in relation to the Cashless Treatment Scheme, 2025?

A. Issuing driving licences

B. Implementing the scheme through an online Transaction Management System linked to e-DAR

C. Conducting vehicle fitness tests

D. Investigating traffic violations

Correct Answer: Option (B)

Short Explanation:

The National Health Authority implements the Cashless Treatment Scheme through an online Transaction Management System linked to MoRTH's e-DAR platform.

Question 348

What is the recommended response if you are dazzled by an oncoming vehicle's headlights while responding to an emergency at night?

A. Stare directly at the light to adjust faster

B. Slow down and look toward the left edge of your lane until it passes

C. Close your eyes briefly while continuing to drive

D. Flash your own headlights repeatedly in response

Correct Answer: Option (B)

Short Explanation:

If dazzled by oncoming headlights, the safe response is to slow down and look toward the left edge of the lane rather than staring at the light, reducing the risk of losing control.

Question 349

A road safety educator is designing a short public awareness message about emergency preparedness. Based on the key themes of this series, which single message would most effectively summarise the combined value of the golden hour concept and Good Samaritan protections?

A. Emergency response is solely the government's responsibility

B. Acting quickly and helping without hesitation genuinely saves lives, and the law protects those who do

C. Only trained medical professionals should ever respond to accidents

D. Emergency numbers should only be used for very serious accidents

Correct Answer: Option (B)

Short Explanation:

The combined value of the golden hour concept and Good Samaritan protections is best summarised by encouraging quick, confident action from ordinary bystanders, reassured that the law protects rather than punishes those who help.

Question 350

What is the correct first action if you find yourself involved in a road accident and are not seriously injured?

A. Immediately leave the scene to avoid conflict

B. Ensure safety, check on other involved parties, and call emergency services if needed

C. Negotiate compensation directly with the other driver before involving police

D. Wait for someone else to take charge of the situation

Correct Answer: Option (B)

Short Explanation:

If involved in an accident and not seriously injured, the correct first action is to ensure safety, check on other involved parties, and call emergency services if needed, before addressing other matters like reporting or compensation.

Question 351

When did the Motor Vehicles Act, 1988 come into effect?

A. 1 January 1988

B. 1 July 1989

C. 1 September 2019

D. 1 April 2020

Correct Answer: Option (B)

Short Explanation:

The Motor Vehicles Act, 1988 came into effect on 1 July 1989, replacing the earlier Motor Vehicles Act of 1939.

Question 352

When did the major Motor Vehicles (Amendment) Act, 2019 come into force?

A. 1 July 1989

B. 1 January 2018

C. 1 September 2019

D. 1 April 2021

Correct Answer: Option (C)

Short Explanation:

The Motor Vehicles (Amendment) Act, 2019 came into force from 1 September 2019, raising penalties and introducing digital enforcement.

Question 353

What is a 'Compoundable Offence' under Indian traffic law?

A. An offence that always requires imprisonment

B. A violation that can be settled by paying a fine, without a court appearance

C. An offence that can never be resolved

D. An offence only applicable to commercial vehicles

Correct Answer: Option (B)

Short Explanation:

A compoundable offence, such as speeding or wrong parking, can be settled by paying a fine, often online, without needing a court appearance.

Question 354

Which of these is classified as a 'Non-Compoundable Offence'?

A. Minor overspeeding

B. Wrong parking

C. Drunk driving above the legal limit

D. Signal jumping with no injury

Correct Answer: Option (C)

Short Explanation:

Drunk driving above the legal limit is non-compoundable and must proceed directly to a magistrate court, unlike most minor traffic violations.

Question 355

A driver receives two separate challans in the same month: one for wrong parking and one for drunk driving above the legal limit. What is the key procedural difference in how these two must be resolved?

A. Both can be settled online with a simple fine payment

B. The wrong parking challan can typically be settled with a fine, while the drunk driving charge is non-compoundable and must go through a magistrate court

C. Both must go through a magistrate court regardless of severity

D. Neither offence can be resolved without a Lok Adalat

Correct Answer: Option (B)

Short Explanation:

Wrong parking is a compoundable offence that can usually be settled with a fine, while drunk driving above the legal limit is non-compoundable and must be resolved through a magistrate court, reflecting its greater severity.

Question 356

What does 'HSRP' stand for?

A. Highway Speed Regulation Plate

B. High Security Registration Plate

C. Heavy Service Route Permit

D. Highway Safety Reporting Portal

Correct Answer: Option (B)

Short Explanation:

HSRP stands for High Security Registration Plate, a tamper-resistant number plate mandatory for every vehicle under Rule 50 of the CMVR, 1989.

Question 357

What feature makes an HSRP tamper-resistant and machine-readable?

A. A simple painted number with no special features

B. A chromium hologram and a laser-etched unique identification number

C. A QR code printed on paper

D. A magnetic strip similar to a bank card

Correct Answer: Option (B)

Short Explanation:

An HSRP includes a chromium hologram and a laser-etched unique identification number, designed to resist tampering and work with automated number-plate recognition systems.

Question 358

Since when must all newly registered vehicles in India be fitted with an HSRP?

A. Since 2010

B. Since April 2019

C. Since 2022

D. Since 2025

Correct Answer: Option (B)

Short Explanation:

Since April 2019, all newly registered vehicles in India must be fitted with a High Security Registration Plate under Rule 50 of the Central Motor Vehicle Rules, 1989.

Question 359

A vehicle registered in 2015 does not yet have an HSRP fitted. Based on this series, what is the vehicle owner's correct course of action?

A. No action is needed, since only vehicles registered after April 2019 require an HSRP permanently

B. Retrofit an HSRP through the RTO or an authorised dealer, since older vehicles must also comply

C. HSRP is optional and can be skipped indefinitely

D. The vehicle must be scrapped immediately

Correct Answer: Option (B)

Short Explanation:

Vehicles registered before April 2019 are required to retrofit an HSRP through their RTO or an authorised dealer, since the requirement extends to older vehicles as well, not only newly registered ones.

Question 360

What is an 'e-Challan'?

A. A physical parking ticket only

B. A digitally issued traffic fine, generated by a camera or handheld device

C. A type of driving licence

D. A vehicle insurance document

Correct Answer: Option (B)

Short Explanation:

An e-Challan is a digitally issued traffic fine, generated either by an automated camera or an officer's handheld device.

Question 361

Which official portal hosts India's central e-challan database?

A. digilocker.gov.in

B. echallan.parivahan.gov.in

C. incometax.gov.in

D. uidai.gov.in

Correct Answer: Option (B)

Short Explanation:

Every e-challan flows into the central database hosted at echallan.parivahan.gov.in, part of the Parivahan Sewa system.

Question 362

What is a 'Virtual Court' in the context of traffic offences?

A. A court that only handles criminal cases

B. An online court that resolves many traffic challans without requiring a physical appearance

C. A court exclusively for commercial vehicle disputes

D. A private arbitration service

Correct Answer: Option (B)

Short Explanation:

A Virtual Court is an online court, backed by the Supreme Court e-Committee's initiative, that resolves many traffic challans digitally without requiring a physical court appearance.

Question 363

After roughly how long is an unresolved e-challan typically transferred to a Virtual Court?

A. 7–15 days

B. 60–90 days

C. 1–2 years

D. 5 years

Correct Answer: Option (B)

Short Explanation:

An unresolved e-challan is generally transferred to a state's Virtual Court after roughly 60–90 days.

Question 364

What is a 'Lok Adalat' in relation to traffic challans?

A. A private legal firm handling traffic cases

B. A 'people's court' offering reduced, final settlements for pending challans

C. An online-only portal with no legal authority

D. A special police unit

Correct Answer: Option (B)

Short Explanation:

A Lok Adalat is a 'people's court' that periodically offers reduced, final settlements for pending traffic challans, though its decisions cannot be appealed.

Question 365

A vehicle owner has multiple pending challans accumulated over two years and wants the fastest, most cost-effective resolution, accepting that the decision will be final. Which option best fits this goal?

A. Ignoring the challans indefinitely

B. Filing a fresh case in a regular magistrate court

C. Attending a Lok Adalat, which offers reduced settlements, understanding the decision cannot be appealed

D. Waiting for the challans to expire automatically

Correct Answer: Option (C)

Short Explanation:

A Lok Adalat offers a faster, reduced-cost settlement for pending challans, making it well suited to someone wanting a quick resolution — but its decisions are final and cannot be appealed, which the owner must accept.

Question 366

Under Section 3 of the Motor Vehicles Act, what is required to drive a motor vehicle in India?

A. A valid PUC certificate only

B. A valid driving licence

C. Only vehicle insurance

D. Only vehicle registration

Correct Answer: Option (B)

Short Explanation:

Section 3 requires every driver to hold a valid driving licence appropriate to the category of vehicle being driven.

Question 367

What does Section 208 of the Motor Vehicles Act relate to?

A. Vehicle registration renewal

B. The summons procedure for unresolved traffic prosecutions

C. Driving licence categories

D. Insurance premium calculation

Correct Answer: Option (B)

Short Explanation:

Section 208 governs the summons procedure used when an unresolved traffic matter proceeds to a magistrate court after remaining unresolved through earlier stages.

Question 368

What is the legal blood alcohol limit for driving in India, under Section 185?

A. 10 mg per 100 ml of blood

B. 30 mg per 100 ml of blood

C. 50 mg per 100 ml of blood

D. 100 mg per 100 ml of blood

Correct Answer: Option (B)

Short Explanation:

Section 185 sets the legal blood alcohol limit at 30 mg per 100 ml of blood; driving above this limit is a punishable, non-compoundable offence.

Question 369

A driver is stopped and found with a blood alcohol level slightly above the legal 30 mg per 100 ml limit for the first time. Based on Section 185 penalties, what is the correct expected consequence?

A. A fine of ₹15,000 and/or up to 2 years imprisonment, since it is a repeat offence

B. A fine of ₹10,000 and/or up to 6 months imprisonment, as this is a first offence

C. No penalty applies for a first-time minor violation

D. Only a verbal warning, with no fine or imprisonment

Correct Answer: Option (B)

Short Explanation:

For a first offence under Section 185, the penalty is a fine of ₹10,000 and/or up to 6 months imprisonment; the higher penalty of ₹15,000 and/or up to 2 years applies only to repeat offences within 3 years.

Question 370

What is the penalty for driving without a valid driving licence, under the 2019 amendment?

A. ₹500

B. ₹1,000

C. ₹5,000

D. ₹10,000

Correct Answer: Option (C)

Short Explanation:

Driving without a valid licence attracts a fine of ₹5,000 under the Motor Vehicles (Amendment) Act, 2019, a significant increase from the earlier ₹500.

Question 371

What is Section 199A of the Motor Vehicles Act primarily concerned with?

A. Vehicle emission standards

B. Responsibility of guardians/owners for offences committed by juvenile drivers

C. Third-party insurance requirements

D. Traffic signal standardisation

Correct Answer: Option (B)

Short Explanation:

Section 199A places responsibility on a vehicle owner or a juvenile's guardian when the juvenile commits a driving offence, reflecting a policy of holding enabling adults accountable.

Question 372

Under Section 199A, what fine can a guardian or vehicle owner face if a juvenile drives and commits an offence?

A. ₹1,000

B. ₹5,000

C. ₹25,000

D. ₹50,000

Correct Answer: Option (C)

Short Explanation:

Under Section 199A, the guardian or vehicle owner can be fined ₹25,000, and the vehicle's registration may also be cancelled.

Question 373

Until what age is a juvenile generally barred from obtaining a driving licence after committing a driving offence, under Section 199A?

A. 18 years

B. 21 years

C. 25 years

D. 30 years

Correct Answer: Option (C)

Short Explanation:

A juvenile who drives and commits an offence is barred from obtaining a driving licence until the age of 25, reflecting the seriousness of underage driving.

Question 374

What are DigiLocker and mParivahan documents legally equivalent to, under a PIB clarification?

A. Draft documents with no legal standing

B. Physical original documents, under the Information Technology Act, 2000

C. Temporary documents valid for 30 days only

D. Documents valid only for two-wheelers

Correct Answer: Option (B)

Short Explanation:

A PIB clarification confirms that documents stored on DigiLocker or mParivahan are legally equivalent to physical originals, under the Information Technology Act, 2000.

Question 375

A parent allows their 16-year-old child to drive the family car to a nearby market 'just this once,' and the child is stopped for a minor signal violation. Based on Section 199A, who bears the primary legal and financial consequence?

A. Only the 16-year-old, who is fully responsible as the driver

B. The parent, as the vehicle owner or guardian, who can be fined ₹25,000 and risk registration cancellation

C. No one, since it was a minor violation

D. The traffic police officer who issued the challan

Correct Answer: Option (B)

Short Explanation:

Under Section 199A, the parent, as the vehicle owner or guardian who enabled the juvenile's driving, bears the primary legal and financial consequence — a ₹25,000 fine and possible registration cancellation — regardless of how minor the violation seemed.

Question 376

What is the correct definition of a 'Fitness Certificate' for a vehicle?

A. A certificate proving the driver's physical fitness

B. Official confirmation that a vehicle meets safety and emission standards for continued road use

C. A gym membership document

D. A medical certificate required only for commercial drivers

Correct Answer: Option (B)

Short Explanation:

A Fitness Certificate officially confirms that a vehicle meets safety and emission standards for continued use on public roads.

Question 377

What is the penalty range for driving without insurance under Section 196, for a first offence?

A. No penalty for a first offence

B. Up to 3 months imprisonment and/or ₹2,000

C. A flat ₹10,000 fine only

D. Immediate permanent licence cancellation

Correct Answer: Option (B)

Short Explanation:

Driving an uninsured vehicle is punishable under Section 196 with up to 3 months imprisonment and/or a ₹2,000 fine for a first offence, rising to ₹4,000 for a repeat offence.

Question 378

What body typically checks a vehicle's PUC certificate compliance, according to legal commentary cited in this series?

A. Only the fire department

B. Primarily RTO officials, though enforcement can overlap with traffic police

C. Only municipal corporations

D. Only insurance companies

Correct Answer: Option (B)

Short Explanation:

Verifying PUC compliance during a routine stop falls primarily within an RTO official's domain, though in practice enforcement responsibilities can overlap with traffic police.

Question 379

A traffic officer in plain clothes, without any visible identification, stops a driver and asks for their documents. Based on rights during a traffic stop covered in this series, what is a reasonable response?

A. The driver must always comply immediately regardless of identification

B. The driver may politely ask to see identification first, and may reasonably decline to hand over documents if it cannot be shown

C. The driver should immediately drive away without any interaction

D. The driver must call 112 before responding to any officer

Correct Answer: Option (B)

Short Explanation:

A driver may reasonably ask an unidentified officer to show identification, and may decline to hand over documents if the officer cannot provide it, as a reasonable exercise of their rights during a stop.

Question 380

What is required for a challan to be issued during a traffic stop?

A. A verbal statement is sufficient with no documentation

B. A proper challan book or e-challan device; if confiscated, a receipt should be provided for any document taken

C. No formal process is required by law

D. Only a magistrate can issue any challan

Correct Answer: Option (B)

Short Explanation:

A challan should be issued using a proper challan book or e-challan device, and if any document is confiscated, the driver is entitled to a receipt.

Question 381

What is the primary purpose of the Motor Vehicles Act, 1988?

A. To regulate only commercial vehicle permits

B. To govern licensing, registration, insurance, traffic conduct, and penalties for road transport

C. To regulate only railway transport

D. To set fuel prices nationally

Correct Answer: Option (B)

Short Explanation:

The Motor Vehicles Act, 1988 is India's primary law governing road transport, covering licensing, registration, insurance, traffic conduct, and penalties.

Question 382

What replaced the older Motor Vehicles Act of 1939?

A. The Indian Penal Code

B. The Motor Vehicles Act, 1988

C. The Right to Information Act

D. The Consumer Protection Act

Correct Answer: Option (B)

Short Explanation:

The Motor Vehicles Act, 1988 replaced the earlier Motor Vehicles Act of 1939, modernising India's road transport law.

Question 383

What is the general rule regarding an officer's rank and the amount they can collect as a fine on the spot?

A. Any officer, regardless of rank, can collect any amount on the spot

B. Officers below a certain rank are often limited in the amount they can personally collect, with larger fines requiring more senior or formal processing

C. Only inspectors can issue any traffic fine

D. Rank has no bearing on fine collection authority

Correct Answer: Option (B)

Short Explanation:

As a general principle, officers below a certain rank are often limited in the amount they can personally collect on the spot, with larger fines requiring a more senior officer or formal processing.

Question 384

What can happen if a driver's documents are confiscated without a receipt being issued?

A. This is standard, expected procedure with no issue

B. This is a departure from expected procedure, and the driver is entitled to request a receipt

C. The driver automatically loses their licence permanently

D. No documents can legally be confiscated under any circumstance

Correct Answer: Option (B)

Short Explanation:

A driver is entitled to a receipt when a document is confiscated; failing to issue one is a departure from expected procedure that the driver can reasonably question.

Question 385

A driver wants to contest an e-challan they believe was wrongly issued due to a misread number plate by an ANPR camera. What is the most effective first step, based on this series?

A. Ignore the challan and hope it is automatically cancelled

B. Gather supporting evidence such as photos or GPS data, and contest it through the Parivahan Sewa portal or the issuing authority

C. Pay the fine immediately without contesting, since ANPR cameras are never wrong

D. Wait for the challan to reach a magistrate court before taking any action

Correct Answer: Option (B)

Short Explanation:

The most effective first step is to gather supporting evidence — such as photos, dashcam footage, or GPS data — and contest the challan through the Parivahan Sewa portal or the issuing authority, rather than ignoring it or waiting.

Question 386

What is the role of the National Legal Services Authority (NALSA) in relation to traffic challans?

A. NALSA issues driving licences

B. NALSA coordinates the Lok Adalat scheme, offering reduced settlements for pending challans

C. NALSA sets national speed limits

D. NALSA manufactures HSRP plates

Correct Answer: Option (B)

Short Explanation:

NALSA coordinates the Lok Adalat scheme, which offers reduced, final settlements for pending traffic challans across states.

Question 387

What is the general legal standing of PUC certificate enforcement compared to insurance enforcement during a routine stop?

A. Both are enforced identically by the same authority in all cases

B. PUC checks are primarily an RTO function, while insurance and licence checks are more directly within general traffic police authority

C. PUC enforcement is stricter than insurance enforcement in all states

D. Neither is enforced during routine stops

Correct Answer: Option (B)

Short Explanation:

PUC certificate checks are primarily considered an RTO function, while documents like insurance and licence are more directly and commonly checked by general traffic police during routine stops.

Question 388

What is the general expectation regarding cooperation during a breathalyser test conducted by police?

A. A driver should always refuse to avoid self-incrimination

B. A driver is generally expected to cooperate with a lawfully conducted test performed in their presence

C. Breathalyser tests are illegal in India

D. Only written consent forms can authorise such a test

Correct Answer: Option (B)

Short Explanation:

A driver is generally expected to cooperate with a breathalyser test lawfully conducted in their presence; refusing without valid reason is unlikely to help and may complicate the situation further.

Question 389

A vehicle owner's registration is at risk of cancellation after their child, a minor, was caught driving the family car and committing a traffic offence. The owner argues they were unaware the child had taken the vehicle. Based on Section 199A's framing, how is this defence likely to be treated?

A. It will automatically absolve the owner of all responsibility

B. Section 199A is generally framed around vehicle owner/guardian responsibility regardless of awareness, so this defence is unlikely to fully absolve the owner

C. It has no bearing on the case either way

D. The child will be held solely and fully responsible instead

Correct Answer: Option (B)

Short Explanation:

Section 199A is deliberately framed to place responsibility on the vehicle owner or guardian who enabled a minor's access to the vehicle, making a claim of unawareness unlikely to fully absolve them of the fine and registration risk.

Question 390

What is the correct definition of 'ANPR' in the context of traffic enforcement?

A. A type of vehicle insurance

B. Automatic Number Plate Recognition, a camera-based system for vehicle identification

C. A national driving licence registry

D. A pollution testing device

Correct Answer: Option (B)

Short Explanation:

ANPR stands for Automatic Number Plate Recognition, a camera-based system used for vehicle identification and enforcement, including e-challan generation.

Question 391

What must a vehicle owner do if they sell their vehicle, regarding insurance?

A. No action is required regarding insurance

B. Transfer the insurance to the new owner within 14 days of sale, under Section 157

C. Cancel the insurance permanently

D. Insurance transfer is optional and can be done anytime

Correct Answer: Option (B)

Short Explanation:

Section 157 requires that a vehicle's insurance be transferred to the new owner within 14 days of its sale.

Question 392

What is the minimum coverage requirement for vehicle insurance set under which section of the Motor Vehicles Act?

A. Section 140

B. Section 146

C. Section 147

D. Section 161

Correct Answer: Option (C)

Short Explanation:

Section 147 sets the minimum insurance coverage requirements, working alongside Section 146, which makes third-party insurance compulsory.

Question 393

What is the penalty range for no valid fitness certificate on a commercial vehicle?

A. ₹100 – ₹200

B. ₹500 – ₹1,000

C. Up to ₹10,000

D. No penalty applies to commercial vehicles

Correct Answer: Option (C)

Short Explanation:

Driving without a valid fitness certificate can bring a fine of up to ₹10,000 for commercial vehicles, higher than the ₹2,000–₹5,000 range for private vehicles.

Question 394

What is the primary function of Section 149 of the Motor Vehicles Act?

A. Setting speed limits

B. Obliging insurers to compensate third-party victims

C. Regulating driving licence categories

D. Setting vehicle emission standards

Correct Answer: Option (B)

Short Explanation:

Section 149 obliges insurers to compensate third-party victims of accidents, reinforcing the purpose of compulsory third-party insurance under Section 146.

Question 395

A driver's vehicle insurance lapsed two weeks ago without their notice, and they are stopped for a routine check. Based on the legal framework in this series, what is the most accurate outcome to expect?

A. No consequence, since the lapse was unintentional

B. The driver can be penalised under Section 196 for driving an uninsured vehicle, since intent is not a defence to the compliance requirement

C. Only a warning is possible, since insurance lapses are never penalised

D. The vehicle will be permanently deregistered immediately

Correct Answer: Option (B)

Short Explanation:

Since third-party insurance is a strict compliance requirement under Section 146, an unintentional lapse still exposes the driver to penalties under Section 196 for driving an uninsured vehicle, regardless of awareness.

Question 396

What is the primary legal basis for mandatory FASTag use on Indian national highways?

A. The Information Technology Act, 2000

B. The National Highway Fee (Determination of Rates and Collection) Rules, 2008

C. The Motor Vehicles Act, 1939

D. The Indian Penal Code

Correct Answer: Option (B)

Short Explanation:

The National Highway Fee (Determination of Rates and Collection) Rules, 2008 provides the legal basis for mandatory FASTag use and the double-toll penalty for non-compliance.

Question 397

What consequence can a designated authority or contractor face for non-compliant road lighting infrastructure, following the Supreme Court's 2025 directive?

A. No consequence applies to authorities or contractors

B. A separate penalty of up to ₹1 lakh, distinct from fines on individual drivers

C. Automatic imprisonment for all involved officials

D. Only a public apology is required

Correct Answer: Option (B)

Short Explanation:

Following the Supreme Court's 2025 directive on headlight and lighting standards, designated authorities or contractors responsible for non-compliant infrastructure can face penalties of up to ₹1 lakh, separate from individual driver fines.

Question 398

What is the correct sequence when an e-challan remains unresolved for an extended period?

A. It is immediately dismissed after 30 days

B. It typically moves from issuance to a Virtual Court, and then potentially to a magistrate court summons under Section 208

C. It is transferred directly to a Lok Adalat with no other steps

D. It has no further consequence after the initial notice

Correct Answer: Option (B)

Short Explanation:

An unresolved e-challan typically moves through a Virtual Court after 60–90 days, and can proceed to a magistrate court summons under Section 208 if it remains unresolved further.

Question 399

A citizen wants to verify whether a specific traffic fine amount they were charged is accurate and current for their state. Based on this series, what is the most reliable way to confirm this?

A. Rely on informal advice from other drivers

B. Check with the state transport department or the official Parivahan portal, since exact fine amounts can vary by state and are periodically revised

C. Assume all fines are identical nationwide with no variation

D. Only a lawyer can provide this information

Correct Answer: Option (B)

Short Explanation:

Since exact fine amounts can vary by state and are periodically revised, the most reliable way to verify a specific fine is through the state transport department or the official Parivahan portal.

Question 400

What is the general purpose of the Supreme Court e-Committee's Virtual Courts initiative?

A. To eliminate traffic fines entirely

B. To process minor traffic violations digitally, reducing the need for physical court appearances

C. To replace all traffic police with automated systems

D. To handle only vehicle registration disputes

Correct Answer: Option (B)

Short Explanation:

The Supreme Court e-Committee's Virtual Courts initiative processes minor traffic violations digitally, significantly reducing the need for physical court appearances for such cases.

Question 401

Since when has FASTag been mandatory for cars and larger vehicles on Indian national highways?

A. 15 February 2018

B. 15 February 2021

C. 1 January 2022

D. 1 April 2023

Correct Answer: Option (B)

Short Explanation:

FASTag has been mandatory for Class M and N vehicles on national highways since 15 February 2021.

Question 402

What happens if a vehicle does not have a working FASTag at a toll plaza?

A. The vehicle is turned away

B. The vehicle is charged double the standard toll

C. No toll is charged at all

D. The vehicle receives a warning only, with no charge

Correct Answer: Option (B)

Short Explanation:

A vehicle without a working FASTag is charged double the standard toll rate in a FASTag lane.

Question 403

What does the 'One Vehicle, One FASTag' rule prevent?

A. Vehicles from having any FASTag at all

B. A single FASTag from being reused or linked across multiple vehicles

C. FASTags from being recharged more than once

D. Two-wheelers from using FASTag

Correct Answer: Option (B)

Short Explanation:

The 'One Vehicle, One FASTag' rule prevents a single FASTag from being reused or linked across multiple vehicles, reducing misuse.

Question 404

What is 'GNSS-based tolling' being piloted for in India?

A. A new speed camera technology

B. Satellite-based tolling that could remove the need for physical toll booths

C. A new type of driving licence verification

D. A GPS-based vehicle theft tracker

Correct Answer: Option (B)

Short Explanation:

GNSS (satellite)-based tolling is being piloted in India as a way to eventually enable barrier-free, distance-based toll collection without physical booths.

Question 405

A driver's FASTag balance runs out exactly at a toll plaza, and there is heavy traffic queued behind. Based on NHAI's stated guidelines, what should the driver expect regarding wait time and toll charges?

A. An indefinite wait with no toll waiver possible

B. A toll waiver if the wait exceeds 10 seconds, per NHAI guidelines, though the vehicle would still likely be charged the double-toll rate for the insufficient FASTag balance

C. No toll charge at all under any circumstance

D. A permanent ban from using that toll plaza in the future

Correct Answer: Option (B)

Short Explanation:

NHAI guidelines state that if a vehicle waits longer than 10 seconds at a toll booth, the toll is waived — but this addresses queue delays, not the separate double-toll charge that applies for an insufficient or non-functional FASTag.

Question 406

Are dashcams legal to use in private vehicles in India?

A. No, they are banned nationwide

B. Yes, there is no specific law prohibiting their use

C. Only with special police permission

D. Only in commercial vehicles

Correct Answer: Option (B)

Short Explanation:

There is no specific Indian law prohibiting the use of dashcams in private or commercial vehicles.

Question 407

Under which law is dashcam footage admissible as electronic evidence in Indian courts?

A. The Indian Evidence Act, 1872, unchanged

B. Section 63 of the Bharatiya Sakshya Adhiniyam, 2023

C. The Information Technology Act, 2000, exclusively

D. The Motor Vehicles Act, 1988

Correct Answer: Option (B)

Short Explanation:

Section 63 of the Bharatiya Sakshya Adhiniyam, 2023, which replaced the Indian Evidence Act, governs the admissibility of dashcam and other electronic evidence.

Question 408

What condition must generally be met for dashcam footage to be treated as valid evidence in court?

A. No conditions apply; any footage is automatically valid

B. The device must have been functioning properly during regular use, accompanied by a certificate confirming this

C. The footage must be printed on paper before submission

D. Only footage recorded by police vehicles is valid

Correct Answer: Option (B)

Short Explanation:

For dashcam footage to be admissible, the device must have been functioning properly during regular, ordinary use, and the footage must be accompanied by a certificate confirming these conditions.

Question 409

A driver wants to use dashcam footage to dispute a wrongly issued challan but only has a fragment of video with no accompanying certificate. What is the likely outcome regarding its admissibility?

A. It will be automatically accepted as valid evidence regardless of certification

B. It may face admissibility challenges without the required certificate under Section 63 of the Bharatiya Sakshya Adhiniyam, 2023

C. Fragmented footage is always inadmissible regardless of certification

D. Certification is never required for any digital evidence

Correct Answer: Option (B)

Short Explanation:

Without the certificate required under Section 63 confirming proper device functioning and regular use, the footage may face genuine admissibility challenges in court, even if the content itself appears relevant.

Question 410

What standard governs battery safety for electric two- and three-wheelers in India?

A. AIS-038

B. AIS-145

C. AIS-156

D. IS 4151

Correct Answer: Option (C)

Short Explanation:

AIS-156 governs battery safety for L-category vehicles, which include electric two- and three-wheelers and quadricycles.

Question 411

What standard governs battery safety for electric cars and larger vehicles (M and N category)?

A. AIS-072

B. AIS-138

C. AIS-038 (Revision 2)

D. IS 17017

Correct Answer: Option (C)

Short Explanation:

AIS-038 (Revision 2) covers battery safety for M and N category vehicles, including electric cars and larger vehicles.

Question 412

What event directly triggered India's tightened EV battery safety standards in 2022?

A. A rise in fuel prices

B. A series of electric two-wheeler fire incidents

C. A new international trade agreement

D. A sudden increase in EV exports

Correct Answer: Option (B)

Short Explanation:

A series of electric two-wheeler fire incidents in 2022 directly triggered the tightening of India's EV battery safety standards under AIS-156 and AIS-038.

Question 413

What does an 'IP67' rating indicate about an EV battery pack?

A. It is fireproof under all conditions

B. It is protected against dust ingress and can withstand temporary submersion in water

C. It has a 67% charge efficiency rating

D. It can operate only in humid climates

Correct Answer: Option (B)

Short Explanation:

An IP67 rating indicates the battery pack is protected against dust ingress and can withstand temporary submersion in water, part of the mandatory EV battery safety standards.

Question 414

What is a 'Battery Management System (BMS)' in an electric vehicle?

A. A mobile app for tracking vehicle location

B. The electronics that monitor and protect an EV battery pack

C. A type of charging cable

D. A government subsidy scheme for EV buyers

Correct Answer: Option (B)

Short Explanation:

A Battery Management System is the electronics that monitor and protect an EV battery pack, helping prevent unsafe conditions like overheating.

Question 415

An EV owner notices their battery feels unusually warm immediately after using a third-party, non-manufacturer-approved charger. Based on EV safety guidance in this series, what is the most appropriate response?

A. Continue using the same charger, since warmth is always normal after charging

B. Stop using that charger immediately, switch to the manufacturer-approved charger, and have the battery inspected if the warmth persists or seems excessive

C. Charge the vehicle for a longer period to 'balance out' the warmth

D. Ignore it, since third-party chargers are always equally safe

Correct Answer: Option (B)

Short Explanation:

Using a non-approved charger is a known risk factor for battery issues; unusual heat should prompt switching to the manufacturer-approved charger and having the battery inspected if the issue persists or seems severe.

Question 416

What is the safest practice for charging an electric vehicle?

A. Use any available charger, regardless of manufacturer approval

B. Use only the manufacturer-approved charger and cable

C. Charge the vehicle even when the battery is very hot from recent use

D. Leave the vehicle charging indefinitely, even after it is full

Correct Answer: Option (B)

Short Explanation:

The safest EV charging practice is to use only the manufacturer-approved charger and cable, avoiding generic or modified alternatives.

Question 417

What is an 'Adaptive Traffic Control System (ATCS)'?

A. A fixed-schedule traffic signal system

B. A system that adjusts signal timing in real time based on actual traffic conditions

C. A speed limit enforcement camera only

D. A toll collection technology

Correct Answer: Option (B)

Short Explanation:

An Adaptive Traffic Control System adjusts traffic signal timing in real time based on actual traffic conditions, rather than following a fixed schedule.

Question 418

Which Indian city is cited in this series for operating an AI-powered adaptive traffic signal system across more than 160 intersections?

A. Mumbai

B. Bengaluru

C. Chennai

D. Kolkata

Correct Answer: Option (B)

Short Explanation:

Bengaluru's AI-powered adaptive traffic control system, developed with C-DAC, covers more than 160 intersections.

Question 419

A city wants to reduce congestion at its busiest intersections using technology. Based on the description of Bengaluru's system in this series, which core capability should the new system prioritise?

A. A fixed signal timer that never changes regardless of traffic

B. The ability to dynamically adjust signal timing based on real-time traffic density, similar to an Adaptive Traffic Control System

C. Removing all traffic signals in favour of manual control only

D. Increasing the number of physical traffic police at each intersection instead

Correct Answer: Option (B)

Short Explanation:

Bengaluru's system demonstrates that dynamically adjusting signal timing based on real-time traffic density (an Adaptive Traffic Control System) is the core capability that helps reduce congestion at busy intersections.

Question 420

What is the recommended practice for interacting with a GPS navigation app while driving?

A. Type destinations manually while driving for accuracy

B. Set the route before driving and rely on voice guidance rather than looking at the screen while moving

C. Frequently glance at the screen for reassurance while driving

D. Mount the phone loosely on the dashboard for easy access

Correct Answer: Option (B)

Short Explanation:

The safe practice is to set the route before starting to drive and rely on voice guidance, avoiding screen interaction while the vehicle is moving.

Question 421

What should a driver do if a GPS app's instruction conflicts with a visible road sign, such as a 'No U-Turn' sign?

A. Always follow the GPS app, since it is more current

B. Follow the visible road sign, since apps do not always reflect the latest road rules or closures

C. Ignore both and choose an alternate route immediately

D. Stop the vehicle and wait for the app to update

Correct Answer: Option (B)

Short Explanation:

A visible road sign should be followed over a GPS app's instruction when the two conflict, since navigation apps do not always reflect real-time closures or rule changes.

Question 422

What are DigiLocker and mParivahan documents legally equivalent to?

A. Draft copies with no legal standing

B. Physical original documents, under the Information Technology Act, 2000

C. Temporary permits valid for 7 days

D. Documents valid only for two-wheelers

Correct Answer: Option (B)

Short Explanation:

DigiLocker and mParivahan documents are legally equivalent to physical originals under the Information Technology Act, 2000, and must be accepted by traffic authorities.

Question 423

What safety feature is increasingly mandated in app-based cabs and autos by state transport departments?

A. A built-in entertainment system

B. A GPS-linked panic button connecting to a control room

C. A minimum vehicle age requirement of 20 years

D. A dedicated luggage compartment

Correct Answer: Option (B)

Short Explanation:

Many state transport departments mandate a GPS-linked panic button in app-based cabs and autos, sending an SOS signal with location data to a control room.

Question 424

A ride-sharing passenger boards a cab at night, and the driver's photo in the app does not match the person driving. What is the most appropriate immediate action?

A. Continue the ride, assuming it is a minor app error

B. End the ride as soon as safely possible and report the discrepancy through the app or a safety helpline

C. Confront the driver aggressively during the ride

D. Ignore the mismatch since panic buttons only work for accidents, not this situation

Correct Answer: Option (B)

Short Explanation:

A driver mismatch is a genuine safety concern; the appropriate response is to end the ride as soon as safely possible and report the discrepancy through the app or an available safety mechanism, rather than continuing or escalating during the ride.

Question 425

What does 'ITMS' stand for in the context of smart traffic systems?

A. Indian Traffic Management Society

B. Intelligent Traffic Management System

C. Integrated Toll Management Scheme

D. International Transport Monitoring Standard

Correct Answer: Option (B)

Short Explanation:

ITMS stands for Intelligent Traffic Management System, combining cameras, sensors, and software to monitor and manage traffic.

Question 426

What role does AI primarily play in India's current traffic management systems, based on this series?

A. AI fully replaces all human traffic police decisions

B. AI supports detection, monitoring, and enforcement, while final decisions remain with human authorities

C. AI has no current role in Indian traffic management

D. AI is used only for vehicle manufacturing, not traffic management

Correct Answer: Option (B)

Short Explanation:

AI currently supports detection, monitoring, and enforcement in Indian traffic management — such as ANPR and adaptive signals — but final enforcement decisions remain with human traffic authorities.

Question 427

What is the 'New Delhi Road Safety Declaration' (2026) primarily about?

A. A ban on all two-wheelers in Delhi

B. A national commitment to zero preventable road fatalities, aligned with the UN Decade of Action

C. A new toll collection system for Delhi

D. A vehicle scrappage mandate for Delhi only

Correct Answer: Option (B)

Short Explanation:

The New Delhi Road Safety Declaration set a national goal of zero preventable road fatalities, aligned with the UN Decade of Action for Road Safety 2021–2030.

Question 428

A policymaker wants to justify continued investment in both AI-based traffic enforcement and traditional human traffic police, rather than choosing one over the other. Based on this series, what is the strongest justification?

A. AI systems are prone to frequent failure and cannot be trusted at all

B. AI tools support detection and monitoring effectively, but final enforcement decisions and judgment calls still require human oversight

C. Human traffic police are becoming entirely obsolete and should be phased out

D. Neither AI nor human police meaningfully contribute to road safety

Correct Answer: Option (B)

Short Explanation:

Since AI systems are described as supporting detection and monitoring rather than replacing human judgment, continued investment in both reflects the complementary roles each plays in effective traffic enforcement.

Question 429

What does 'RFID' technology enable in the context of FASTag?

A. Manual toll payment only

B. Automatic toll deduction without the vehicle needing to stop

C. Vehicle theft prevention exclusively

D. Speed limit enforcement

Correct Answer: Option (B)

Short Explanation:

RFID (Radio Frequency Identification) technology enables FASTag's automatic toll deduction, allowing vehicles to pass through toll plazas without stopping.

Question 430

What is a 'Green Corridor' in traffic management terminology?

A. A road reserved exclusively for electric vehicles

B. A route where signals are coordinated to give continuous priority, often for emergency vehicles

C. A designated cycling-only route

D. A road closed permanently for environmental reasons

Correct Answer: Option (B)

Short Explanation:

A green corridor is a route where traffic signals are coordinated to give continuous priority, commonly used to speed up emergency vehicle response times.

Question 431

What is the primary purpose of a 'Battery Management System (BMS)' in an EV?

A. To play music through the vehicle's speakers

B. To monitor and protect the battery pack from unsafe conditions

C. To track the vehicle's GPS location

D. To calculate toll charges

Correct Answer: Option (B)

Short Explanation:

A Battery Management System monitors and protects an EV's battery pack, helping detect and prevent unsafe conditions such as overheating.

Question 432

What is the recommended charging practice regarding an EV battery's temperature after a long, hot ride?

A. Charge immediately regardless of battery temperature

B. Let the battery cool before charging

C. Charging temperature has no safety relevance

D. Charge only using fast-charging mode after a hot ride

Correct Answer: Option (B)

Short Explanation:

It is recommended to let an EV battery cool after a long, hot ride before charging, reducing thermal stress on the battery.

Question 433

What is the primary function of 'ICCC' in smart city traffic management?

A. Issuing driving licences

B. Serving as a city's central traffic monitoring and command hub

C. Manufacturing traffic signals

D. Collecting vehicle registration fees

Correct Answer: Option (B)

Short Explanation:

An Integrated Command and Control Centre (ICCC) serves as a city's central hub for monitoring and managing traffic through connected sensors and cameras.

Question 434

What is a key advantage of GNSS-based (satellite) tolling over traditional toll booths?

A. It requires more physical infrastructure than toll booths

B. It could eventually enable barrier-free, distance-based toll collection without physical booths

C. It only works for two-wheelers

D. It eliminates the need for any vehicle identification

Correct Answer: Option (B)

Short Explanation:

GNSS-based tolling could eventually enable barrier-free, distance-based toll collection using satellite positioning instead of physical toll booths.

Question 435

A logistics company wants to reduce toll-related delays for its fleet across multiple states. Considering the trajectory of Indian tolling technology described in this series, which upcoming development is most directly relevant to this goal?

A. A return to manual, cash-only toll booths

B. The phased rollout of GNSS-based satellite tolling, which could reduce or eliminate stops at physical toll booths

C. A ban on commercial vehicles using national highways

D. Mandatory manual toll payment for all commercial fleets

Correct Answer: Option (B)

Short Explanation:

The phased rollout of GNSS-based satellite tolling is directly relevant, since it aims to reduce or eliminate the need to stop at physical toll booths, which would directly address fleet toll-related delays.

Question 436

What is the safest response if a GPS navigation app suggests a route that appears to lead into a closed or restricted road?

A. Follow the app regardless of visible signage

B. Trust visible road signs and closures over the app's suggested route

C. Reverse immediately without checking surroundings

D. Continue driving and assume the closure is temporary and irrelevant

Correct Answer: Option (B)

Short Explanation:

Visible road signs and closures should be trusted over a GPS app's suggested route, since apps can lag behind real-time changes to road conditions.

Question 437

What legal framework applies to distracted driving caused by improper phone or GPS use, beyond specific technology rules?

A. No law addresses distracted driving in India

B. Section 184 of the Motor Vehicles Act, covering dangerous or distracted driving generally

C. Only state-specific municipal bylaws apply

D. The Information Technology Act, 2000, exclusively

Correct Answer: Option (B)

Short Explanation:

Section 184 of the Motor Vehicles Act covers dangerous driving generally, which includes distraction caused by improper phone or GPS use while driving.

Question 438

What is the main safety concern with mounting a GPS device loosely on a dashboard rather than securely?

A. It may affect the vehicle's fuel efficiency

B. It can shift or fall while driving, creating a distraction or obstruction

C. It has no safety relevance at all

D. It only affects the device's battery life

Correct Answer: Option (B)

Short Explanation:

A loosely mounted GPS device can shift or fall while driving, creating a distraction or physical obstruction, which is why secure mounting at eye level is recommended.

Question 439

A city government is evaluating whether to invest in AI-based ANPR cameras for red-light violation detection. Which outcome, based on how such systems function in this series, is the most realistic expected benefit?

A. Complete elimination of all traffic violations citywide

B. More consistent detection and automatic e-challan generation for red-light violations, supporting but not replacing human enforcement

C. Full replacement of the need for any traffic police in the city

D. No measurable benefit, since AI cameras cannot detect violations accurately

Correct Answer: Option (B)

Short Explanation:

AI-based ANPR and violation-detection cameras realistically provide more consistent detection and automatic e-challan generation, supporting human enforcement rather than completely replacing or eliminating violations citywide.

Question 440

What is the recommended approach to using smart mobility apps for safety information?

A. Any app is equally reliable regardless of source

B. Choose apps that pull from official or well-established data sources, and keep them updated

C. Only use apps that require no internet connection

D. Avoid all mobility apps for safety reasons

Correct Answer: Option (B)

Short Explanation:

It is recommended to choose smart mobility apps that pull from official or well-established data sources and to keep them updated, ensuring the safety information relied upon is current.

Question 441

What was the timeline for driver-side and front-passenger airbags becoming mandatory in India?

A. Both became mandatory simultaneously in 2015

B. Driver airbag from July 2019; front-passenger airbag from January 2022

C. Both became mandatory in 2025

D. Neither is currently mandatory

Correct Answer: Option (B)

Short Explanation:

A driver-side airbag became mandatory from July 2019, followed by a front-passenger airbag mandate from January 2022, part of a phased approach under AIS-145.

Question 442

What is the primary purpose of AIS-145 as a standard?

A. Vehicle emission control

B. Occupant safety features like airbags and seatbelt reminders

C. Tyre manufacturing quality

D. Vehicle registration procedures

Correct Answer: Option (B)

Short Explanation:

AIS-145 is the Automotive Industry Standard covering airbags, seatbelt reminders, and related occupant safety features in Indian vehicles.

Question 443

What is the core idea behind the statement that 'technology multiplies habits, it doesn't replace them'?

A. Technology always improves safety regardless of user behaviour

B. The outcome of using technology depends heavily on the existing habits and judgment of the user

C. Technology has no real effect on road safety outcomes

D. Only new drivers are affected by this principle

Correct Answer: Option (B)

Short Explanation:

This principle means that smart technology amplifies a road user's existing habits — a disciplined driver benefits from GPS navigation, while a distracted driver simply finds a new way to be distracted.

Question 444

What is the primary safety rationale for choosing a manufacturer-approved EV charger over a generic one?

A. Manufacturer chargers are always cheaper

B. Manufacturer-approved chargers are designed to work safely with the vehicle's specific battery and BMS, reducing fire and malfunction risk

C. Generic chargers charge faster in all cases

D. There is no safety difference between the two types

Correct Answer: Option (B)

Short Explanation:

Manufacturer-approved chargers are specifically designed to work safely with a vehicle's battery and Battery Management System, reducing the risk of fire or malfunction compared to generic alternatives.

Question 445

A road safety analyst is asked to summarise the common thread linking FASTag, dashcams, EV battery standards, and AI traffic systems as covered in this series. What is the most accurate summary?

A. They are unrelated technologies with no common safety theme

B. They each represent modern technology that can improve safety and convenience, but only when combined with correct user practices and appropriate regulation

C. They all exist purely for revenue generation with no safety purpose

D. They are all mandatory only for commercial vehicles

Correct Answer: Option (B)

Short Explanation:

FASTag, dashcams, EV battery standards, and AI traffic systems each illustrate how modern technology can improve safety and convenience, but only when paired with correct user practices, proper maintenance, and appropriate regulatory standards.

Question 446

What is the safe response if an EV shows signs of unusual swelling in its battery pack?

A. Continue using it normally, since minor swelling is expected

B. Stop using or charging it immediately and have it inspected before further use

C. Charge it fully to 'reset' the battery

D. Only monitor it, with no immediate action needed

Correct Answer: Option (B)

Short Explanation:

Unusual swelling in an EV battery pack is a warning sign that should prompt immediately stopping use and charging, followed by professional inspection before further use.

Question 447

What was one key finding that prompted stricter EV battery safety standards regarding thermal events?

A. EV batteries never posed any fire risk previously

B. A need for audio-visual warnings and thermal propagation testing to contain a single cell's failure

C. EV batteries required no testing at all before 2022

D. Only imported EVs required safety testing

Correct Answer: Option (B)

Short Explanation:

Strengthened standards introduced requirements such as audio-visual warnings for early thermal event detection and thermal propagation testing, designed to contain a single cell's failure and prevent it from spreading.

Question 448

What is the main advantage of AI-assisted analytics in a city's Integrated Command and Control Centre?

A. They eliminate the need for any traffic data collection

B. They help spot incidents faster and support rerouting decisions using real-time data

C. They are used only for billing purposes

D. They replace the need for CCTV cameras entirely

Correct Answer: Option (B)

Short Explanation:

AI-assisted analytics in an ICCC help spot incidents faster and support traffic rerouting decisions using real-time data from connected cameras and sensors.

Question 449

A driver relies entirely on a navigation app's estimated arrival time to justify speeding, arguing the app 'expects' a certain average speed. Based on the principle that technology multiplies existing habits, what is the flaw in this reasoning?

A. The reasoning is entirely valid, since apps account for speeding as a default expectation

B. The app's estimate is based on typical legal travel conditions, not an endorsement of speeding; the driver is using the technology to justify an already risky habit rather than the technology causing the risk

C. Navigation apps are always inaccurate and should never be trusted for timing

D. Speeding is safe as long as a navigation app suggests a similar pace

Correct Answer: Option (B)

Short Explanation:

This scenario illustrates that a navigation app's estimate reflects typical legal travel conditions, not an endorsement of speeding — the driver is using the technology to rationalise an existing risky habit, demonstrating that technology multiplies rather than causes such behaviour.

Question 450

What is the recommended action regarding smart mobility and navigation apps to ensure safety information stays accurate?

A. Never update apps, to avoid losing saved data

B. Keep apps updated regularly for the latest map and safety data

C. Updates are unnecessary once an app is installed

D. Only update apps once a year, regardless of prompts

Correct Answer: Option (B)

Short Explanation:

Keeping smart mobility and navigation apps updated regularly ensures access to the latest map and safety data, which can change frequently.

Question 451

What is a 'Responsible Road Citizen', as defined in this series?

A. Someone who never makes any mistake while driving

B. A road user who consistently combines legal compliance, safety habits, and courtesy toward others

C. Only a professional driver with a commercial licence

D. Someone who only follows rules when observed by police

Correct Answer: Option (B)

Short Explanation:

A Responsible Road Citizen consistently combines legal compliance, personal safety habits, courtesy toward others, and awareness of their wider impact, on every trip.

Question 452

Why are checklists considered useful even for experienced drivers?

A. Because experienced drivers need more supervision than beginners

B. Because memory and confidence are unreliable under routine, repeated pressure

C. Because checklists are legally required for all drivers

D. Because they replace the need for a driving licence

Correct Answer: Option (B)

Short Explanation:

Checklists compensate for memory lapses under routine, repeated pressure, which is why professionals like pilots and surgeons rely on them despite extensive experience.

Question 453

What should be included in a basic daily pre-drive checklist?

A. Only checking the fuel gauge

B. Valid documents, correctly worn safety gear, adjusted mirrors, sufficient fuel or charge, and a checked route

C. Only checking tyre pressure

D. Only checking the vehicle's exterior paint condition

Correct Answer: Option (B)

Short Explanation:

A daily pre-drive checklist should include valid documents, correctly worn safety gear, adjusted mirrors, sufficient fuel or charge, and a checked route.

Question 454

How often is it recommended to perform a deeper vehicle inspection, beyond the quick daily check?

A. Once every few years

B. At least monthly

C. Only when a problem is already visible

D. Only before an annual fitness test

Correct Answer: Option (B)

Short Explanation:

A slightly deeper vehicle check — covering tyres, fluids, and brakes — is recommended at least monthly, in addition to a quick check before each drive.

Question 455

A driver believes that since they already completed all ten modules of this road safety series, they no longer need to consciously follow checklists. What is the flaw in this reasoning, based on the purpose of this capstone module?

A. There is no flaw; completing the series is sufficient on its own

B. Knowing something and consistently applying it under real-world pressure are different things, which is exactly the gap checklists are designed to close

C. Checklists are only useful for people who have not studied road safety

D. This module exists only to repeat previously covered information with no new value

Correct Answer: Option (B)

Short Explanation:

This capstone module exists precisely because knowledge alone does not guarantee consistent application — checklists bridge the gap between knowing the rules and actually following them under everyday pressure.

Question 456

What is 'Eco-Driving'?

A. Driving only electric vehicles

B. Driving techniques that reduce fuel consumption and emissions

C. A government subsidy for fuel-efficient cars

D. A type of vehicle insurance discount

Correct Answer: Option (B)

Short Explanation:

Eco-driving refers to driving techniques — such as smooth acceleration and avoiding unnecessary idling — that reduce fuel consumption and emissions.

Question 457

Since when have all new vehicles in India been required to meet Bharat Stage VI (BS-VI) emission norms?

A. April 2015

B. April 2020

C. April 2023

D. April 2025

Correct Answer: Option (B)

Short Explanation:

Since April 2020, all new vehicles in India must meet Bharat Stage VI (BS-VI) emission norms, equivalent to the international Euro 6 standard.

Question 458

By approximately how much can idling engines at traffic signals raise localised pollution levels, according to a 2019 CRRI study?

A. Less than 1%

B. Around 9% or more

C. Around 50%

D. Around 90%

Correct Answer: Option (B)

Short Explanation:

A 2019 Central Road Research Institute (CRRI) study found that idling engines at traffic signals can raise localised pollution levels by more than 9%.

Question 459

Delhi's 'Red Light On, Gaadi Off' campaign reportedly raised engine-off compliance from around 20% to around 80% at monitored intersections during active periods. What does this outcome best demonstrate about individual environmental habits?

A. Individual habits have no measurable effect on collective outcomes

B. Small, individually adopted habits, when encouraged at scale, can produce measurable, city-wide impact

C. Only government regulation, not voluntary habits, can ever reduce pollution

D. The campaign's results were coincidental and unrelated to driver behaviour

Correct Answer: Option (B)

Short Explanation:

This outcome demonstrates that a simple individual habit — switching off the engine — when adopted widely through encouragement rather than strict enforcement, can create measurable, city-wide environmental impact.

Question 460

What is the recommended action when stopped at a signal expected to be long?

A. Always keep the engine running regardless of wait time

B. Switch off the engine if the wait is expected to be long

C. Rev the engine to stay ready to move

D. Switching off the engine has no real benefit

Correct Answer: Option (B)

Short Explanation:

Switching off the engine at long expected halts reduces unnecessary idling emissions and is a simple, effective eco-driving habit.

Question 461

What does 'Public Responsibility' mean in the context of road safety?

A. Only the government's duty to build roads

B. Recognising that your driving choices affect other road users, not only yourself

C. A legal requirement to report every minor traffic violation witnessed

D. Responsibility that applies only to commercial drivers

Correct Answer: Option (B)

Short Explanation:

Public responsibility means recognising that your driving choices affect other road users, not only yourself, and includes actions like reporting hazards and helping accident victims.

Question 462

What is 'Road Etiquette'?

A. The strict legal minimum required by traffic law

B. Courteous behaviour that goes beyond what the law strictly requires

C. A formal test conducted before receiving a licence

D. A government-mandated driving course

Correct Answer: Option (B)

Short Explanation:

Road etiquette refers to courteous behaviour — such as unprompted headlight dipping or patience with pedestrians — that goes beyond strict legal requirements.

Question 463

What is the recommended action if you notice a pothole or broken traffic signal on your regular route?

A. Ignore it, assuming someone else will report it

B. Report it to the local municipal or traffic authority

C. Only report it if it has already caused an accident

D. Post about it on social media only, without formal reporting

Correct Answer: Option (B)

Short Explanation:

Reporting hazards like potholes or broken signals to the local municipal or traffic authority is a genuine part of public responsibility, not something to leave to others.

Question 464

Which of these is considered one of the most common and connected driving mistakes highlighted across this series?

A. Using indicators too frequently

B. Overspeeding, tailgating, unsafe overtaking, and skipping safety gear

C. Driving too slowly in the correct lane

D. Checking mirrors too often

Correct Answer: Option (B)

Short Explanation:

Overspeeding, tailgating, unsafe overtaking, driving fatigued, and skipping safety gear are highlighted as a connected pattern of common, high-impact driving mistakes.

Question 465

A driver treats road safety as something that only matters on long-distance trips, not on short, familiar routes. Based on statistics covered across this series, why is this belief risky?

A. Because most serious crashes happen on long-distance highway trips only

B. Because most serious crashes happen on short, familiar routes close to home, not distant unfamiliar journeys

C. Because short trips are legally exempt from traffic rules

D. Because vehicles are mechanically safer on long trips than short ones

Correct Answer: Option (B)

Short Explanation:

Most serious crashes happen on short, familiar routes close to home, precisely because familiarity often leads to reduced caution — making this belief particularly risky.

Question 466

What should every driver know regarding emergency preparedness, according to this capstone module?

A. Only professional drivers need emergency preparedness knowledge

B. Basic DRSABC first aid, key emergency numbers, and having a stocked roadside emergency kit

C. Emergency preparedness is unnecessary if a vehicle is new

D. Only long-distance drivers need to prepare for emergencies

Correct Answer: Option (B)

Short Explanation:

Every driver is encouraged to know basic DRSABC first aid, key emergency numbers, and to keep a stocked roadside emergency kit, regardless of trip length or vehicle age.

Question 467

What is the recommended approach to building multiple new road safety habits at once?

A. Change every habit simultaneously for fastest results

B. Build one habit at a time, letting it become automatic before adding the next

C. Habits cannot realistically be changed once established

D. Only focus on habits related to vehicle maintenance

Correct Answer: Option (B)

Short Explanation:

The recommended approach is to build one habit at a time, letting it become automatic before adding the next, rather than attempting to overhaul everything simultaneously.

Question 468

What is the relationship between vehicle maintenance and active safety, as covered in this series?

A. Vehicle maintenance has no connection to active safety

B. Regular maintenance keeps active safety systems, like brakes and tyres, working effectively when needed most

C. Only passive safety features require maintenance

D. Vehicle maintenance is relevant only for commercial vehicles

Correct Answer: Option (B)

Short Explanation:

Regular vehicle maintenance keeps active safety systems, such as brakes and tyres, working effectively, directly supporting a driver's ability to avoid a crash in the first place.

Question 469

A driver has excellent knowledge of traffic rules, road signs, and emergency response, but frequently skips their pre-drive vehicle check because they 'know' their car is fine. What gap does this scenario best illustrate?

A. No real gap exists, since knowledge alone guarantees safety

B. A gap between theoretical knowledge and the consistent, repeatable habit of applying it, which this capstone module specifically addresses

C. A gap that only affects new or inexperienced drivers

D. A gap that has no real safety consequence

Correct Answer: Option (B)

Short Explanation:

This scenario illustrates the gap between theoretical knowledge and consistent habit application — exactly the gap this capstone module's checklist approach is designed to close.

Question 470

What is the recommended response to a friend who dismisses wearing a seatbelt for a short, five-minute drive?

A. Agree with them, since short drives are genuinely low-risk

B. Encourage them to buckle up anyway, since most serious crashes happen on short, familiar routes

C. Only encourage seatbelt use on highways

D. Say nothing, since it is a personal choice with no real risk

Correct Answer: Option (B)

Short Explanation:

Encouraging seatbelt use even for short drives is appropriate, since most serious crashes happen on short, familiar routes close to home, not only long trips.

Question 471

What is one practical step recommended for staying prepared for roadside emergencies?

A. Avoid saving emergency numbers to reduce phone clutter

B. Save key emergency numbers, such as 112 and 1033, in your phone

C. Rely solely on other drivers to call for help if needed

D. Emergency preparedness is only relevant for long-distance travel

Correct Answer: Option (B)

Short Explanation:

Saving key emergency numbers such as 112 and 1033 in your phone is a simple, practical step toward staying prepared for roadside emergencies.

Question 472

What is the correct approach to vehicle maintenance, according to this module?

A. Treat it only as repair after something breaks

B. Treat it as prevention, not just repair after something breaks

C. Only perform maintenance when required for a fitness test

D. Maintenance is unnecessary for vehicles under five years old

Correct Answer: Option (B)

Short Explanation:

Vehicle maintenance should be treated as prevention — catching small issues before they become dangerous — rather than only as repair after a breakdown occurs.

Question 473

How many road deaths did India record in 2023, as cited throughout this series?

A. 1,53,972

B. 1,68,491

C. 1,72,890

D. 1,90,000

Correct Answer: Option (C)

Short Explanation:

India recorded 1,72,890 road deaths in 2023, the highest ever recorded in a single year, according to MoRTH.

Question 474

What is the main point behind describing road safety knowledge as protecting a person 'only when it becomes a consistent, repeatable habit'?

A. Knowledge alone is sufficient regardless of behaviour

B. Consistent application through habit, not just awareness, is what actually prevents accidents in daily life

C. Habits are less important than raw knowledge

D. This applies only to professional drivers

Correct Answer: Option (B)

Short Explanation:

This statement emphasises that road safety knowledge only translates into real protection when it becomes a consistent, repeatable habit, rather than remaining purely theoretical.

Question 475

A city runs both an anti-idling awareness campaign and stricter BS-VI vehicle emission enforcement simultaneously. Based on this series, how do these two approaches complement each other?

A. They are redundant and address the exact same problem

B. BS-VI addresses vehicle-level emission standards, while the awareness campaign addresses driver behaviour (like idling), together covering both technology and habit-based causes of pollution

C. Only one of the two approaches can be effective at a time

D. Neither approach has any real effect on vehicle emissions

Correct Answer: Option (B)

Short Explanation:

BS-VI standards address emissions at the vehicle technology level, while an anti-idling campaign addresses driver behaviour — together, they cover both the technological and habitual contributors to vehicle pollution.

Question 476

What is the recommended practice regarding indicators, according to road etiquette guidance?

A. Use them only when legally required and observed by police

B. Use them consistently as a courtesy, not only when legally required

C. Indicators are optional on quiet roads

D. Only use indicators when turning left, not right

Correct Answer: Option (B)

Short Explanation:

Indicators should be used consistently as a courtesy to other road users, not only in situations where their use is strictly legally required.

Question 477

What is a practical way to reinforce a new road safety habit, according to this module's guidance?

A. Habits cannot be reinforced through any specific method

B. Pair a new safety habit with an existing routine, such as checking mirrors right after fastening a seatbelt

C. Only rely on willpower with no supporting structure

D. Avoid connecting new habits to existing routines

Correct Answer: Option (B)

Short Explanation:

Pairing a new safety habit with an existing routine — such as checking mirrors immediately after fastening a seatbelt — is a practical way to help the new habit become automatic.

Question 478

What is the recommended approach to modelling road safety behaviour for younger family members?

A. Younger family members learn safety only through formal driving school

B. Model good habits consistently, since younger or newer road users often learn by observation

C. Safety habits cannot be taught by example

D. Only formal lectures are effective for teaching safety habits

Correct Answer: Option (B)

Short Explanation:

Modelling good road safety habits consistently is recommended, since younger or newer road users often learn a great deal through observation of experienced family members.

Question 479

A responsible road citizen reports a broken traffic signal, helps as a Good Samaritan when witnessing an accident, and switches off their engine at long signals. Which single theme from this capstone module do all three actions best represent?

A. These actions are unrelated and represent different, unconnected values

B. Public and environmental responsibility — recognising that individual choices affect the wider community and environment, not just oneself

C. Only legal compliance, with no broader social dimension

D. Personal convenience, prioritised over any external impact

Correct Answer: Option (B)

Short Explanation:

Reporting hazards, helping accident victims, and reducing unnecessary emissions all reflect the theme of public and environmental responsibility — recognising that individual choices have an impact beyond the individual themselves.

Question 480

What is the recommended frequency for refreshing a roadside emergency kit and checking medical supply expiry dates?

A. Never, once assembled

B. Periodically, to ensure supplies remain usable and complete

C. Only once, at the time of vehicle purchase

D. Only after an emergency has already occurred

Correct Answer: Option (B)

Short Explanation:

A roadside emergency kit should be refreshed periodically, with medical supply expiry dates checked, to ensure it remains genuinely usable when needed.

Question 481

What is the primary goal of the 'Final Road Safety Checklist' presented in this module?

A. To replace all previous modules in this series

B. To consolidate the single most important habit from each earlier module into one practical, repeatable checklist

C. To introduce entirely new legal requirements

D. To serve only as a reference for professional drivers

Correct Answer: Option (B)

Short Explanation:

The Final Road Safety Checklist consolidates the single most important habit from each earlier module in this series into one practical, repeatable checklist.

Question 482

What is the recommended approach to emergency numbers, according to this module?

A. Memorise them only, without saving them anywhere

B. Save key emergency numbers in your phone, since memory alone can fail under stress

C. Emergency numbers change too often to be worth saving

D. Only professional drivers need to know emergency numbers

Correct Answer: Option (B)

Short Explanation:

Saving key emergency numbers in your phone is recommended, since relying on memory alone can be unreliable under the stress of an actual emergency.

Question 483

What does this module suggest about the relationship between short trips and safety gear?

A. Safety gear is unnecessary for trips under five minutes

B. Safety gear should be worn on every trip, regardless of distance, since risk does not disappear on short trips

C. Only long highway trips require safety gear

D. Safety gear requirements apply only to two-wheelers

Correct Answer: Option (B)

Short Explanation:

This module emphasises that safety gear should be worn on every trip, regardless of distance, since most serious crashes happen on short, familiar routes rather than only long journeys.

Question 484

According to this module, what is the relationship between courtesy-based road etiquette and actual safety outcomes?

A. Etiquette is purely social and has no real safety impact

B. Courteous behaviours, like dipping headlights and signalling, directly help prevent real accidents

C. Etiquette matters only in formal driving tests

D. Etiquette and safety are entirely separate, unrelated concepts

Correct Answer: Option (B)

Short Explanation:

Courteous behaviours such as dipping headlights unprompted and signalling clearly directly help prevent real accidents, showing that etiquette and safety outcomes are closely connected.

Question 485

A newly licensed driver wants to become a responsible road citizen but feels overwhelmed trying to remember everything from all ten modules of this series at once. What approach does this capstone module recommend?

A. Attempt to memorise and apply every single rule perfectly from day one

B. Start with the consolidated Final Road Safety Checklist and build habits gradually, one at a time, rather than trying to master everything immediately

C. Give up on applying the material until formally retested

D. Focus only on the legal minimum required to avoid fines

Correct Answer: Option (B)

Short Explanation:

This capstone module specifically recommends starting with the consolidated Final Road Safety Checklist and building habits gradually, one at a time, rather than attempting to master everything from the entire series immediately.

Question 486

What is the recommended action regarding dashboard warning lights, as reinforced in this module?

A. Ignore them if the vehicle still seems to run normally

B. Address them promptly rather than ignoring them

C. Only address them during the annual fitness test

D. Dashboard warning lights are purely decorative

Correct Answer: Option (B)

Short Explanation:

Dashboard warning lights should be addressed promptly rather than ignored, since they often indicate developing issues that can affect vehicle safety if left unresolved.

Question 487

What role does 'preparedness' play in this module's overall framework?

A. Preparedness is only relevant during an active emergency, not before one

B. Preparedness means having tools, knowledge, and a plan ready before an emergency occurs, not scrambling to prepare after one begins

C. Preparedness is the sole responsibility of emergency services, not individual citizens

D. Preparedness only applies to commercial vehicle operators

Correct Answer: Option (B)

Short Explanation:

Preparedness, as framed in this module, means having tools, knowledge, and a plan ready before an emergency occurs, rather than trying to prepare only once an emergency has already begun.

Question 488

What is the significance of encouraging rather than criticising others who are building their own road safety habits?

A. It has no real significance for road safety outcomes

B. Supportive encouragement helps sustain positive habit-building, aligning with the module's public responsibility theme

C. Criticism is always more effective at changing behaviour

D. This guidance applies only to professional driving instructors

Correct Answer: Option (B)

Short Explanation:

Encouraging rather than criticising others reflects the module's public responsibility theme, recognising that supportive attitudes help sustain positive habit-building across the wider road-user community.

Question 489

A transport authority wants to design a public campaign inspired by this capstone module's core message. Which tagline best captures its central theme?

A. 'Perfect driving is the only acceptable standard'

B. 'Small, consistent habits — checked and repeated daily — are what actually keep roads safe'

C. 'Road safety is solely the government's responsibility'

D. 'Only new drivers need to worry about road safety habits'

Correct Answer: Option (B)

Short Explanation:

The capstone module's central theme is that small, consistent habits — checked and repeated daily, not perfection or one-time learning — are what actually translate road safety knowledge into real protection.

Question 490

What is the recommended action if a driver notices they are close to a habit becoming 'automatic', such as always dipping headlights unprompted?

A. Stop practising it once it feels automatic, since the goal has been reached

B. Continue the habit consistently and consider adding the next habit to build upon it

C. Automatic habits no longer need any attention at all

D. Revert to inconsistent practice to test if the habit was truly learned

Correct Answer: Option (B)

Short Explanation:

Once a habit feels automatic, the recommended next step is to continue it consistently while adding the next habit to build upon it, following the module's one-habit-at-a-time approach.

Question 491

What does this module suggest is the real 'destination' of the entire JanGyan Road Safety series?

A. Passing a final examination

B. The daily, repeated choice to put safety first, for oneself and others sharing the road

C. Memorising every legal section number precisely

D. Achieving a perfect driving record with zero errors

Correct Answer: Option (B)

Short Explanation:

The conclusion of this capstone module frames the real destination of the series as the daily, repeated choice to put safety first, for oneself and everyone sharing the road.

Question 492

What is the suggested first step in becoming a more responsible road citizen over time?

A. Attempting to change every habit at once immediately

B. Starting with one habit at a time and letting it become automatic before adding another

C. Waiting until a serious incident occurs before making any changes

D. Relying entirely on vehicle technology instead of personal habits

Correct Answer: Option (B)

Short Explanation:

The suggested first step is to start with one habit at a time, letting it become automatic before adding the next, building a sustainable foundation gradually.

Question 493

What combination of factors does this module identify as making up a genuinely 'responsible' road user?

A. Only strict legal compliance, with nothing else required

B. Legal compliance, personal safety habits, courtesy toward others, and awareness of wider impact, combined consistently

C. Only advanced driving skill, regardless of courtesy or legal compliance

D. Only a clean traffic violation record, regardless of other behaviour

Correct Answer: Option (B)

Short Explanation:

This module identifies a responsible road user as one who consistently combines legal compliance, personal safety habits, courtesy toward others, and awareness of their wider impact — not any single factor alone.

Question 494

Why does this capstone module deliberately avoid introducing many new legal provisions?

A. Because legal provisions are unimportant to road safety

B. Because it is designed to consolidate and apply the legal framework already covered in detail across the earlier modules of this series

C. Because legal provisions change too frequently to be included

D. Because this module is intended only for legal professionals

Correct Answer: Option (B)

Short Explanation:

This capstone module deliberately consolidates and applies the legal framework already covered in detail across Modules 1 through 9, rather than introducing significant new legal content.

Question 495

Reflecting on the entire ten-part series, which statement best captures why this final module was placed last, rather than first?

A. Because checklists are considered less important than foundational knowledge

B. Because effectively using a consolidated checklist requires first understanding the reasoning and detail behind each individual habit, which the earlier modules provide

C. Because the module contains no genuinely useful content

D. Because it was simply the next available topic in sequence, with no deliberate ordering

Correct Answer: Option (B)

Short Explanation:

Placing this consolidated checklist module last allows it to build on the detailed reasoning and context provided by the earlier modules, so the checklist represents informed, understood habits rather than rules followed without comprehension.

Question 496

What is the suggested response to noticing early signs of vehicle trouble, such as an unusual noise?

A. Ignore it unless the vehicle stops working completely

B. Investigate and address it promptly, rather than waiting for a complete breakdown

C. Only investigate unusual noises if the vehicle is under warranty

D. Unusual noises are rarely worth investigating

Correct Answer: Option (B)

Short Explanation:

Investigating and addressing early signs of vehicle trouble promptly, rather than waiting for a complete breakdown, reflects the preventive approach to vehicle maintenance emphasised in this module.

Question 497

What is the suggested value of revisiting this series' checklists periodically, rather than reading them only once?

A. There is no additional value in revisiting them

B. Periodic review helps reinforce habits and catch any drift back into old, less safe patterns

C. Checklists become outdated after a single reading

D. Revisiting checklists is only useful for new drivers

Correct Answer: Option (B)

Short Explanation:

Periodic review of the checklists helps reinforce good habits and catch any drift back into old, less safe patterns, supporting long-term consistency rather than a one-time effort.

Question 498

How does this module frame the relationship between individual actions and collective road safety outcomes?

A. Individual actions are insignificant compared to government policy alone

B. Individual habits, multiplied across many road users, create measurable, real civic impact

C. Only large-scale infrastructure projects can meaningfully affect road safety

D. Collective outcomes are entirely disconnected from individual behaviour

Correct Answer: Option (B)

Short Explanation:

This module frames individual habits as meaningful precisely because, when multiplied across many road users, they create measurable, real civic impact, as illustrated by campaigns like Delhi's engine-off drive.

Question 499

Considering the entire JanGyan Road Safety & Public Safety series as a whole, which statement best reflects its overall intended outcome for a learner who completes all ten modules?

A. The learner will have memorised every fine amount and legal section number precisely

B. The learner will have both the knowledge and the consistent habits needed to protect themselves and others as informed, responsible road citizens

C. The learner will be legally qualified to work as a traffic police officer

D. The learner will no longer need to follow any traffic rules, having completed the series

Correct Answer: Option (B)

Short Explanation:

The series as a whole, culminating in this capstone module, is intended to leave learners with both the knowledge and the consistent, repeatable habits needed to protect themselves and others as genuinely informed, responsible road citizens.

Question 500

What is the final encouragement given to learners at the conclusion of this capstone module?

A. To forget the series once completed

B. To stay alert, stay disciplined, and treat safety as a daily, repeated choice

C. To only apply these lessons during long-distance travel

D. To rely entirely on future technology rather than personal habits

Correct Answer: Option (B)

Short Explanation:

The module concludes by encouraging learners to stay alert and disciplined, treating safety as a daily, repeated choice — the real, lasting outcome of the entire series.
